The principal possibilities are considered for observing the effects associated with the hypothetical universal "horizontal" interaction. The latter allows to solve, from the common point of view, the problems dialing with the violation of CP invariance and quark-leptonic generations symmetry (e/$\mu$tau-universality). It is shown that the effect of the simultaneous violation of CP invariance and the horizontal symmetry of quark-leptonic generations (and, correspondingly, the e/$\mu$tau-universality), which are caused by the "horizontal" interaction, may be detected, due to its superweak nature, first of all in K/sup 0/-anti K/sup 0/, D/sup 0/-antiD/sup 0/, B/sup 0/-anti B/sup 0/ oscillations as well as in such decays as Ksub(L)sup(0) -> anti $\mu$e; $\mu$ enti e Ksup(+-) -> $\pi$sup(+-)($\mu$e=; D/sup 0/ -> $\mu$ anti e, $\mu$e; B/sup 0/ -> tau/sup +/e/sup -/,.... In this the charge assymmetry of leptonic pairs ($\mu$/sup +/e/sup -/ or $\mu$/sup -/e/sup +/) is conditioned by CP violation not only in reactions with K/sup 0/(D/sup 0/)-mesons, but also in the leptonic sector of the Lagrangian. 33 refs.; 4 figs.

21531 **(IFVE-OTF—85-14) Multiplicity distributions in dual parton model.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1985. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700907.

Submitted to the journal Sov. J. Nucl. Phys. .

The new technique earlier proposed by the authors for hadron production in a string, which takes explicitly into account valence nature of string-forming quarks, is used for calculation of the multiplicity distributions. Such a consideration is shown to improve considerably the description of low-energy multiplicity distributions of charged particles. For superhigh energies, the contribution from the string ends becomes negligible. However, in this case one has to take into account multi-pomeron contributions. 8 refs.; 11 figs.

21532 **(IFVE-OTF—85-48) Gluon structure of hadrons and rise of total cross sections at high energies.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1985. 5p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700908.

The cause of the rise of total cross-sections is discussed from the point of view of their gluon structure. It is pointed out processes of hadron interactions, is evidently, the most natural explanation of the universal character of inclusive distributions discussed for a number of years. 7 refs.

21533 **(IFVE-OTF—85-57) Structure functions and leptonic widths of heavy mesons.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.). 1985. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700909.

The structure functions of mesons containing heavy quarks are related to the values of the wave functions of these mesons. The leptonic decay widths of the mesons are calculated. 6 refs.; 1 fig.

**21534 (IFVE-OTF—85-179) Magnetic moment of W boson in the process e/sup +/+e/sup -/ -> γ + νsub(i) + anti νsub(i): tests of Yang-Mills couplings in the vertex (Wsub( γ)W).** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1985. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700912.

Possibilities to measure W-boron magnetic moment before these particles are really produced, have been considered. For this purpose the cross section for the process e/sup +/e/sup -/ -> γνsub(i)anti νsub(i) (where i=e, μ, tay,...) has been calculated with an account for the diagram (3W) which contains W-boson gyromagnetic ratio gsub(W). The results obtained are valid for not very high energies, since the calculations have been made only in the first order of (s/2Msub(W)sup(2)). 8 refs.; 2 figs.; 1 tab.

**21535 (INIS-SU—386, pp 5-17) Relativistic invariant analysis of correlation phenomena in multiple production processes.** Baldin, A.M.; Didenko, L.A. 1985. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780087. (N—8-85).

In JINR rapid communications. Collection.

A new relativistic invariant method is suggested for the study of correlation phenomena in multiple production processes. The correlation analysis extensively used in literature, which employs, e.g., the longitudinal rapidity variables, is shown to be inconsistent because it neglects the links between the kinematic variables which are of a purely geometric nature. Different two-particle correlations of pions and nuclei extracted from experiment were found to be identical and, in the asymptotic, to be coincident. This is in agreement with the general properties of the hadron distribution formulated earlier by analogy with the Bogolubov correlation depletion principle. 13 refs.; 5 figs.

**21536 (INIS-SU—396, pp 9-18) Analysis of e/sup +/e/sup -/ pair production in experiments with neutral kaons.** Sil'vestrov, L.V. (Joint Inst. for Nuclear Research, Dubna, USSR. Lab. of High Energy). 1986. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780089. (N—14-86).

In JINR rapid communications. Collection.

The anomalous production of e/sup +/e/sup -/ pairs which could not be explaind by the known background processes has been found as a result of the analysis of data registered on the BIS spectrometer in the experiment with neutral kaons. The invariant masses of observed pairs are limited by the M(ee)-<320-340 MeV/c/sup 2/ value. The most probable hypothesis is that the pairs could be applied to unobserved decay of K-mesons. Its relative probability is equal to (2-4)x10sup(-3). 10 refs.; 6 figs.; 2 tabs.

**21537 (INIS-SU—396, pp 19-27) Consideration of quark degrees of freedom in NN-interaction in the framework of boundary condition model (the problem of two and three nucleons).** Efimov, V.N. (Joint Inst. for Nuclear Research, Dubna, USSR. Lab. of Neutron Physics). 1986. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780089. (N—14-86).

In JINR rapid communications. Collection.

The boundary condition model (BC) of NN-interaction with energy dependent BC which has energy pole and coincides with Jaffe-Low P-matrix is considered. The internal wave function has been constructed making allowance for the quality results of quark compound bag (QCB) model. The short-range NN-potential has the structure as in QCB model but its parameters are determined via the phases of NN-scattering. The doublet length asub(2) of nd-scattering and the binding energy of tritium /sup 3/H Esub(T) for a wide interval of b (the radius BC) in the model with the external OPE-potential are calculated. For b=1.196 fm the values a/sub 2/ =0.63 fm and Esub(T)=8030 MeV are obtained that agree well with the experiment (experimental values are a/sub 2/=0.65 -+ 0.05 fm and Esub(T)=8.48 MeV). The results of this work may be considered as the first successful attempt of a joint calculation of the three-nucleon parameters a/sub 2/ and Esub(T) for the OPE-potential in the model which takes into account the quark degrees of freedom. 13 refs.; 1 tab.

In JINR rapid communications. Collection.

The quantization in Skyrme model with broken chiral symmetry is performed by the method of collective variables. The collective variables correspond to vibrations and rotations of skyrmions. The computed mass spectra show the energy degeneracy of some states. 6 refs.; 1 tab.

**21539 (INIS-SU—398, pp 37-42) Gluonium production in hadronic processes.** Duplij, S.A. 1985. (In Russian). NTIS (US Sales Only), PC A05/MF A01. File Number DE87780090.

In Problems of nuclear physics and cosmic rays. No. 23. Republican Interinstitute scientific technical collection.

Production of large-psub(t) scalar (O/sup ++/) and pseudoscalar (O/sup +-/) glueballs in hadronic collisions is investigated. The contribution of subprocesses q anti q -> Gg, gq->Gq, gg->Gg i s taken into account. The analysis is provided by using the helicity formalism. Helicity amplitudes and differential cross sections of glueball production for various beams and targets are obtained. It is shown that mechanisms considered lead to linear polarization of the final gluon jet, even if initial particles are unpolarized. For this case a density matrix of the final gluon is obtained. This sign of the polarization depends on th parity of the glueball and opposite for subprocesses q anti q ->Gg and gg->Gg. 6 refs.

**21540 (INIS-SU—399, pp 28-30) Confinement effect on gluon jet properties in a model of classical currents.** Nazirov, M.T. 1986. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE87780091.

Kratkie Soobshcheniya po Fizike. No. 4.

In Experimental and theoretical data. Collection.

The processes of formation of gluon jets in hadron-hadron interactions are studied in the framework of the model of classical currents. Properties of gluon radiation by quarks are discussed in the model, where screening of quark color current is described by classical current acting on a finite length. Consideration of quark momentum distribution inside on incident hadron results in rather reasonable values for different characteristics of gluon (and, consequently hadron) jets with a fixed angle of escape. 3 refs.; 2 tabs.

**21541 (ITEP—77(1985)) Four-quark states in the heavy quark system.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 39p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87700988.

Four-quark states Rsub(4q)=anti qanti qqq in a heavy quark system are considered in the framework of the potential model. A special attention is paid on the possibility of observing such states in a direct channel in e/sup +/e/sup -/ annihilation. It is shown that in the system anti canti ccc there must exist a resonance with Jsup(PC)=1sup(--), spin S=2, the mass M approximately 6.75 GeV, the electron width GITAsub(esup(+)esup(-)) approximately 0.02 eV and the total width GITAsub(tot) approximately 10 MeV. For analogous state in the systems anti cantiscs and anti santi sss are obtained Msub(anti canti scs) approximately 4.8 GeV, GITAsub(esup(+)esup(-)) approximately 0.4 eV and Msub(anti santi sss) approximately 2.7 GeV, GITAsub(esup(+)esup(-)) approximately 3 eV. The decay modes of such states and possibilities of their observation are discussed. The masses of C-even 4-quark states are also calculated, their 2γ decay widths and the probabilities of charmonium and upsilonium radiative decays into these states are estimated. 25 refs.; 4 figs.; 2 tabs.

**21542 (ITEP—82(1985)) P-matrix analysis of the ΛN -> ΣN system and the nature of the hadron peak near the ΣN threshold.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700989.

A P-matrix analysis of the low-energy ΛN-ΣN interactions is presented. The bag-model eigenstates in the ϵN channel are washed out by the coupling to the hadronic channels. The P-matrix analysis necessarity results in the narrow peak at the ΣN threshold. The corresponding pole may be associated with the background term of the P-matrix. This pole is classified as the inelastic virtual state of the SIGMAN system. 32 refs.

21543 **(ITEP—84(1985)) Coulomb corrections in the low-energy scattering.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 42p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87700990.

Renormalization of the coefficients of the "effective range expansion" is considered for the short-range Coulomb problem. The exactly solvable model of the Coulomb plus short range potential is considered. Exact solutions are compared with approximations frequently used in the theory of hadronic atoms. 33 refs.; 7 figs.; 3 tabs.

21544 **(ITEP—128(1985)) Preasymptotical corrections to the pomeron exchange.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 21p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700992.

IN the frame of quark-gluon model for strong interactions, based on the topological expansion and string model, the planar diagrams are connected with Regge poles and the cylinder diagrams correspond to the pomeron. In earlier works it was shown that in this approach strong exchange degeneracy has to take place. This fact in the case of the pomeron with intercept αsub(D)(O)>1 is in disagreement with experiment. In the present paper the preasymptotical corrections to the pomeron exchange are calculated. It is shown that these corrections remove the dissagreement. 12 refs.; 7 figs.

21545 **(ITEP—135(1985)) Quadrupole moments of hadrons.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 18p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700993.

In chiral bag model an expression is obtained for the quark wave functions with account of color and pion interaction of quarks. The quadrupole moments of nonstrange hadrons are calculated. Quadrupole moment of nucleon isobar is found to be Q(Δ)=-6.3x10/sup -28/ esub(Δ)(cm)sup(2). Fredictions of the chiral bag model are in strong disagreement with the non-relativistic quark model. 33 refs.

21546 **(ITEP—141(1985)) On the possibility of non-weak interactions of neutrinos.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700995.

The aim of this paper is to raise a point concerning the possibility of a generalization of the standard electroweak theory which provides neutrinos with specific strong interaction and at the same time preserves the renormalizability of the theory. As an example the interaction of the neutrinos with a hypothetical neutral isosinglet scalar boson is considered. Experimental implications of the model are discussed. 14 refs.; 10 figs.

21547 **(LPC—83-01) Direct-photon pair production.** Carimalo, C.; Crozon, M.; Kessler, P.; Parisi, J. (College de France, 75 - Paris. Lab. de Physique Corpusculaire). Feb 1983. 27p. (CONF-821252—2). NTIS (US Sales Only), PC A03/MF A01. File Number DE87750986.

From Seminar on /gamma gamma/-physics; Montpellier, France (9 Dec 1982).

This paper recalls some general aspects of direct-photon pair production at large Psub(T) in hadron collisions: The basic process qantiq→γγ; contributions from gg→γγ (via the quark box); possible resonant contributions; background problems due to indirect photons. A recent experiment performed at the ISR is finally described.

21548 **Towards a resolution of certain dilemmas in preon dynamics through local supersymmetry.** Pati, J.C.; Cveti, M.; Sharatchandra, H.S. (Department of Physics and Astronomy, University of Maryland, College Park, Maryland 20742). *Physical Review Letters;* **58**: No. 9, 851-854(2 Mar 1987).

A resolution of one of the major dilemmas of preon dynamics, i.e., why (m/sub q/,m/sub l/)<<(1/r₀)equivalentΛ₀, is provided. In a class of models, supersymmetry (SUSY) in its local rather than global form permits a breaking of SUSY and also a generation of composite-fermion masses, but both with a severe damping by powers of (Λ₀/M/sub Planck/).

21549 **On the existence of stable dimesons.** Heller, L.; Tjon, J.A. (Theoretical Division, Los Alamos National Laboratory, University of California, Los Alamos, New Mexico 87545). *Physical Review* [*Section*] *D: Particles and Fields;* **35**: No. 3, 969-974(1 Feb 1987).

The bound-state problem of two quarks and two antiquarks with coupled channels in color space is studied, using a potential as derived from the MIT bag model. For equal quark and antiquark masses no stable bound state is supported, while for large enough mass ratio a true four-quark bound state is found. The effect of a running coupling constant in the Coulomb part of the potential is studied.

21550 **Pion-nucleon bremsstrahlung and Δ electromagnetic moments.** Heller, L.; Kumano, S.; Martinez, J.C.; Moniz, E.J. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review* [*Section*] *C: Nuclear Physics;* **35**: No. 2, 718-736(Feb 1987). Contract AC02-76ER03069.

A dynamically consistent, gauge invariant model for πN bremsstrahlung is developed. The πN dynamics are described through an isobar model fit to the experimental phase shifts. The charge and current operators are constructed in a gauge invariant fashion and include contributions from interaction currents at the πNΔ vertices and from the bare Δ electromagnetic moments. The meaning of such moments for an unstable particle is discussed in detail. From a fit to the $\pi^+$p bremsstrahlung data, we extract a dipole moment for the bare Δ/sup + +/ in the range μ/sub Δ//sub =//μ/sub p/≃2.5 to 3.5; if the contributions from internal pion and nucleon currents are included, this ratio is somewhat smaller. The $\pi^-$p bremsstrahlung data are consistent with a broad range of values for μ/sub Δ//sub =/, including μ/sub Δ//sub =/ = 0. The Δ quadrupole moment cannot be extracted meaningfully from the data. We discuss the sensitivity of the extracted values of μ/sub Δ/ to the off-shell extension of the πN scattering amplitude. The polarization asymmetry is found to be sensitive to μ/sub Δ/ while being less sensitive to off-shell scattering.

21551 **Vacuum energy and dilaton tadpole for the unoriented closed bosonic string.** Grinstein, B.; Wise, M.B. (California Institute of Technology, Pasadena, California 91125). *Physical Review* [*Section*] *D: Particles and Fields;* **35**: No. 2, 655-659(15 Jan 1987).

In oriented-closed-bosonic-string theory a dilaton tadpole (and vacuum energy) first develops at the one-loop level from performing the path integration over manifolds with the topology of the torus. We show that in the case of the unoriented closed bosonic string the leading contribution to the dilaton tadpole arises at the tree level from the path integral over manifolds with the topology of the projective plane. We explicitly compute the vacuum energy and the dilaton tadpole using Polyakov's formulation of string theory.

21552 **Effect of transmission through the Earth on neutrino oscillations.** Baltz, A.J.; Weneser, J. (Physics Department, Brookhaven National Laboratory, Upton, New York 11973). *Physical Review* [*Section*] *D: Particles and Fields;* **35**: No. 2, 528-535(15 Jan 1987). Contract AC02-76CH00016.

Large transformation and regeneration phenomena are calculated to result from transmission through the Earth of neutrinos whose $E(MeV)/\Delta m^2(eV^2)$ lie in the vicinity of $10^6$—$10^7$. As a result large time-of-night and seasonal variations are predicted for solar neutrinos in this parameter range.

21553 **Strong-interaction contributions to one-loop leptonic processes.** Lynn, B.W.; Penso, G.; Verzegnassi, C. (Stanford Linear Accelerator Center, Stanford University, Stanford, California 94305). *Physical Review* [*Section*] *D: Particles and Fields;* **35**: No. 1, 42-50(1 Jan 1987). Contract AC03-76SF00515.

We classify all strong-interaction contributions to all four-lepton processes through one loop in electroweak $SU_2 \times U_1$ and to all orders in strong interactions. We show that those parts which are not reliably calculated in perturbative QCD are all related to a certain integral over the total cross section for $e^+e^- \rightarrow$hadrons at low energies. We evaluate this integral for the most recent data and find that, for most four-lepton processes of interest, it is dominated by the timelike chemical bondq'²chemical bond region from 1 to 100 GeV². We show that the associated theoretical strong-interaction uncertainty is a factor of —2 smaller than previously published estimates. We give the strong-interaction contribution and associated theoretical uncertainty for future SLAC, CERN, and Fermilab precision experiments and show that the theoretical uncertainty is quite small, thus allowing precision tests of the electroweak theory at the one-loop level.

21554 **Helicity projection techniques for evaluating cross sections of heavy-fermion production and decay via W bosons.** Barger, V.; Ohnemus, J.; Phillips, R.J.N. (Physics Department, University of Wisconsin, Madison, Wisconsin 53706). *Physical Review* [*Section*] *D: Particles and Fields;* **35**: No. 1, 166-172(1 Jan 1987).

We discuss and illustrate the application of density-matrix techniques in the helicity basis for the tree-level production and decay of heavy fermions, via real or virtual W bosons. Both Drell-Yan and O(α/sub s/) QCD production processes for W production are considered, with W→Lnu-bar/sub L/ and subsequent L and nu-bar/sub L/ decays, where L and nu-bar/sub L/ denote heavy fermions with no strong interactions (such as lepton and neutrino or W gaugino and photino). Compact expressions are given for the complete production/decay cross sections at the parton level, including possible multistage cascade decays.

21555 **Statistical analysis in new-particle searches.** Gunion, J.F.; Soper, D.E. (Physics Department, University of California, Davis, California 95616). *Physical Review* [*Section*] *D: Particles and Fields;* **35**: No. 1, 179-193(1 Jan 1987).

We describe methods that may be used to analyze the statistical certainty to be associated with a signal for a new particle, taking the Higgs boson as an example. We suppose that one is looking for a certain signal that the new particle is produced and decays (for example, Higgs-boson production followed by decay into $W^+W^-$ with one W→jets and one W→$\mu\nu$). We also suppose that there are calculated cross sections for the signal and for the corresponding background. We address two problems. First, how can one estimate the expected statistical significance of the result of a future experiment utilizing this signal? Second, what is a good way to analyze the data when the experiment is done? We use standard statistical methods, emphasizing a simple formulation of the problems addressed. Examples from the recent literature concerning Higgs-boson production at the Superconducting Super Collider are given.

21556 **Cross section for hard processes involving two quarks and four gluons.** Parke, S.J.; Taylor, T.R. (Fermi National Accelerator Laboratory, P.O. Box 500, Batavia, Illinois 60510). *Physical Review* [*Section*] *D: Particles and Fields;* **35**: No. 1, 313-325(1 Jan 1987).

The cross section for hard processes involving two quarks and four gluons is given in a form suitable for fast numerical calculations.

21557 **Symmetric, Lorentz invariant NN amplitude: Yukawa representation.** Tjon, J.A.; Wallace, S.J. (Institute for Theoretical Physics, 3508 TA Utrecht, The Netherlands). *Physical Review* [*Section*] *C: Nuclear Physics;* **35**: No. 1, 280-297(Jan 1987).

Previous work on the general representation of NN scattering amplitudes in the full Dirac space of two nucleons is extended to allow a simple realization of the generalized Pauli principle. New kinematic covariants are found which are linearly independent and which have simple particle exchange symmetries. This permits a representation in which all invariant amplitudes are even or odd with respect to interchange of initial state four-momenta or interchange of final state four-momenta for on-mass-shell kinematics. When parity invariance, charge symmetry, and time-reversal invariance are taken into consideration, it is found that for each isospin state there are 56 independent amplitudes for off-mass-shell kinematics, 50 independent amplitudes for quasipotential kinematics, and 44 independent amplitudes for on-mass-shell kinematics. A relativistic meson exchange model is used to calculate the invariant amplitudes for on-mass-shell kinematics, and the resulting amplitudes are fit by sums of Yukawa terms. The analysis provides complete sets of Feynman invariant amplitudes for 200, 500, and 800 MeV NN scattering.

21558 **Concluding remarks and outlook.** Chau, L.L. (Brookhaven National Lab., Upton, NY). pp 761-767 of Flavor mixing in weak reactions. Chau, L.L. (ed.). New York, NY; Plenum Publishing Corporation (1985).

The author reviews recent achievements in weak interactions. Topics mentioned are the measurement of the b lifetime and other constraints on the quark mixing matrix and data on CP violation. The outlook in the near future for weak interaction physics is outlined. The author concludes with some comments on historical aspects of the construction of unified theories with special reference to supersymmetry.

21559 **Some thoughts on searches for proton decay.** Goldhaber, M. (Brookhaven National Lab., Upton, NY). pp 475-479 of Flavor mixing in weak reactions. Chau, L.L. (ed.). New York, NY; Plenum Publishing Corporation (1985).

Several general aspects of proton decay experiments are considered. It is pointed out that there is currently a gap between proton lifetime as determined by experiment and as predicted by theory. Ideal detectors, event identification and discrimination from background and reproducibility of results are discussed. Finally the author suggests the possibility of p/n asymmetry in reported events.

21560 **Estimate of $p + d \rightarrow {}^3He\ e^-e^+$ cross section at T/sub p/=450 MeV.** Prats, F.; Briscoe, W.J. pp 285-286 of Few body problems in physics. Vol.II. Zeitnitz, B. Amsterdam, Netherlands; Elsevier Science Publishers B.V. (1984).

The cross section for the pd capture into $^3$He with emission of an electron-positron pair has been estimated assuming an amplitude given by a Feynman diagram. It is found that the cross section for pair production is at least six orders of magnitude smaller than the radiative capture cross section and, therefore, can make no significant contribution to $d(p,\gamma)^3$He differential cross sections obtained in that experiment.

21561 **Speculations concerning high-energy large momentum transfer processes.** Wu, T.T.; Yang, C.N. (Brookhaven National Lab., Upton, NY). pp 365-368 of Selected papers 1945-1980 - with commentary. Chen Ning Yang. San Francisco, CA; W.H. Freeman and Company (1983).

Reprinted from Physical Review; 137: No.3B, B708-B711(8 Feb 1965).

It is speculated that the sharp decrease with increasing energy of differential cross sections at large angles is due to a mechanism independent of the method of excitation. Some consequences of such a possibility are discussed. 1 figure.

**21562 Geometrical model of hadron collisions.** Chou, T.T.; Yang, C.N. (Univ. of Georgia, Athens). pp 559-562 of Selected papers 1945-1980 - with commentary. Chen Ning Yang. San Francisco, CA; W.H. Freeman and Company (1983). Contract AS09-76ER00946.

Reprinted from Proceedings of the 1980 Guangzhou Conference on Theoretical Particle Physics; 317-326(1980).

Results obtained from the geometrical model for high energy hadron-hadron and hadron-nucleus collisions are summarized. The discussion is focused on elastic scattering, diffraction dissociation process and the concept of matter current distribution inside a polarized hadron or nucleus.

## 6453 Particle Invariance Principles And Symmetries

*REFER ALSO TO CITATION(S) 21548, 21594, 21604*

**21563 (DOE/ER/40200—088) Quasi-invariance and central extensions.** Marmo, G.; Morandi, G.; Simoni, A.; Sudarshan, E.C.G. (Texas Univ., Austin (USA). Center for Particle Theory). Feb 1987. Contract FG05-85ER40200. 22p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006234.

The free particle with equations of motion invariant under the ten-parameter Galilei group, but with its Lagrangian only quasi-invariant, changing by a total time derivative, is discussed. An example is considered where the Lagrangian is quasi-invariant, and it is shown how that gives rise to a central extension of the Euclidean group E(2). The corresponding problem is then considered on phase space where a problem arises because the kinematics and the dynamics, both carried by the Lagrangian function, now are separately associated with the Poisson Brackets and the Hamiltonian function. The rise of central extensions are shown here too. An example is exhibited where central extensions are trivial and therefore strictly invariant Lagrangians can be defined. (LEW)

**21564 (EFI—815(42)-85) Quantum geometry of covariant superstring with N=1 global supersymmetry.** (Erevanskij Fizicheskij Inst. (USSR)). 1985. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700863.

Quantization of superstring with N=1 global supersymmetry in continual integration formalism is considered. It is shown that integral over anticommuting variables is determined by conformal anomaly of induced metric. The total effective action is a combination of a string action and that of Liouville model. 12 refs.

**21565 (EFI—817(44)-85) Supersymmetry and intermediate symmetry breaking in SO(10) superunification.** (Erevanskij Fizicheskij Inst. (USSR)). 1985. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701364.

A scheme of simultaneous breakdown of intermediate symmetry SO(10) -> SU(3)sub(c) x U(1) x SU(2)sub(L) x SU(2)sub(R) and supersymmetry by means of a single scale parameter is suggested. This intermediate symmetry, which is preferable physically, owing to the broken supersymmetry has a minimum lying lower than SU(4) x SU(2)sub(L) x SU(2)sub(R). The intermediate symmetry is broken by the vacuum expectation value of the Higgs superfields. Owing to the quantum corrections the potential minimum turns out to correspond to breakdown of the intermediate symmetry up to the standard group SU(3)sub(c) x SU(2)sub(L) x U(1)sub(y). The value of the Weinberg angle is less than that in the supersymmetric SU(5) model and agrees with the experiment. 13 refs.; 2 figs.

**21566 (IC—86/4) Symmetries and a hierarchy of the general modified KdV equation.** (International Centre for Theoretical Physics, Trieste (Italy)). Jan 1986. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701369.

Two groups of symmetries and their Lie algebra property of the modified KdV equation are extended to the general modified KdV equation and the Miura transformation between the general KdV equation and the general modified KdV equation is also established. 8 refs.

**21567 (IC—86/6) Stable harmonic maps from complete manifolds.** (International Centre for Theoretical Physics, Trieste (Italy)). Jan 1986. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701374.

By choosing distinguished cross-sections in the second variational formula for harmonic maps from manifolds with not too fast volume growth into certain submanifolds in the Euclidean space some Liouville type theorems have been proved in this article. 9 refs.

**21568 (IC—86/56) Light gluinos and CP violation.** (International Centre for Theoretical Physics, Trieste (Italy)). Apr 1986. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701370.

It is shown that SUSY models with light gluinos, in contrast to the heavy gluino scenario, have the right amount of flavour mixing in the down squark mass matrix to explain naturally the observed $\epsilon$ parameter even for low top mass (m/sub t/ approx = 40 GeV) and long bottom life (tau/sub B/> or approx 1 ps). Implications for $\epsilon'/\epsilon$ and B/sup o/-B/sup -o/ mixing are discussed. 27 refs, 1 tab.

**21569 (IC—86/57) Renormalizable N=2 supersymmetric and gauge invariant interactions from the N=2 harmonic superspace with central charges.** (International Centre for Theoretical Physics, Trieste (Italy)). Apr 1986. 27p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87701371.

The N=2 harmonic-superspace in the presence of central charges is developed. Renormalizable interactions unusual in N=2 supersymmetric theories, are derived in a consistent way. Symmetries generated by the central charges are discussed. A certain equivalence between N=2 harmonic superspace with and without central charges is established. A non-abelian generalization of the model is given. 26 refs.

**21570 (IC—86/58) On the renormalizable interactions of the N=2 Maxwell and scalar multiplets in the N=2 harmonic superspace.** (International Centre for Theoretical Physics, Trieste (Italy)). Jun 1986. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701372.

We work out the renormalizable local U(1) and global SU(2) invariant interactions in the N=2 harmonic superspace. A convenient invariant gauge choice is introduced. 15 refs.

**21571 (IC—86/59) N=2 SQED in the N=2 harmonic-superspace.** (International Centre for Theoretical Physics, Trieste (Italy)). Jun 1986. 23p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701373.

We study in the Harmonic Superspace an N=2 supersymmetric U(1) gauged model based on the interaction of a massive Fayet-Sohnius hypermultiplet and a gauge multiplet. This model has an extra symmetry which, when gauged away, reproduces the N=2 SQED. The Fayet-Iliopoulos mechanism is used to break the N=2 supersymmetry down to N=0 in a covariant way. Other features are discussed. 15 refs.

**21572 (IC—86/60) Spontaneous N=2 supersymmetry breaking in the N=2 harmonic superspace a la Fayet-Iliopoulos.** (International Centre for Theoretical Physics, Trieste (Italy)). Jun 1986. 24p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701375.

The spontaneous N=2 supersymmetry breaking in a hyper PHI/sup 3/ model is studied. Some special features such as the possibility of an inverse Higgs mechanism are analysed in a covariant framework. 18 refs, 4 figs.

**21573 (IC—86/63) Constraints on the squark mass matrix from CP-violation and SUSY predictions for the B/sup o/ - B/sup o/-bar systems.** (International Centre for Theoretical Physics, Trieste (Italy)). Apr 1986. 21p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701376.

The parameters c and A of the squark mass matrix, which control flavour violation and left-right mixing respectively, are constrained by fitting $\epsilon$ and $\epsilon'$. The predictions for mixing and CP-vio-

lation in the B/sup o/ - B/sup o/-bar system are calculated and then compared with both the predictions of the standard model and the available experimental data. 40 refs, 2 figs, 2 tabs.

21574 **(IC—86/65) Behaviour of coupling constants at high temperature in supersymmetric theories.** (International Centre for Theoretical Physics, Trieste (Italy)). Apr 1986. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701377.

An analysis is presented of the temperature dependence of the coupling constants using the improved one-loop approximation in the Wess-Zumino model and the supersymmetric O(N) model. It is found that all the coupling constants, both bosonic (PHI/sup 4/ type) and Yukawa, approach constant nonzero values as T->∞. The asymptotic values of the bosonic couplings are slightly smaller than the corresponding zero-temperature values, and those of the Yukawa couplings are the same as the zero-temperature values. 10 refs, 1 fig.

21575 **(IC—86/73) (4,O) heterotic string with Wess-Zumino term.** (International Centre for Theoretical Physics, Trieste (Italy)). May 1986. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701378.

The covariant SU(2) spinning string model of Pernici and van Nieuwenhuizen which has (4,4) supersymmetry is chirally truncated to a (4,0) model. The model is extended by the addition of a locally supersymmetric Wess-Zumino term, and heterotic fermions. This system is coupled to composite as well as fundamental Yang-Mills gauge fields. 19 refs.

21576 **(IC—86/81) On the functional Lie-Baecklund symmetries for one-dimensional gas dynamics.** (International Centre for Theoretical Physics, Trieste (Italy)). Jun 1986. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701379.

We have analysed the equations of one-dimensional gas dynamics from the point of view of the Lie-Baecklund transformation. The important outcome of our analysis is that these extended symmetry transformations can have arbitrary functional form in terms of jet variables. Both the cases of coupled and decoupled sets of equations have been considered. 3 refs.

21577 **(IC—86/94) Extended Poincare supersymmetry.** (International Centre for Theoretical Physics, Trieste (Italy)). May 1986. 40p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87701380.

Supersymmetric extensions of the Poincare algebra in D-dimensional space-time are reviewed and a catalogue of their representations is developed. This catalogue includes all supermultiplets whose states carry helicity <2 in the massless cases and <=1 in the massive cases. 3 refs, 6 tabs.

21578 **(IC—86/115) Global anomalies in six dimensions.** (International Centre for Theoretical Physics, Trieste (Italy)). Jun 1986. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701365.

Applying Witten's formula for global gauge and gravitational anomalies to six dimensional supergravities, we find: (a) The perturbatively anomaly free N=4 chiral supergravity coupled to 21 tensor multiplets is global anomaly free for any choice of spacetime manifold with vanishing third Betti number (b/sub 3/). (b) The perturbatively anomaly free matter coupled N=2 chiral supergravities with arbitrary number of tensor multiplets, whose Yang-Mills gauge groups do not include G/sub 2/, SU(2), or SU(3) are free of global anomalies if the theory is formulated on S/sup 6/. In the case of 9 tensor multiplets coupled to supergravity this result holds for any spacetime with vanishing b/sub 3/. (c) The N=6 chiral supergravity has perturbative gravitational anomalies, and therefore the global anomalies need not be considered in this case. 26 refs.

21579 **(IC—86/123) Characters of the irreducible highest weight modules over the Virasoro and super-Virasoro algebras.** (International Centre for Theoretical Physics, Trieste (Italy)). Jun 1986. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701366.

The characters of all irreducible highest weight modules over the Virasoro algebra and the N=1 super-Virasoro algebras (i.e. Neveu-Schwarz and Ramond superalgebras) are given in an explicit and unified for all algebras form incorporating all previously known results. Extensions to the N=2 super-Virasoro case and to the super-Kac-Moody algebra osp(2,2)/sup (1)/ are discussed. 38 refs.

21580 **(IC—86/133) Extension of SU(m) algebra to graded superalgebra.** (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701367.

We consider a method of extending the SU(m) algebra to graded superalgebra based on the use of equal-time canonical commutation relations for matter field operators. 12 refs.

21581 **(IC—86/138) Baryon and lepton number violation in superstring motivated models.** (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701368.

We discuss how realistic low energy physics can arise from the E/sub 8/xE/sub 8/ superstring. A key role is played by the discrete symmetries which typically arise after compactification. Cosmological problems are avoided because the discrete symmetry we employ is shown to effectively be embedded in a Peccei-Quinn symmetry. The models we present seem to satisfy the known phenomenological constraints. In particular, they possess a harmless axion. Implications for baryon and lepton number violation are discussed. 12 refs, 2 figs, 2 tabs.

21582 **Supersymmetric compactification of the heterotic string on coset spaces.** Govindarajan, T.R.; Joshipura, A.S.; Rindani, S.D.; Sarkar, U. (Loyola College, Madras 600 034, India). *Physical Review Letters;* **57**: No. 20, 2489-2492(17 Nov 1986).

Compactification of ten-dimensional $E_8 \times E_8$/sup '/ heterotic string theory on coset manifolds is discussed. It is pointed out that N = 1 supersymmetry can be preserved on $G_2/SU(3)$, SO(5)/SU(2)xU(1), and SU(3)/U(1)xU(1) if gauge-fermion condensation occurs and the third-rank antisymmetric field strength is nonzero. In particular, three generations of chiral fermions can be obtained.

21583 **Epilogue.** Goldhaber, M. (Brookhaven National Lab., Upton, NY). pp 287-290 of Symmetries in particle physics. Bars, I.; Chodos, A.; Tze, C.H. New York, NY; Plenum Publishing Corporation (1984).

The authors have come here tonight for a very happy occasion: to celebrate Feza Guersey's 60th birthday. Yoichiro Nambu told us this morning that someone started this universe by pulling strings. They all agree that this was a good beginning considering that it finally led to Feza. Freeman Dyson in the last talk today told us that there is a long time gap before the work of a man of such depth as Feza is appreciated; clearly they shall have to come back here for his 120th birthday. When Feza makes a grant application to one of the agencies he could say in his modest way: this may show its value in fifty or a hundred years. Feza has been honored many times before, but to be honored right at home is a very special honor indeed, and I hope he will remember that. They all enjoy Feza's success, especially because it disproves Leo Durocher's famous conjecture that nice guys finish last.

21584 **Isotopic spin conservation and a generalized gauge invariance.** Yang, C.N.; Mills, R. (Brookhaven National Lab., Upton, NY). pp 171 of Selected papers 1945-1980 - with commentary. Chen Ning Yang. San Francisco, CA; W.H. Freeman and Company (1983).

Reprinted from Physical Review; 95: 631(1954).

The concept of gauge invariance has been generalized to apply isotopic spin conservation. It turns out that a very natural generalization is possible. The field that plays the role of the electromagnetic field is here a vector field that satisfies a nonlinear equation even in the absence of other fields. (This is because unlike the electromagnetic field this field has an isotopic spin and consequently acts as a source of itself.) The existence of a current density

is automatic, and the interaction of this field with any fields of arbitrary isotopic spin is of definite form (except for possible terms similar to the anomalous magnetic moment interaction terms in electrodynamics).

The 3 x 3 super extended eigenvalue problem is considered. We deduce a class of completely integrable equations. Its reduced forms are given and their infinite conserved currents have been discussed. 7 refs.

21586 **(IC—86/9) Harmonic mapping actions and nonlinear $\sigma$-model.** (International Centre for Theoretical Physics, Trieste (Italy)). Jan 1986. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701360.

Fibre bundle formulations of field theory are considered approximately by the appropriate vector bundle. The fibre vierbein (frame) is considered as dependent indirectly on an element f of the fibre group, which we choose as a harmonic mapping from the base manifold. We do the same for the other fundamental geometrical quantity called the connection, but choose another independent harmonic mapping h instead of f. Additionally, we generalize the torsion-free condition to this more general vector bundle other than tangent bundle, by using the pullback mapping. A new gauge invariant Lagrangian is proposed. 7 refs.

21587 **(IC—86/46) Corrections to the Goldberger-Treiman relation and the QCD condensates.** (International Centre for Theoretical Physics, Trieste (Italy)). Apr 1986. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701357.

The Goldberger-Treiman discrepancy is related to the values of the QCD vacuum condensates. The range of the latter consistent with the experimental value of the former is given. 9 refs, 5 figs.

21588 **(IC—86/83) Spontaneous breaking of global and local symmetries in six-dimensional Einstein-Maxwell-$\sigma$ theory.** (International Centre for Theoretical Physics, Trieste (Italy)). May 1986. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701359.

Higher winding number solutions of the non-linear $\sigma$ field are used to break the global as well as local symmetry of SU(2) in a six-dimensional gravity theory coupled with the U(1) Maxwell and $\sigma$-field. The masses of three gauge bosons are split and their ratios of masses are obtained for various winding numbers. The low-lying states of this model not of Planck scale are a scalar triplet, the graviton, photon, and low mass gauge bosons. 11 refs, 1 tab.

21589 **(IC—86/106) Compactifications and $\theta$-structures in string theories.** (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701354.

Possible topological invariant terms in the first quantization of strings associated with nonzero elements of the second cohomology group of space-time are investigated. The direct result of such terms is C-violation. 12 refs.

21590 **(IC—86/124) Covariant field theory of the interacting string.** (International Centre for Theoretical Physics, Trieste (Italy)). Jun 1986. 23p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701355.

A covariant field theory for the interacting string recently proposed by a Kyoto group is discussed. 15 refs, 5 figs.

21591 **(IC—86/126) Vacuum stability in Kaluza-Klein theories.** (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701356.

When it was discovered that string theories are inconsistent except when they are formulated in spacetimes of either 26 or 10 dimensions, a new reason for investigating dynamical geometry was born. Up to this point the general theory of relativity had stood in isolation. The gravitational force, based as it was in the geometry of spacetime, seemed different from the other "fundamental" forces. It is true that, among the proposals for unification, there was an early suggestion by Kaluza that spacetime should be viewed as a 5-dimensional cylinder in order to put electromagnetism on the same geometrical footing as gravitation. Interesting as it was, this idea was somewhat premature in that many fundamental forces had yet to be discovered. This may yet be the case. If electromagnetism is to be explained by such a mechanism then the distance scales (e.g. the cylinder's radius) must be smaller by many orders than what is experimentally resolvable. This means that the most novel and distinctive qualities of the 5-dimensional geometry, the most characteristic predictions of the theory, cannot be tested. For this reason, the Kaluza-Klein theories have remained for many years a curiosity, and Einstein's theory of gravitation maintains its isolation. 16 refs.

21592 (INIS-SU—398, pp 68-72) **Scale transformations of the affine connection.** Mola, R. 1985. (In Russian). NTIS (US Sales Only), PC A05/MF A01. File Number DE87780090.

In Problems of nuclear physics and cosmic rays. No. 23. Republican Interinstitute scientific technical collection.

Three most wide-spread types of group variety geometry are shown to be obtained as particular cases of the geometry family. Geometries differ from each other by a scale transformation of structure constants and by corresponding re-determination of the multiplication law in the Zee algebra of the Zee group with a constant scale multiplier. Structure equations for all scale-equivalent geometries are obtained. These equations are invariant to general linear transformations of a Zee algebra element, localized in group variety, if in this case the affine connection possesses a gauge transformation law. 7 refs.

21593 **(ITEF—35(1985)) Infrared and collinear divergences in field theory.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 51p. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87700968.

Solution of the problem, related to infrared divergences in quantum electrodynamics (QED), is described in detail. Collinear divergences, leading in a number of cases to the twofold logarithmic amplitude asymptotics, are discussed. Kinoshita-Lee-Nanenberg theorem is formulated. A brief review of situation in quantum chromodynamics (QCD) is made. Kinematic graph structure in QCD is in general similar to that in QED, but there are some significant particular differences, among which the most important one is the violation of soft quantum free emission. "Infrared" ideology allows to describe uniformly such different QCD phenomena as jet formation cross section, scaling violation in deep inelastic scattering Drell-Jahn process at high transverse momenta of a lepton pair and exclusive processes at large momentum transfers. 22 refs.; 23 refs.

21594 **(ITEP—39(1985)) Supersymmetry in a space with auxilliary dimensions.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 52p. NTIS (US Sales Only), PC A04/MF A01. File Number DE87700985.

The purpose of the paper is to clarify geometrical constructions which lead to unconstrained superfields in extended supersymmetry. A geometrical interpretation of constraints in N=2 super Yang-Mills superfield theory is given. Auxiliary variables are introduced. The basic superspace with auxiliary variables, in particular, the isotwistor space, relevant to the N=2 case are described. A reformulation of N=2 super Yang-Mills constrains is constructed in terms of superfields on isotwistor space. 13 refs.

21595 **(ITEP—75(1985)) Beta function in supersymmetric gauge theories. Instantons versus traditional approach.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700987.

Within the background field formalism vacuum loops in supersymmetric gauge theories are discussed. A direct connection is revealed between the absence (or presence) of high order contributions and infrared regularization. A simple explanation is given why the instanton amplitude is exhausted by one loop whilst in the standard supergraph technique the effective action contains terms of all orders in the coupling constant. Exact relation between the Gell-Mann-Low function and anomalous dimensions of matter superfields stemming from the instanton calculus are presented. 7 refs.; 1 fig.

21596 **(ITEP—94(1985)) Quasiperiodical orbits in the scalar classical lambdaphi/sup 4/ field theory.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 25p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700991.

New numerical and theoretical results of resonance kink-antikink (Kanti K) interactions in the classical one-dimentional space Higgs theory are presented. Earlier studies of these interactions revealed nine initial relative velocity-intervals with two-bounce Kanti K-collisions followed by the escape of kinks to infinite separations, the breathing solution was formed outside those intervals. Two-bounce Kanti K-interactions with the number of small oscillations between Kanti K-bounces up to 35 in the initial kink velocity interval 0.18 <= Vsub(infinite) <= 0.26 were found. Several examples for n-bounces Kanti K-interaction (n <= 6) are also found. The observed phenomenon can be explaned by the existence of quasi-two-periodical solutions of the nonlinear wave equation. The simple Hamiltonian with two degrees of freedom is studied. This model supplies quantitative descrtiptions of all numerical results for the field theory considered above. The considered phenomenon may be called "autoquantization" of a nonlinear classical scalar selfinteracting field. 19 refs.; 5 figs.; 2 tabs.

21597 **(ITEP—137(1985)) SUSY non-Abelian gauge models: exact beta function from one loop of perturbation theory.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 18p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700994.

The method for calculating the exact $\beta$ function (to all orders in the coupling constant) proposed earlier in supersymmetric electrodynamics is extended. The starting point is the observation that the low-energy effective action is exhausted by one loop provided that the theory is regularized supersymmetrically both in the ultraviolet and infrared domains in four dimensions. The Pouli-Villars method of the ultraviolet regularization is used. Two methods for the infrared regularization are considered. The first one - quantization in a box with a finite volume L/sup 3/ - is universally applicable to anygauge theory. The second method is based on the effective Higgs mechanism for mass generation and requires the presence of certain matter superfields in the Lagrangian. Within this method the necessary condition is the existence of flat directions, so called valleys, along which the vacuum energy vanishes. The theory is quantized near epsilon non-vanishing value of the scalar field from the bottom of the valley. After calculating the one-loop effective action one and the same exact expression is obtained for the $\beta$ function within the both approaches, and it also coincides with our earlier result extracted from instanton calculus. A few remarks on the problem of anomalies in SUSY gauge theories are presented. 14 refs.

21598 **(ITEP—146(1985)) Operator product expansion and calculation of the two-loop Gell-Mann-Low function.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700996.

A simple method for determining the Gell-Mann-Low function is developed. The method allows one to determine the k-loop coefficient of $\beta$-function in gauge theories provided the operator expansion is constructed in (k-1) loop for certain two-point functions. The calculation of the two-loop coefficient of the Gell-Mann-Low function becomes trivial - it reduces to a few algebraic operations with expressions which are already known. Spinor, scalar and supersymmetric electrodynamics are considered. Although the corresponding results for $\beta$ are known in the literature, both the method of the calculations and some points referring to the construction of the operator expansion are novel. 8 refs.; 3 figs.; 1 tab.

21599 **(ITF—86-23-R) Phase transitions in QCD-thermodynamics on a lattice.** Gorenshtejn, M.I. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1986. 17p. (In Russian). (CONF-8510419—1). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700997.

From 1. All-Union conference computer experiment in quantum field theory; Alma-Ata, USSR (1 Oct 1985).

The problem on temperature phase transitions in lattice gauge theories is briefly reviewed. The most part of the review concerns the gluon QCD sector (i.e. theory consideration without quarks). This restriction is justified as it becomes clear lately that though quark inclusion leads to serious technological difficulties it doesn't change qualitatively the picture of phase transition of deconfinement obtained in the lattice thermodynamics of Yang-Mills fields. 24 refs.; 6 figs.

21600 **(JINR—E-2-86-17) Finite N=1 supersymmetric grand unified theories.** (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1986. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701361.

Submitted to the journal Nucl. Phys., B.

An algorithm to construct N=1 supersymmetric Yang-Mills theories finite in all orders of perturbation theory is proposed. Necessary and sufficient conditions for finiteness are determined already in the one-loop approximation. The class of such theories is wide enough and not exhausted by N=4 or N=2 supersymmetric models. Several examples of finite theories are considered. Finite realistic N=1 supersymmetric grand unified theory is proposed which is based on SU(5) gauge group and contains three fermion families with necessary Higgs multiplets. 18 refs.

21601 **(JINR—R-2-86-16) Auxiliary spectral problem in fermionic string theories.** (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1986. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701362.

The auxiliary spectral problem arising in the fermionic string model is investigated in order to study the fermionic string dynamics in noncompact Lie groups. A complete set of the "action" type variables is obtained and fermionic string reduction to supersymmetry systems with finite-number degrees of freedom is discussed. These results reveal the possibility to construct a correct quantum theory of the fermionic astrings in the space-time of arbitrary dimension. 6 refs.

21602 **(KFKI—1986-29/A) New hypothesis on the nature of quark and gluon confinement.** (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). Jun 1986. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701363.

A new hypothesis of quark confinement is proposed: formation of superbound states in light quark vacuum analogical to the electron states in the field of nuclei about Z 180. The vacuum polarization effect of a heavy antiquark produces a light quark-antiquark pair. If the effective charge of the central particle is greater than a critical value, the new antiquark goes to the infinity and the bounded quark screenes the color field of the central charge. Thus, the colored states are unstable and vacuum polarization produces colorless bound states. A similar effect of gluon instability can explain the structure of mesons with light quarks and antiquarks: the central self-bounded unstable gluon state polarizes and binds a light quark-antiquark pair. Consequences of the new hypothesis on the measurability of color charge, on the structure of baryons and on

the possible experimental verification of the existence of the proposed structures are discussed. (D.Gy.). 4 refs.; 5 figs.

21603 **Scalar Casimir energies in M⁴≧/sup N/ for even** N. Kantowski, R.; Milton, K.A. (Department of Physics and Astronomy, The University of Oklahoma, Norman, Oklahoma 73019). *Physical Review [Section] D: Particles and Fields;* **35**: No. 2, 549-556(15 Jan 1987).

We construct a Green's-function formalism for computing vacuum-fluctuation energies of scalar fields in 4+N dimensions, where the extra N dimensions are compactified into a hypersphere S/sup N/ of radius a. In all cases a leading cosmological energy term u/sub cosmo/proportionala/sup N//b/sup 4+N/ results. Here b is an ultraviolet cutoff at the Planck scale. In all cases an unambiguous Casimir energy is computed. For odd N these energies agree with those calculated by Candelas and Weinberg. For even N, the Casimir energy is logarithmically divergent: u/sub Casimir/—(α/sub N//a⁴)ln(a/b). The coefficients α/sub N/ are computed in terms of Bernoulli numbers.

21604 **On toroidal compactification of heterotic superstrings.** Ginsparg, P. (Lyman Laboratory of Physics, Harvard University, Cambridge, Massachusetts 02138). *Physical Review [Section] D: Particles and Fields;* **35**: No. 2, 648-654(15 Jan 1987).

I comment on the use of background gauge fields and antisymmetric tensor fields in toroidal compactification of heterotic strings, and explicitly construct the background gauge field that interpolates between the $E_8 \times E_8$ and $Spin(32)/Z_2$ theories defined on $R^9 \times S^1$.

21605 **Topologically massive chromodynamics at finite temperature.** Pisarski, R.D. (Fermi National Accelerator Laboratory, P.O. Box 500, Batavia, Illinois 60510). *Physical Review [Section] D: Particles and Fields;* **35**: No. 2, 664-671(15 Jan 1987).

Topologically massive chromodynamics is studied at a finite temperature T. The topological gauge invariance present at T = 0 is argued to remain valid at Tnot =0, but verifying this in the quantum theory is far less direct at Tnot =0 than at T = 0. Debye screening occurs, and has a striking effect on the correlations of static magnetic fields. The behavior of the free energy at high temperature is also computed.

21606 **Effective gauge action on a finite-size lattice.** Bitar, K.M. (Supercomputer Computations Research Institute, Florida State University, Tallahassee, Florida 32306). *Physical Review [Section] D: Particles and Fields;* **35**: No. 2, 691-695(15 Jan 1987).

We present evidence to support the idea that finite-size effects for Monte Carlo simulations of gauge theories on a lattice may be represented by an effective action which could be measured for the particular lattice at hand. For SU(2) lattice-gauge-theory simulations this implies a shift in the coefficients (inverse coupling parameters) of the character expansion of the action being simulated. This shift can be measured and is observed to occur as expected in the crossover region and beyond into the weak-coupling domain.

21607 **Thermodynamic properties of the gluon plasma.** DeGrand, T.A.; DeTar, C.E. (Physics Department, University of Colorado, Boulder, Colorado). *Physical Review [Section] D: Particles and Fields;* **35**: No. 2, 742-747(15 Jan 1987).

We calculate the energy density, pressure, and speed of sound in the deconfined phase of lattice SU(3) gauge theory at finite temperature for lattices of temporal size N/sub t/ = 4, 6, and 8. We compare our results with perturbative QCD at high temperature and with a simple phenomenological model. We also parametrize our results using the "bag" equation of state.

21608 **Gauge theories at finite temperature and chemical potential.** Elze, H.; Miller, D.E.; Redlich, K. (Nuclear Science Division 70A, Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Physical Review [Section] D: Particles and Fields;* **35**: No. 2, 748-752(15 Jan 1987).

The relativistic partition function is studied respecting the internal symmetries. We consider generally the SU(N) gauge theories, and, in particular, the SU(3) symmetry relating to the quark-gluon plasma. The implications of the complex chemical potentials are analyzed and discussed in relation to the lattice gauge theories. It is explicitly shown that the physical partition function is real, which can be obtained from a complex Euclidean partition function by imposing Gauss's law.

21609 **Heat-kernel regularization of gauge theory.** Bern, Z.; Halpern, M.B.; Kalivas, N.G. (Lawrence Berkeley Laboratory and Department of Physics, University of California, Berkeley, California 94720). *Physical Review [Section] D: Particles and Fields;* **35**: No. 2, 753-756(15 Jan 1987). Contract AC03-76SF00098.

We discuss the heat-kernel option in the new covariant-derivative regularization program. The exponential regularization is generally simpler and more systematic than the previously studied power-law regulators. As a result, for example, we are able to verify the vanishing gluon mass in all dimensions at once.

21610 (JINR—D-17-84-850-Vol.2, pp 53-72) **Soliton excitations in a class of nonlinear field theory models.** Makhan'kov, V.G.; Fedyanin, V.K. 1985. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE87780102. (CONF-8408213—Vol.2).

From 3. international symposium on selected topics in statistical mechanics; Dubna, USSR (22 Aug 1984).

Investigation results of nonlinear models of the field theory with a lagrangian are described. The theory includes models both with zero stable vacuum epsilon=1 and with condensate epsilon=-1 (of disturbed symmetry). Conditions of existence of particle-like solutions (PLS), stability of these solutions are investigated. Soliton dynamics is studied. PLS formfactors are calculated. Statistical mechanics of solitons is built and their dynamic structure factors are calculated.

21611 (JINR—D-17-84-850-Vol.2, pp 94-105) **Many-body content of quantum gauge theories and its connection to mass generation mechanisms.** Natoli, C.R.; Palumbo, F. (Istituto Nazionale di Fisica Nucleare, Frascati, Italy. Lab. Nazionale di Frascati). 1985. NTIS (US Sales Only), PC A16/MF A01. File Number DE87780102. (CONF-8408213—Vol.2).

From 3. international symposium on selected topics in statistical mechanics; Dubna, USSR (22 Aug 1984).

The aim of the paper is to get more knowledge about many-body systems and their properties, about many-body content of quantum gauge theories and its connection with mass generation mechanisms. The way to achieve this is to perform the galilean limit of the relativistic theory by sending the speed of light c to infinity. This limiting process exposes the low energy behaviour of the relativistic theory.

21612 (JINR—D-17-84-850-Vol.2, pp 276-280) **Phase transition in the 1+1 dimensional phi/sup 4/ model with fermions.** Fedyanin, V.K.; Osipov, V.A. 1985. NTIS (US Sales Only), PC A16/MF A01. File Number DE87780102. (CONF-8408213—Vol.2).

From 3. international symposium on selected topics in statistical mechanics; Dubna, USSR (22 Aug 1984).

The phase transition with the symmetry restoration in the two-dimensional phi 4-model is studied when the fermions are included. The model is used both in relativistic field theory and in condensed matter physics. The effects due to the fermion-density increase are considered. Calculations are carried out only in the lowest order of perturbation theory.

21613 **Workshop on non-perturbative quantum chromodynamics.** Milton, K.A.; Samuel, M.A. (eds.). Cambridge, MA; Birkhaeuser (1985). 265p.

From review by Geoffrey B. West, Los Alamos National Lab. in Foundations of Physics, Vol. 15, No. 2 (Feb 1985).

The book is a collection of papers presented at a three-day Workshop on Non-Perturbative QCD held in the spring of 1983 at

Oklahoma State University in Stillwater and organized by Kimball Milton and Mark Samuel. Many topics relevant to this subject are covered, though there are some important and potentially serious omissions. These include Borel summability and renormalons (i.e., perturbation theory as an asymptotic series) and the role of the topological structure of the theory (though there is a paper discussing its signature in lattice gauge theory). For those interested in finding out what the current state of some attempts to deal with QCD nonperturbative are, this book is a valuable source. Most of the papers are well written and clear, though addressed to a reasonably knowledgeable expert.

21617 **(BNL-NCS—39162) On-line access to ENSDF [Evaluated Nuclear Structure Data File].** Pearlstein, S. (ed.). (Brookhaven National Lab., Upton, NY (USA)). Jun 1986. Contract AC02-76CH00016. 13p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87006460.

The main purpose of this study is to develop a unified plan to provide users with on-line access to numeric nuclear structure data and provide, in a people readable format, information not published in Nuclear Data Sheets.

21618 **(CEA-CONF—8544) Photonuclear and electronuclear Saclay's activities.** Schuhl, C. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Inst. de Recherche Fondamentale (IRF)). Aug 1986. 10p. (CONF-860866—1; CEA-DPH-N-S—2373). NTIS (US Sales Only), PC A02/MF A01. File Number DE87751039.

From Gordon research conference on photonuclear reactions; Plymouth, NH, USA (4 Aug 1986).

Research is carried at the 700 MeV linear electron accelerator of Saclay (ALS). Among the results obtained these years, we note the most significant ones: the study of the reaction $^3$He($\gamma$,p)np, i.e. the photodisintegration of helium-3 without pion emission, has been developed. At the same time, a method for measuring the reaction $^3$He($\gamma$,pp)n, in which two protons are detected in coincidence, has been improved. The comparison of electron-nucleus and positron-nucleus scattering has just been undertaken. The completion of the detection systems placed in the focal planes of the two high resolution magnetic spectrometers has given an emphasis to the studies of reactions of the type (e,e'p), where the scattered electron and the proton ejected from the nucleus are detected in coincidence.

21619 **(CEA-N—2483) Subthreshold pion production of 20-100 MeV energy with various projectiles (p, $^3$He, $^{12}$C, $^{16}$O).** Sanouillet, G.; Bolore, M.; Charlot, X. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Inst. de Recherche Fondamentale (IRF)). May 1986. 290p. (In French). NTIS (US Sales Only), PC A13/MF A01. File Number DE87751061.

The described experiments refer to pion production below and near the threshold with different projectiles (p, $^3$He, $^{12}$C, $^{16}$O). The pion detection device was a range telescope. Experimental methods are presented and discussed. Data are compared to predictions of some models.

21620 **(DOE/ER—0311) Summaries of FY 1986 research in nuclear physics.** (USDOE Office of Energy Research, Washington, DC. Nuclear Physics Div.). Mar 1987. 193p. NTIS, PC A09/MF A01; 1; GPO Dep. File Number DE87006593.

This report summarizes the research projects supported by the Division of Nuclear Physics in the Office of High Energy and Nuclear Physics, during FY 1986. This Division is a component of the Office of Energy Research, the basic research branch of the US Department of Energy, and provides about 80% of the funding for nuclear physics research in the United States. The objective of the Nuclear Physics program is to understand the interactions, properties, and structures of nuclei and nuclear matter and to understand the fundamental forces of nature as manifested in atomic nuclei. These summaries are intended to provide a convenient guide for those interested in the research supported by the Division of Nuclear Physics.

21621 (INIS-SU—386, pp 18-28) **Study of high energy gamma-rays in heavy ion reactions.** Kamanin, V.V.; Kugler, A.; Mikhajlova, T.I.; Penionzhkevich, Yu.E.; Sobolev, Yu.G.; Yeremin, N.V. 1985. NTIS (US Sales Only), PC A04/MF A01. File Number DE87780087. (N—8-85).

In JINR rapid communications. Collection.

The gamma-spectra up to gamma-ray energy of 20 MeV in coincidence with KX-rays and fission fragments were measured. The reactions induced by /sup 15/N, /sup 22/Ne, /sup 40/Ar ions with E/A=5.5-10 MeV/nucleon leading to the formation of the Yb or Bi compound nuclei were studied. The /sup 130/Te, /sup 150/Te, /sup 150/Nd, /sup 153/Eu, /sup 159/Tb, /sup 181/Ta, and /sup 192/Os targets were used. The gamma-rays were registered by a NaJ(Tl) scintillation detector with phi 150 x 100 mm dimensions. The effective temperature of the gamma-ray spectrum has been determined in the 4 MeV < E < 12 MeV range and its dependence on the projectile mass has been established. Broad bumps have been oserved in the E > 12 MeV energy region. The possible correspondence between these bumps and the gamma-decay of giant dipole resonance built on highly excited states of compound nuclei and projectiles is discussed. 19 refs.; 5 figs.; 1 tab.

21622 (INIS-SU—386, pp 29-37) **Ratio of cumulative pion yields of different sign in proton-nucleus interaction at the proton energy from 17.5 to 63 GeV.** Belyaev, I.M.; Gavrishchuk, O.P.; Zolin, L.S.; Karev, A.G.; Lobanov, V.V.; Sukhanov, A.Yu. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki; Joint Inst. for Nuclear Research, Dubna, USSR). 1985. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780087. (N—8-85).

In JINR rapid communications. Collection.

The data of the investigation of ratio of yields of cumulative pions of different sign are presented. Results are presented of a study of the ratio of the yields of $\pi$/sup +/ and $\pi$/sup -/ mesons at 159 deg angle in the p+/sup 90/Mo -> $\pi$sup(+-)+X reaction for 17.5<=Esub(p)<=63 GeV proton energy. It is shown that the ratio of the yields of hard pions (qsub($\pi$) > or approximately 300 MeV/c) over this energy range is approximate to 1. The behaviour is discussed of the $\pi$/sup -//$\pi$/sup +/ ratio for the interval of pion momenta 300 <= qsub($\pi$) <= 900 MeV/c. The results obtained are compared with the data of other experiments.

**21623 (INIS-SU—399) Experimental and theoretical data. Collection.** (AN SSSR, Moscow. Fizicheskij Inst.). 1986. 40p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE87780091.

Kratkie Soobshcheniya po Fizike. No. 4.

Separate abstracts were prepared for 4 papers in this book. (DWL)

**21624 (LA—10915-PR) Applied nuclear science research and development: Progress report, December 1, 1985-June 30, 1986.** Arthur, E.D.; Mutschlecner, A.D. (comps.). (Los Alamos National Lab., NM (USA)). Feb 1987. Contract W-7405-ENG-36. 129p. NTIS, PC A07/MF A01; 1; GPO Dep. File Number DE87006311.

The diverse theoretical and experimental research in the field of applied nuclear physics is reviewed by presenting brief synopses of each research project. These research projects are organized into sections dealing with the theory and evaluation of nuclear cross sections, nuclear cross-section processing and testing, neutron activation, fission products, actinides, and applications. 30 refs., 90 figs., 13 tabs. (DWL)

**21625 (LA-UR—87-219) Recent joint developments in cross-section uncertainty analysis at Los Alamos and EIR [Eidgenoessiches Institut fuer Reaktorforschung].** Davidson, J.W.; Dudziak, D.J.; Muir, D.W.; Stepanek, J.; Higgs, C.E. (Los Alamos National Lab., NM (USA); Eidgenoessisches Inst. fuer Reaktorforschung, Wuerenlingen (Switzerland)). 1986. Contract W-7405-ENG-36. 16p. (CONF-861250—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87005098.

From IAEA advisory group meeting on nuclear data for fusion reactor technology; Dresden, German D.R. (1 Dec 1986).

This paper discusses recent developments and future plans for the SENSIBL code (the successor to the SENSIT[6] and SENSIT-2D[7] codes), along with associated covariance data and cross section libraries. 34 refs. (DWL)

**21626 (LBL—22379) Workshop on nuclear structure at moderate and high spin: Slide report.** (Lawrence Berkeley Lab., CA (USA)). Oct 1986. Contract AC03-76SF00098. 182p. (CONF-861077—Vugraphs). NTIS, PC A09. File Number DE87003622.

From Workshop on nuclear structure at moderate and high spin; Berkeley, CA, USA (13 Oct 1986).

The workshop was scheduled to coincide with the beginning of operation of a number of large arrays of Compton-suppressed germanium detectors. The workshop was divided into 14 sessions containing 3 presentations each. The topics of these sessions were superdeformation, heavy rare earths, single-particle configurations, band termination, continuum properties, light rare-earths, new techniques, high temperatures, transfer reactions, transition region, shapes, lifetimes, and moments. This publication consists of the slides used in all of the presentations at the workshop.

**21627 (SLAC-PUB—4119) [International workshop on few-body approaches to nuclear reactions, in tandem and cyclotron energy regions]: Concluding remarks.** Noyes, H.P. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Oct 1986. Contract AC03-76SF00515. 3p. (CONF-860832—10). NTIS, PC A02/MF A01; GPO Dep. File Number DE87004897.

From 11. international conference on few-body systems in particle and nuclear physics; Tokyo, Japan (24 Aug 1986).

The three body problem in nuclear physics is reviewed in light of recent theoretical and experimental developments.

**21628 Transition probability, B(E2)up-arrow, from the ground to the first-excited $2^+$ state of even-even nuclides.** Raman, S.; Malarkey, C.H.; Milner, W.T.; Nestor, C.W. Jr.; Stelson, P.H. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Atomic Data and Nuclear Data Tables;* **36**: No. 1, 1-96(Jan 1987). Contract AC05-84OR21400.

Adopted values for the reduced electric quadrupole transition probability, B(E2)up-arrow, from the ground state to the first-excited $2^+$ state of even-even nuclides are given in Table I. Values of tau, the mean life of the $2^+$ state, E, the energy, and $\beta_2$, the quadrupole deformation parameter, are also listed there. The ratio of $\beta_2$ to the value expected from the single-particle model is presented. The intrinsic quadrupole moment, Q/sub O/, is deduced from the B(E2)up-arrow value. The product E x B(E2)up-arrow is expressed as a precentage of the energy-weighted total and isoscalar E2 sum-rule strengths.

**21629 Average transverse momentum and energy density in high-energy nucleus-nucleus collisions.** Burnett, T.H.; Dake, S.; Fuki, M.; Gregory, J.C.; Hayashi, T.; Holynski, R.; Iwai, J.; Jones, W.V.; Jurak, A.; Lord, J.J.; and others. (Institute for Cosmic Ray Research, University of Tokyo, Tanashi, Tokyo 188, Japan; Department of Physics, Kobe University, Kobe 657, Japan; Okayama University of Science, Okayama 700, Japan; Department of Applied Mathematics, Osaka University, Osaka 560, Japan; Science and Engineering Research). *Physical Review Letters;* **57**: No. 26, 3249-3252(29 Dec 1986).

Emulsion chambers were used to measure the transverse momenta of photons or $\pi^0$ mesons produced in high-energy ($\geq$1 TeV/amu) cosmic-ray nucleus-nucleus collisions. A group of events having large average transverse momenta have been found which apparently exceed the expected limiting values. Analysis of the events at early interaction times, of the order of 1 fm/c, indicates that the observed transverse momentum increases with both rapidity density and energy density.

**21630 (IAE—4041/12) Influence of the process (dμ)sub(n)+t -> d+(tμ)sub(n) on the kinetics of muon catalysis in a mixture D/sub 2/+T/sub 2/.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1984. 7p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700876.

Influence of (dsub(μ))sub(n)+t -> d+(tsub(μ))sub(n) quasiresonance charge-exchange interaction process from dsub(μ) atom n <= 5 excited state into similar tsub(μ) atom state on the kinetics of muon catalysis in D/sub 2/+T/sub 2/ mixture is considered. 11 refs.; 3 figs.

**21631 (ITEF—163(1984)) Elastic and quasi-elastic /sup 3/Hep scattering at /sup 3/He nucleus momentum of 2.5 GeV/c.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1984. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700983.

Differential cross sections of elastic, quasielastic /sup 3/Hep scattering as well as mean energy losses of fast protons in the p+sup(3)He -> psub(F)+X reaction are obtained by means of the ITEP liquid-hydrogen bubble chamber 80 cm in diameter exposed in a beam of /sup 3/He nuclei with 2.5 GeV/c momentum (kinetic energy of primary protons in the system of nucleus rest Tsub(p)=0.318 GeV). Experimental data are compared with predictions of Glauber-Sitenko theory of multiple scattering. 5 refs.; 3 figs.; 1 tab.

**21632 Erratum: isospin dependence of pion absorption on nucleon pairs.** Silbar, R.R.; Piasetzky, E. *Physical Review [Section] C: Nuclear Physics;* **30**: No. 4, 1365(Oct 1984).

The relative sign between the NN′ and NΔ intermediate states was incorrect in the computer code that produced the predictions in this paper. Correcting this error makes negligible changes in the predictions of $\sigma_1$, the cross section for absorption by T = 0 NN pairs. The angle-averaged ratio R (Fig. 3) is also negligibly affected by this correction. The major effect of this sign error is to reverse the asymmetry of the T = 1 cross section $\sigma_3$(theta) about

theta = $\pi/2$. An example of this is shown for T/sub $\pi$, lab/=255 MeV. Note that the authors prediction in the paper of a prominent backward peaking in R (theta) at this energy now becomes, as corrected, a prediction for strong forward peaking. At T/sub $\pi$,lab/ =65 MeV the asymmetry is now in agreement with the observed backward-peaked cross section, but the predicted angular distribution is still flatter than the data.

## 6513 Nuclear Properties And Reactions, A=6-19, Experimental

21633 **(ITEF—5(1985)) Proton, neutron and deuteron yields from different nuclei including separated Li, B, Ni, Sn isotopes.** Bayukov, Yu.D.; Vlasov, A.V.; Gavrilov, V.B. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 67p. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87700965.

The tables of cross-sections of proton production with energies 70-230 MeV, neutron production with energies 75-190 MeV, deuteron production with energies 90-230 MeV for reaction pA -> hX at 7.5 GeV/c, $\pi$/sup -/A -> hX at 5 GeV/c for /sup 6/Li, /sup 7/Li, Be, /sup 10/B, /sup 11/B, C, F, /sup 58/Ni, Ni, /sup 64/Ni, Cu, Zn, /sup 112/Sn, Sn, /sup 124/Sn, In nuclei are presented. Proton and deuteron yields are measured at the angles of 30 deg, 60 deg, 88 deg, 119 deg, 160 deg and neutron yields - at the angles of 60 deg, 88 deg, 119 deg. 9 refs.; 5 tabs.

21634 **(ITEF—30(1985)) Inelastic scattering of 130MeV K/sup +/-mesons on light nuclei with proton escape.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 13p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700967.

A(K/sup +/,K/sup +/p) reaction on light nuclei (C, N, O) of photoemulsion is experimentally studied for the first time. Integral cross section of the reaction, momentum and angular distributions of residual nuclei, energy proton spectrum, differential cross section of K/sup +/-meson scattering, some other characteristics of the reaction are obtained. Experimental distributions are compared with calculations by the model of direct knock-out as well as with similar data for ($\pi$sup(+-), $\pi$sup(+-)p) reactions at 170 MeV. Main contribution to the cross section of the investigated reaction is shown to be produced by the mechanism of direct proton knock out. Estimation of the contribution of two-stage mechanism is carried out. 8 refs.; 7 figs.

21635 **(ITEF—60(1984)) Manifestation of narrow maximum in the impulse distribution of $\pi$ mesons from the $\pi$/sup +/+A(C,Xe)->$\pi$/sup +-/+kp(k=0,1,2...)+A' reactons.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1984. 20p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700971.

The assumption, that $\pi$/sup -/ mesons shaping a narrow peak in a momentum sectrum in the range of small momenta from the $\pi$/sup +/+C -> $\pi$/sup -/+kp (k=0, 1, 2...)+A', $\pi$/sup +/+Xe -> $\pi$/sup -/+kp (k=0, 1, 2...)+A' are produced as a result of highly excited nucleus state decay, is discussed. The $\pi$/sup +/C -> $\pi$/sup +/ (barkward) +kp (k=0, 1, 2...+A)', $\pi$/sup +/+Xe -> $\pi$/sup +/(barkward)+kp (k=0, 1, 2...)+A7 at the momentum of incidence $\pi$/sup +/ meson equal to 2.9 GeV/c are studied for testing this assumption. Photographs are obtained in the 120 l propane-xenon ITEP chamber placed in a magnetic field. Existence of the $\pi$/sup +/ narrow peak is proved in the Psub($\pi$)sup(+) < 740 MeV/c momenta range. Different mechanisms permitting to explain this experimentally obtained phenomenon are analyzed. 3 refs. ; 8 figs.

21636 **(ITEF—96(1985)) Analysis of dependence on target nucleus mass number of spectrum shapes and angular distributions of protons produced in hadron-nucleus interactions.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 16p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700974.

Spectrum and angular distribution shapes of protons, produced in the $\pi$(5 GeV/s) and P(7,5 GeV/s) interactions with /sup 6/Li, /sup 7/Li, Be, /sup 10/B, /sup 11/B, C, F, Ni, Cu, Zn, In, Sn nuclei are analysed. It is shown that cumulative proton angular distribution and spectrum shapes do not depend on the target nucleus mass number with the accuracy of approximately 5% and approximately 1% respectively. 12 refs.; 8 figs.

21637 **Correlations between $\alpha$ particles and evaporation residues for the /sup 14/N+/sup 12/C reaction at E(/sup 14/N) = 180 MeV.** Gomez del Campo, J.; DiGregorio, D.E.; Biggerstaff, J.A.; Chan, Y.D.; Hensley, D.C.; Stelson, P.H.; Shapira, D.; Ortiz, M.E. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Physical Review [Section] C: Nuclear Physics;* **35**: No. 1, 137-140(Jan 1987). Contract AC05-84OR21400.

Angular correlations between $\alpha$ particles and evaporation residues have been measured to study the equilibrium versus nonequilibrium effects on the fusion process. Measurements with $\alpha$-particle detectors were carried out to extreme forward angles (4°) to maximize the sensitivity to nonequilibrium components. The results are consistent with complete fusion and equilibrium decay, in contrast with recent systematics that predict large amounts of incomplete fusion at this energy.

Kratkie Soobshcheniya po Fizike. No. 3.

In Experimental and theoretical physics. Collection.

Total cross sections of neutron interaction with /sup 58/Ni were studied using the ultracold neutron (UCN) spectrometer at

sample temperatures of 298 and 80 K and also under the action of a magnetic field with 116-1064 Oe intensity. It follows from the experiments with magnetic field that elastic UCN scattering is primarily determined by scattering on nonuniformities of a magnetic nature. Presence of elastic scattering of neutrons with a velocity < 30 m/s in the magnetic field corresponding to saturation magnetization (H=600, 1064 Oe) points to the fact, that nonuniformities of a nonmagnetic nature with sizes about an order of UCN wavelength probably exist in this sample.

21641 **Beta-delayed proton decay of /sup 61/Ge.** Hotchkis, M.A.C.; Reiff, J.E.; Vieira, D.J.; Bloennigen, F.; Lang, T.F.; Moltz, D.M.; Xu, X.; Cerny, J. (Department of Chemistry and Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Physical Review [Section] C: Nuclear Physics;* **35**: No. 1, 315-319(Jan 1987). Contract AC03-76SF00098.

The T/sub z/ = -(3/2), A = 4n+1 nuclide /sup 61/Ge has been produced via the /sup 40/Ca(/sup 24/Mg,3n) reaction and identified by its beta-delayed proton emission. A single proton group at 3.11 +- 0.03 MeV with t/sub 1/2/ = 40 +- 15 ms has been observed, corresponding to decay of the T = (3/2) isobaric analog state in /sup 61/Ga to the ground state of /sup 60/Zn. Searches for the beta-delayed proton decay of the next member of this series, /sup 65/Se, to be produced by the /sup 40/Ca(/sup 28/Si,3n) reaction, have proven unsuccessful.

21642 (INIS-SU—395, pp 11-18) **On some peculiarities of central collisions of 4.1 AxGeV/c momentum neon 22 nuclei with nuclei in photoemulsion.** Krasnov, S.A.; Tolstov, K.D.; Shabratova, G.S. (Joint Inst. for Nuclear Research, Dubna, USSR. Lab. of High Energy). 1986. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780088. (N—16-86).

In JINR rapid communications. Collection.

Some peculiarities of 259 central collision events selected among 4309 inelastic interactions of neon 22 nuclei with nuclei in photoemulsion have been investigated. The correlations between the multiplicities of different types of the secondaries become less in comparison with the analogous ones for all inelastic interactions. At the same time the coefficients of pseudorapidity correlations for particles with $\beta>0.7$ differ from zero. A wide maximum in the angular distribution for slow particles- products of target nucleus disintegration is observed. 18 events have been selected from 243 events of the central collisions with the silver and bromine nuclei. In these interactions at a large number of fast charged particles (of about 40) the emission of such particles with angles up to 6-12 deg relative to the primary nucleus direction is not observed. The probability of random appearance of these events does not exceed 10/sup -3/. 2 refs.; 2 figs.; 3 tabs.

21643 **(IAE—4144/2) Study on the /sup 90/Zr(/sup 6/Li,/sup 6/He)/sup 90/Nb reaction at Esub(sup(6) Li) = 93 MeV.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1984. 32p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE87700882.

Energy spectra /sup 6/He from /sup 90/Zr(/sub 6/Li, /sup 6/He) reaction at Esub(Li)=93 MeV at different angles in the range of THETAsub(lab.syst.)=7-20 deg are measured. The spectrum and angular distribution theoretical analysis is carried out within the framework of the distorted wave method using transitional densities of bound and resonance states, found on the basis of finite Fermi-system theory. It is shown, that the quasi-elastic direct recharging mechanism dominates in the reaction up to excitation energies Esub(x) approximately 10 MeV in /sup 90/Nb, and in the high Esub(x) range the multistage process contribution increases sharply. It is also shown, that the quasi-elastic cross section is determined by the partial contribution sum of a large spin-isospin flip transition number with multipolarity L from 0 up to approximately 6. 50 refs.; 12 figs.

21644 (INIS-SU—399, pp 19-21) **Interaction of low-energy neutrons with tellurium isotopes.** Musaelyan, R.M.; Ovdienko, V.D.; Sklyar, N.T.; Skorkin, V.M.; Fedorov, M.B.; Yakovenko, T.I. 1986. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE87780091.

Kratkie Soobshcheniya po Fizike. No. 4.

In Experimental and theoretical data. Collection.

Total neutron cross sections of sup(122,124,126,128,130)Te isotopes are obtained for 0.41-2.16 MeV energy range. These data are analyzed on the basis of different variants of the generalized optical model. The optical potential real part had the radial Woods-Saxon dependence. The potential imaginary part was taken in the form of the Woods-Saxon form-factor derivative and spinorbit interaction - in the Thomas form. 10 refs.; 2 figs.

21645 **Neutron emission in the fissioning /sup 158/Er composite system.** Gavron, A.; Gayer, A.; Boissevain, J.; Britt, H.C.; Awes, T.C.; Beene, J.R.; Cheynis, B.; Drain, D.; Ferguson, R.L.; Obenshain, F.E. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review [Section] C: Nuclear Physics;* **35**: No. 2, 579-590(Feb 1987).

We have measured the spectra and angular distribution of neutrons emitted in coincidence with fission fragments in the following reactions: /sup 16/O+ /sup 142/Nd (E/sub beam/ = 207 MeV), /sup 24/Mg+ /sup 134/Ba (180 MeV), /sup 32/S+ /sup 126/Te (180 MeV), and /sup 50/Ti+ /sup 108/Pd (216 MeV). We decompose neutron emission into components resulting from nonequilibrium emission, emission from the compound system, and emission from the fission fragments. We find that statistical model calculations tend to underestimate the number of neutrons evaporated prior to fission. Incorporating the effects of (1) the finite time until equilibrium fission probability is attained at the saddle point, (2) correction to the Bohr-Wheeler formalism due to nuclear viscosity, and (3) neutron emission during the descent from saddle to scission, improves the agreement with the experimental data. The value of the reduced nuclear dissipation coefficient $\beta$ that is consistent with our data is approximately 6 x 10/sup 21/ s/sup -1/, within the framework of the model we have used.

21646 **Investigation of A = 152 radioactivities with mass-separated sources: Identification of /sup 152/Lu.** Toth, K.S.; Sousa, D.C.; Nitschke, J.M.; Wilmarth, P.A. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Physical Review [Section] C: Nuclear Physics;* **35**: No. 1, 310-314(Jan 1987). Contract AC05-84OR21400.

Nuclides with A = 152 were produced in /sup 58/Ni bombardments of /sup 96/Ru and their decay properties were investigated following on-line mass separation. The isotope /sup 152/Lu (T/sub 1/2/ = 0.7 +- 0.1 s) was identified by $\gamma$ rays in its $\beta$-decay daughter, /sup 152/Yb. Based on its decay characteristics, the parent state has a probable spin and parity assignment of ($4,5,6^-$). Several new transitions were observed to follow the $\beta$ decays of /sup 152/Yb and the /sup 152/Tm low-spin isomer; they established previously unknown levels in both /sup 152/Tm and /sup 152/Er. The additional $\gamma$ rays in /sup 152/Yb decay reduce from 100% to 88% the direct feeding to the one excited state in /sup 152/Tm that had been known earlier. Nevertheless, the corresponding logft value is calculated to be 3.5, indicating that this is an allowed $\beta$ transition which connects the $0^+$ parent with a $1^+$ excited state in /sup 152/Tm. By comparing the $\beta$-decay rates of /sup 148/Dy and /sup 152/Ho, and the $\alpha$- and $\beta$-decay rates of /sup 152/Er, an $\alpha$ branch of 90 +- 4 % was deduced for /sup 152/Er.

21647 **Octupole deformation in neutron-rich barium isotopes.** Phillips, W.R.; Ahmad, I.; Emling, H.; Holzmann, R.; Janssens, R.V.F.; Khoo, T.h.; Drigert, M.W. (Argonne National Laboratory, Argonne, Illinois 60439). *Physical Review Letters;* **57**: No. 26, 3257-3260(29 Dec 1986). Contract W-31-109-ENG-38.

Partial decay schemes for the very neutron-rich nuclei /sup 142,144/Ba and /sup 146/Ba have been determined by the study of

γ-γ coincidences in /sup 252/Cf fission fragments. Interlaced positive- and negative-parity levels connected by fast electric dipole transitions are observed in /sup 144/Ba and /sup 146/Ba above spin 7h-dash-bar. This is similar to the situation in some light actinide nuclei, where the data have been interpreted in terms of reflection-asymmetric shapes.

21648 **Large-scale shell model calculations for odd-odd nuclei and comparison to experimental studies of fission product nuclei in the /sup 132/Sn region.** Lane, S.M.; Henry, E.A.; Meyer, R.A. (Lawrence Livermore National Lab., Livermore, CA 94550). pp 676-705 of International symposium on nuclear shell models. Vallieres, M.; Wildenthal, B.H. Philadelphia, PA; World Scientific Pub. Co. (1984). (CONF-8410144—).

From International symposium on nuclear shell model; Philadelphia, PA, USA (31 Oct 1984).

Experimental spectroscopy data of fission products have been obtained using highly automated and rapid chemical separations followed by automated spectroscopy studies of isolated fission products. These data have established the presence of only a single level with spin-parity of 1/sup +/ below 1500 keV of excitation in Z=51 /sup 132/Sb/sub 81/. This is in contrast to the results of studies of /sup 130/Sb and /sup 134/I. For /sup 134/I, the N=81 isotone with Z=53, the authors can characterize three 1/sup +/ levels below 1200 keV. For /sup 130/Sb/sub 79/ that has a neutron pair less than /sup 132/Sb, we can identify two 1/sup +/ levels below 1100 keV. The authors can account for the additional levels using the LLNL shell-model code which is based on the Lanczos tridiagonalization algorithm using an uncoupled m-scheme basis and vector manipulations. The 1g/sub 7/2/, 2d/sub 5/2/, 2d/sub 3/2/, 1h/sub 11/2/, and 3s/sub 1/2/ orbitals are available to the valence protons and the 2d/sub 5/2/, 2d/sub 3/2/, 1h/sub 11/2/, and 3s/sub 1/2/ orbitals are available to the valence neutron holes. Analysis of the wavefunctions show the dominant role of three nucleon cluster configurations in producing the increased number of states at low energy. The absence of nucleon cluster configurations in the parent nucleus /sup 130/Sn is used to explain the reduction in the Gamow-Teller beta strength to the low lying 1/sup +/ levels of /sup 130/Sb.

21649 **Bayman, Ellis and Tang respond.** Bayman, B.F.; Ellis, P.J.; Tang, Y.C. (Univ. of Minnesota, Minneapolis). *Physical Review Letters;* **50**: No. 3, 216(17 Jan 1983). Contract AC02-79ER10364.

MacGregor have raised several important issues relevant to the experimental evidence for the existence of anomalons, and to their suggestion that anomalons may be deformed quasimolecular resonances (QMR). These issues are briefly discussed.

## 6518 Nuclear Properties And Reactions, A=150-189, Experimental

21650 **Distributions of the total energy and multiplicity of gamma rays feeding the discrete yrast states in heavy-ion-induced fusion reactions.** Lee, I.Y.; Baktash, C.; Beene, J.R.; Fewell, M.P.; Halbert, M.L.; Johnson, N.R.; McGowan, F.K.; Milner, W.T.; Kim, H.J.; Sayer, R.O. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Physical Review [Section] C: Nuclear Physics;* **35**: No. 2, 605-613(Feb 1987). Contract AC05-84OR21400;AC02-76ER04052.

The distribution of the total energy and multiplicity of gamma rays feeding the yrast transitions has been measured for /sup 158,159/Er, /sup 130/Ce, and /sup 116,117/Te, which are produced in several heavy-ion fusion reactions. The observed shape of the distribution feeding discrete yrast states varies with the spin of the yrast transition. However, the differences are small, especially for heavier-ion induced reactions.

21651 **Decay properties of /sup 150/Tm and /sup 150/Er.** Toth, K.S.; Sousa, D.C.; Nitschke, J.M.; Wilmarth, P.A. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Physical Review [Section] C: Nuclear Physics;* **35**: No. 2, 620-624(Feb 1987). Contract AC05-84OR21400;AC03-76SF00098.

The decay properties of /sup 150/Tm and /sup 150/Er (produced in /sup 58/Ni bombardments of /sup 96/Ru) were investigated following on-line mass separation. The half-life of /sup 150/Tm was measured to be 2.2 +- 0.2 s rather than the value of 3.5 s available in the literature. Based on its decay characteristics, we suggest that this high-spin /sup 150/Tm isomer has a spin assignment of $6^-$. Among the /sup 150/Er states fed by this $6^-$ isomer is the yrast $4^+$ level (2294.8 keV) which up to now has been observed in neither β-decay nor in-beam γ-ray studies. New transitions observed in /sup 150/Er decay establish several previously unknown levels in /sup 150/Ho. While the additional γ rays reduce from 100% to 96% the feeding to the 476-keV state in /sup 150/Ho known earlier, the corresponding logft value is calculated to be 3.6, indicating that this is an allowed, $0^+ \rightarrow 1^+$, beta transition. Photon intensities obtained for γ rays following the decay of the /sup 150/Ho low-spin isomer resolve inconsistent values measured in two previous investigations.

21652 **Fission induced in /sup nat/U, /sup nat/Pb, /sup 197/Au, and /sup 165/Ho by 80 and 100 MeV πi and $\pi^-$.** Khan, H.A.; Khan, N.A.; Peterson, R.J. (Solid State Nuclear Track Detector Laboratory, Nuclear Engineering Division, Pakistan Institute of Nuclear Science and Technology, Rawalpindi, Pakistan). *Physical Review [Section] C: Nuclear Physics;* **35**: No. 2, 645-650(Feb 1987).

Solid state nuclear track detectors having different detection thresholds have been employed to study the fission fragments and the light charged particles emitted in the interaction of 80 and 100 MeV π/sup +- / with targets of /sup nat/U, /sup nat/Pb, /sup 197/Au, and /sup 164/Ho. Cross sections for the production of correlated fission fragments (and other heavy charged particles)= and the unpaired single charged particles were obtained in different Z and Z/β domains. Energies and masses of the reaction products are estimated. Angular correlations of the reaction products have also been obtained. A large fraction of protons and (to a lesser extent) alpha particles are found to be emitted in these interactions. It has been found that distributions of the fission fragments are only slightly anisotropic and that their mass distributions are wider than those obtained for nucleon-induced fission having similar excitation energies. The results have been compared with the scanty data available on the subject and with systems having comparable excitation energies.

21653 **Lifetime measurements of high-spin states in /sup 166/Yb.** Bacelar, J.C.; Holm, A.; Diamond, R.M.; Beck, E.M.; Deleplanque, M.A.; Draper, J.; Herskind, B.; Stephens, F.S. (Nuclear Science Division, Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Physical Review Letters;* **57**: No. 24, 3019-3022(15 Dec 1986). Contract AC03-76SF00098.

The Doppler-shift attenuation method was used to measure lifetimes of yrast states in /sup 166/Yb. Values of tau range from 0.16(2) ps at $24^+$ to 0.05(1) ps at $34^+$. The B(E2) values decrease from 240 to 120 single-particle units in this spin range, indicating a loss of collectivity which likely reflects a change of the nucleus towards triaxial shape. The side-feeding times are consistent with rotational cascades having moments of inertia 25% larger than the yrast sequence or B(E2) values around 60 single-particle units.

21654 **Incomplete and complete fusion in intermediate energy heavy ion reactions.** Aleklett, K.; Loveland, W.; Sugihara, T.T.; Behkami, A.N.; Morrissey, D.J.; Wenxin, L.; Kot, W.; Seaborg, G.T. (Studsvik Neutron Research Lab., Nykoeping, Sweden; Oregon State Univ., Corvallis, USA; Michigan State Univ., East Lansing, USA; Lawrence Berkeley Lab., CA, USA). *Physica Scripta;* **34**: No. 6A, 489-494(Dec 1986).

The yields, angular distributions and differential range spectra have been measured for individual target residues from the interaction of 8.5 MeV/A /sup 16/O, 19 MeV/A /sup 16/O, 35 MeV/A /sup 12/C and 85 MeV/A /sup 12/C with /sup 154/Sm. From the measured data, fragment isobaric yields and velocity spectra were deduced. The results are compared to the predictions of a modified Boltzmann master equation model of precompound particle emission.

## 6519 Nuclear Properties And Reactions, A=190-219, Experimental

**21655 (CONF-850942—59) Signature splitting in $^{135}$Pr.** Semkow, T.M.; Sarantites, D.G.; Honkanen, K.; Abenante, V.; Baktash, C.; Johnson, N.R.; Lee, I.Y.; Oshima, M.; Schutz, Y.; Chen, C.Y. (Washington Univ., St. Louis, MO (USA); Oak Ridge National Lab., TN (USA); Pittsburgh Univ., PA (USA); Tennessee Univ., Knoxville (USA); Brookhaven National Lab., Upton, NY (USA)). 1985. Contract AC05-84OR21400. 7p. NTIS, PC A02. File Number DE87005977.

From 190. American Chemical Society national meeting; Chicago, IL, USA (8 Sep 1985).

In-beam spectroscopic study of $^{135}$Pr was made using 91 MeV $^{120}$Sn($^{19}$F,4n) reaction. A strong negative parity proton band based on the h/sub 11/2$^-$/ 1/2[550] configuration with $\alpha$ = -1/2 was observed. Possibly $\alpha$ = +1/2 unfavored band is observed. Also two positive parity proton bands are observed most likely based on the g/sub 7/2$^+$/ 5/2[413] configurations with $\alpha$ = +-1/2. In all cases (except for the ($\pi$,$\alpha$) = (-,+1/2) band) the backbending is caused by alignment of two h/sub 11/2$^-$/ 9/2[514] quasi-neutrons. For the strongly decoupled $\pi$(-) bands the observed signature splitting decreases with increasing rotational frequency. The signature splitting of the positive parity bands increases with rotational frequency and then inverts above the backbending. This is interpreted to be caused by the quasi-neutrons, which drive the $\gamma$-deformation to the negative values. 18 refs., 6 figs.

**21656 (HMI-P—86/7-HF-Prepr.) In-beam measurements of nuclear moments.** Mahnke, H.E. (Hahn-Meitner-Institut fuer Kernforschung Berlin G.m.b.H. (Germany, F.R.)). 1986. 13p. (CONF-860918—). NTIS (US Sales Only), PC A02/MF A01. File Number DE87751286.

From 7. international conference on hyperfine interactions; Bangalore, India (8 Sep 1986).

Nuclear moments contribute valuable information to nuclear structure studies of nuclei under extreme conditions, such as nuclei at high angular momentum or far from stability. While the magnetic moment is sensitive to the nature of the participating nucleons (neutron or proton) the quadrupole moment is a direct measure for nuclear deformation.

**21657 Nuclear Data Sheets for A = 201.** Schmorak, M.R. (Oak Ridge National Laboratory, P.O. Box X, Oak Ridge, Tennessee 37831). *Nuclear Data Sheets;* **49**: No. 4, 733-784(Dec 1986). Contract AC05-84OR21400.

## 6520 Nuclear Properties And Reactions, A=220 And Above, Experimental

**21658 Nuclear structure of /sup 231/Th from neutron capture and (d,p) reaction measurements.** White, D.H.; Boerner, H.G.; Hoff, R.W.; Schreckenbach, K.; Davidson, W.F.; von Egidy, T.; Warner, D.D.; Jeuch, P.; Barreau, G.; Kane, W.R. (Institut Laue-Langevin, 38042 Grenoble, France and Lawrence Livermore National Laboratory, Livermore, California 94550). *Physical Review [Section] C: Nuclear Physics;* **35**: No. 1, 81-110(Jan 1987). Contract W-7405-ENG-48.

The nuclide /sup 231/Th was investigated with the reactions /sup 230/Th(n,$\gamma$) /sup 231/Th, /sup 230/Th(n,$\gamma$e)/sup 231/Th, and /sup 230/Th(d,p)/sup 231/Th. Gamma rays from average resonance capture were measured, in addition to the usual thermal neutron capture spectroscopy. From these data, 70 excited levels in / sup 231/Th were identified and, of these, 57 were placed in 18 rotational bands with assigned configurations. Candidates have been proposed for all expected Nilsson states below 750 keV, albeit with varying degrees of confidence, including the (5/2)$^+$[622], (7/2)$^+$[624], (3/2)$^-$[761], (1/2)$^-$[770], (1/2)$^+$[640], and (5/2)$^-$[503] configurations. Several vibrational states have been identified; a special feature of these is the observation of greater fragmentation of single-particle-0$^+$ phonon-mixed states than expected theoretically. Assuming degenerate parity doublets indicate the existence of stable octupole deformation, no evidence was found for a tendency toward this phenomenon in /sup 231/Th. The neutron binding energy was determined to be 5118.13 +- 0.20 keV.

**21659 Dependence of actinide production on the mass number of the projectile: Xe +/sup 248/Cm.** Welch, R.B.; Moody, K.J.; Gregorich, K.E.; Lee, D.; Seaborg, G.T. (Nuclear Science Division, Lawrence Berkeley Laboratory, Berkeley, California 94720). *Physical Review [Section] C: Nuclear Physics;* **35**: No. 1, 204-212(Jan 1987). Contract AC03-76SF00098.

Production cross sections for actinide nuclides formed in the reactions of 791—769 MeV /sup 129/Xe and 817—793 MeV /sup 132/Xe with /sup 248/Cm were measured using radiochemical techniques to isolate elements 93 to 100 (Np to Fm). These results were compared with previous results from the reaction of 790—699 MeV /sup 136/Xe with /sup 248/Cm. The production cross section distributions of target-like nuclides for a given Z appear to shift to smaller A with the use of the more neutron-deficient projectiles. The production of nuclides with Z>Z/sub target/ increases at the expense of nuclides with Z<Z/sub target/ with use of the more neutron-deficient projectiles. The distribution of product cross sections from each reaction is treated as the sum of distributions of products from two reaction mechanisms, quasi-elastic transfer and deep inelastic transfer. Potential energy surfaces for the three reacting systems under discussion were calculated for touching sphere configurations and can be used to predict the production cross section trends. However, the peak position of the cross section distribution for a given Z is not accurately predicted by the potential energy surfaces, which suggests that deep inelastic transfer reactions may not be the dominant reaction mechanism, leading to the observed final distribution.

**21660 Measurement of the energy dependence of prompt fission neutron emission from /sup 233/U, /sup 235/U, and / sup 239/Pu for E = 0.0005 to 10 MeV relative to emission from spontaneous fission of /sup 252/Cf/sup */.** Gwin, R.; Spencer, R.R.; Ingle, R.W. (Oak Ridge National Lab., Oak Ridge, TN 37831). pp 589-592 of Nuclear data for basic and applied science. Volume 1. Young, P.G.; Brown, R.E.; Auchampaugh, G.F.; Lisowski, P.W.; Stewart, L. New York, NY; Gordon and Breach Science Publishers Inc. (1985). (CONF-850507—). Contract AC05-84OR21400.

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

A series of experiments has been performed to measure the dependence on incident neutron energy of $\nu$-bar/sub rho/(E), the average number of prompt neutrons emitted per fission, of /sup 233/U, /sup 235/U, and /sup 239/Pu relative to $\nu$-bar/sub rho/ (/ sup 252/Cf), the average number of prompt neutrons emitted in spontaneous fission of /sup 252/Cf. The incident energy range was 0.0005 to 10 MeV. A white neutron source was generated by the Oak Ridge Electron Linear Accelerator and the energies of the neutrons incident on the fissile samples were determined by time-of-flight techniques. The fissile sample and the /sup 252/Cf standard were contained in a fission chamber surrounded by a large volume (0.91 m/sup 3/) liquid scintillator loaded with gadolinium. Fissions were detected by the fission chamber and the neutrons were detected by the scintillator.

**21661 Status of fast neutron nuclear data for /sup 239/Pu.** Arthur, E.D. (Los Alamos National Lab., Los Alamos, NM). pp 445-457 of Nuclear data for basic and applied science. Volume 1. Young, P.G.; Brown, R.E.; Auchampaugh, G.F.; Lisowski, P.W.; Stewart, L. New York, NY; Gordon and Breach Science Publishers Inc. (1985). (CONF-850507—).

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

Recent energy-averaged data (fission, total cross section, scattering and v-bar/sub rho/) describing the interaction of fast neutrons with /sup 239/Pu are discussed, with emphasis on neutron energies higher than the inelastic scattering threshold. The linkage between such experimental data and new theoretical calculations is described in context of their influence on a new revision to the

ENDF/B-V /sup 239/Pu evaluation. Results from this new revision are compared with other current /sup 239/Pu evaluations. Incorporation of such information pertaining to neutron emission and v-bar/sub rho/ in the new ENDF revision had a profound impact on calculations performed for fast critical assemblies. Such calculational results are presented with emphasis on systematic improvements achieved in eigenvalues and fission ratios.

21662 **(CONF-8603115—4) Quantum mechanics and spectrum generating groups and supergroups.** Bohm, A. (Texas Univ., Austin (USA). Center for Particle Theory). Apr 1986. Contract FG05-85ER40200. 17p. (CPT—0057). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87004491.

From Symmetries in science II; Carbondale, IL, USA (24 Mar 1986).

Collective models are reviewed briefly as the physical basis for dynamical groups, particularly for molecular and nuclear physics. To show that collective models for extended relativistic objects can be constructed, the results of a quantal relativistic oscillator are reviewed. An infinite supermultiplet is then used to describe Regge recurrences as yrast states and daughters as radial excitations. (LEW)

21663 **(CONF-8609235—1) Measurement of low energy neutrino absorption probability in thallium 205.** Freedman, M.S. (Argonne National Lab., IL (USA)). 1986. Contract W-31109-ENG-38. 28p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87004655.

From International conference on solar neutrino detection with /sup 205/T1 and related topics; Dubrovnik, Yugoslavia (29 Sep 1986).

A major aspect of the P-P neutrino flux determination using thallium 205 is the very difficult problem of experimentally demonstrating the neutrino reaction cross section with about 10% accuracy. One will soon be able to completely strip the electrons from atomic thallium 205 and to maintain the bare nucleus in this state in the heavy storage ring to be built at GSI Darmstadt. This nucleus can decay by emitting a beta-minus particle into the bound K-level of the daughter lead 205 ion as the only energetically open decay channel, (plus, of course, an antineutrino). This single channel beta decay explores the same nuclear wave functions of initial and final states as does the neutrino capture in atomic thallium 205, and thus its probability or rate is governed by the same nuclear matrix elements that affect both weak interactions. Measuring the rate of accumulation of lead 205 ions in the circulating beam of thallium 205 ions gives directly the cross section of the neutrino capture reaction. The calculations of the expected rates under realistic experimental conditions will be shown to be very favorable for the measurement. A special calibration experiment to verify this method and check the theoretical calculations will be suggested. Finally, the neutrino cross section calculation based on the observed rate of the single channel beta-minus decay reaction will be shown. Demonstrating bound state beta decay may be the first verification of the theory of this very important process that influences beta decay rates of several isotopes in stellar interiors, e.g., Re-187, that play important roles in geologic and cosmologic dating and nucleosynthesis. 21 refs., 2 figs. (DWL)

21664 **(DOE/ER/10405—T12) Theoretical studies of multistep processes, isospin effects in nuclear scattering, and meson and baryon interactions in nuclear physics. Final technical report, 1 September 1979-30 April 1986.** Madsen, V.A.; Landau, R.H. (Oregon State Univ., Corvallis (USA). Dept. of Physics). 18 Sep 1986. Contract AT06-79ER10405. 21p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87000341.

Final technical report on a contract supporting theoretical studies in nuclear physics at Oregon State University is presented. The research was led by Professors Landau and Madsen and carried out in collaboration with graduate students in Corvallis and scientists at LLNL-Livermore, KFA-Julich, Purdue University-West Lafayette, University of Oregon-Eugene, Florida State University-Talahasie, and TRIUMF-Vancouver. The studies included meson exchange current effects, quark effects,and relativistic/Dirac effects deduced from spin observables in p-$^3$He scattering, coupled bound and continuum eigenstates in momentum space for kaons and antiprotons, and charge symmetry violation in $\pi$ scattering from trinucleons. Additional studies included microscopic optical potential calculations, multiple step processes, and differences in neutron and proton multipole matrix elements in low lying collective states and in giant resonances. 45 refs.

21665 **(GSI—86-40-Prepr.) Evidence for multiparticle correlations in high-energy heavy ion interactions.** Beckmann, P.; Doss, K.G.R.; Gustafsson, H.A.; Gutbrod, H.H.; Kampert, K.H.; Kolb, B.; Loehner, H.; Poskanzer, A.M.; Ritter, H.G.; Schmidt, H.R. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Oct 1986. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87751293.

An exclusive approach is proposed to study azimuthal multiparticle correlations in heavy ion interaction. Strong many-particle correlations are found in relativistic heavy ion reactions measured with the Plastic Ball spectrometer. Energy, mass, and multiplicity dependence of the correlations are examined.

21666 **(GSI—86-41-Prepr.) New results from dissipative diabatic dynamics and nuclear elastoplasticity.** Noerenberg, W. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Oct 1986. 13p. (CONF-8609159—5-Prepr.). NTIS (US Sales Only), PC A02/MF A01. File Number DE87751269.

From International school-seminar on heavy ion physics; Dubna, USSR (23 Sep 1986).

I present new results about dissipative diabatic dynamics and nuclear elastoplasticity, in particular on a self-consistent diabatic formulation, on first numerical calculations of dissipative diabatic dynamics in two collective degrees of freedom, on quasi-elastic recoil in central nucleus-nucleus collisions, on the diabatic hindrance of fusion reactions and on the diabatic emission of nucleons in central nucleus-nucleus collisions. (orig./HSI).

21667 **(IAE—4048/2) Quantum mechanics and liquid drop model of nuclei.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1984. 37p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87700877.

The quantum-mechanical model calculations have been performed for a large group of intermediate, heavy and superheavy double-magic highly neutron-or proton-rich nuclei. It has been shown that the liquid drop model and binding energy formulas (of the Bethe-Weizacker type) based on this model after modification of the term describing the symmetry energy, agrees reasonably well with the calculation data within a wide region of A and Z variations. Interpolation formulas for nucleus radii, their compressibility and monopole radial oscillation energies (breathing mode) have been obtained too. The results have been found weakly dependent on the shapes of three different nucleon-nucleon potentials used in the calculations. 22 refs.; 12 figs.; 6 tabs.

21668 (INIS-SU—395, pp 5-10) **Fragmentation of one-quasiparticle states in sup(153, 155)Sm and sup(153, 155)Eu.** Malov, L.A.; Nguen Din' Vin'; Solov'ev, V.G. (Joint Inst. for Nuclear Research, Dubna, USSR. Lab. of Theoretical Physics). 1986. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780088. (N—16-86).

In JINR rapid communications. Collection.

Fragmentation is calculated for neutron 2fsub(7/2), 1hsub(9/2), 1isub(13/2), 3psub(3/2), 2fsub(5/2), 3psub(1/2), 2gsub(9/2) and proton 1gsub(7/2), 2dsub(5/2), 1hsub(11/2), 2dsub(3/2), 2fsub(7/2) subshells providing a dominant contribution to the cross sections of (a, /sup 3/He) and (a, t) reactions in the sup(152, 154)Sm isotopes. 7 refs.; 2 figs.

21669 (INIS-SU—398, pp 14-30) **Collective properties of even-even tellurium isotopes.** Kuznichenko, A.V.; Lebedev, V.N.; Onishchenko, G.M.; Alikov, B.A.; Nazmitdinov, R.G. 1985. (In Russian). NTIS (US Sales Only), PC A05/MF A01. File Number DE87780090.

In Problems of nuclear physics and cosmic rays. No. 23. Republican Interinstitute scientific technical collection.

Properties of the even-even /sup 118/-/sup 126/Te isotopes are investigated in the framework of the interacting boson approximation (IBA-1) model. Calculated excitation energies, E2 transition probabilities and quadrupole moments of the 2/sub 1//sup +/ states are compared with experiment. The collective features of these nuclei are found to be in satisfactory agreement with the predictions of the IBA. Clear deviations for relatively high states (1>=6/sup +/) could be related to an increasing importance two-quasiparticle components in the wave functions of these states. 21 refs.; 3 figs.; 2 tabs.

21670 (INIS-SU—398, pp 3-13) **On the inelastic scattering of 20 MeV polarized protons and 50 MeV $\alpha$-particles on some light and intermediate mass nuclei.** Plavko, A.V.; Kudryashov, V.I.; Lombar, R.M.; Ehskyud'e, Zh.L.; Dejsebaev, A.D.; Burtebaev, N.T. 1985. (In Russian). NTIS (US Sales Only), PC A05/MF A01. File Number DE87780090.

In Problems of nuclear physics and cosmic rays. No. 23. Republican Interinstitute scientific technical collection.

It is shown that in an inelastic scattering of polarized protons at an energy of about 20 MeV from a number of light nuclei a correlation is observed between the angular distributions of the analyzing power A(THETA) and the excitation energy of nuclear levels. This correlation is established to be in accordance with the nuclear structure. The experimental A(THETA) distributions are compared with coupled-channels calculations. The dependence of the A(THETA) distributions on the nuclear structure is found to be more marked than for the angular distributions $d\sigma/d\Omega$ in the (p,p') and (a,a') processes. 20 refs.; 4 figs.

21671 **(INS—566) Analysis of $\gamma$d -> $\pi$/sup 0/d in the energy region from 400 to 900 MeV.** (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Feb 1986. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700933.

The differential cross section for $\gamma$d -> $\pi$/sup 0/d is estimated based on elementary processes. From a comparison between calculated results and experimental data in a backward region, it is found that the double scattering process becomes dominant and the effect of dibaryon resonances is not significant within the experimental accuracy.

21672 **(ITEF—38(1985)) Multiple rescattering in the intranuclear cascade model.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 23p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700969.

The following problems are considered in detail within the frames of the model of intranuclear cascade (MIC): number of interactions which a particle suffers in a nucleus (further on - multiplicty); different multiplicities contributing to particle production in kinematically forbidden region for particle scattering on a free nucleon; dependence of characteristics of interaction multiplicity on atomic weight of nucleus-target. pA reactions, where A is C or Pb nucleus, at kinetic energy of an incident proton T/sub 0/=8 GeV are considered. The conducted analysis confirmed expected qualitative characteristics of rescattering. Angular and energy distributions of interaction multiplicities can be explained wthin the frames of the model. Existence of high multiplicities both for a heavy Pb and light C nucleus turned to be unusual. 10 refs.; 15 figs.

21673 **(ITEF—144(1985)) Energy dependence of p-odd angular asymmetry for fragments and atomic nucleus fission dynamics.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 24p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700980.

Manifestation of sup(234)U and sup(240)Pu nucleus fission dynamics in the angular fragment asymmetry occuring due to parity violation in nucleon interaction is investigated. The fission motion is defined by the adiabatic equation with variable moment of inertia and the effective potential-fission barrier. Fission motion dissipation to internal one is taken into account by an introduction of absorption and consumption of energy of fission motion behind the fission barrier. Resonance state spectrum in the second well of fission barrier is obtained. It is found out that energy dependence of asymmetry is primarily defined by a relation of neutron resonance parameters and secondary by a dynamics of fission process through phase shift in a fission channel. Classification of types of angular asymmetry energy dependence is performed. Strong phase shift dependence on dissipation degree behind a barrier is discovered. Adjustment of experimental data by relations of the resonance theory of nuclear reactions with minimization of mean-square-root deviation leads to the conclusion on strong, but not total dissipation degree. 21 refs.; 10 figs.

21674 **(ITEP—60(1985)) Study on the mechanism of the /sup 3/He+p->p+p+d reaction at /sup 3/He momentum of 5 GeV/c.** Blinov, A.V.; Chuvilo, I.V.; Drobot, V.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 50p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87700986.

The mechanism of the reaction /sup 3/He+p -> p+p+d is studied making use of the ITEP 80-cm liquid-hydrogen bubble chamber exposed to the beam of 5 GeV/c /sup 3/He nuclei. The reaction cross sections is equal to 20.6 +- 0.3 mb. The phase space regions associated with quasi-free scattering (QFS) and final state interaction (FSI) are selected. Angular, mass and momentum distributions of the reaction products are obtained in the entire kinematically allowed range. The experimental data in the QFS region are compared with theoretical calculations based on the simplest pole diagram approximation. The /sup 3/He and deuteron wave functions (WF) correspond to the realistic Reid potential. The D-wave components of these WF are taken into account. The absolute value of the cross section and shape of the distributions are described as a whole reasonably enough in the frame of the considered model in the kinematical region where FSI may be neglected. 34 refs.; 11 figs.; 3 tabs.

21675 **(LBL—22072) Introduction to quantum chromo transport theory for quark-gluon plasmas.** Gyulassy, M.; Elze, H.Th.; Iwazaki, A.; Vasak, D. (Lawrence Berkeley Lab., CA (USA)). Aug 1986. Contract AC03-76SF00098. 33p. (CONF-8606183—10; CONF-8606263—1). NTIS, PC A03/MF A01; GPO Dep. File Number DE87000937.

From NATO international advanced course on physics of strong fields; Maratea, Italy (1 Jun 1986).

Upcoming heavy ion experiments at the AGS and SPS are aimed at producing and diagnosing a primordial form of matter, the quark-gluon plasma. In these lectures some recent developments on formulating a quantum transport theory for quark-gluon plasmas are introduced. 46 refs.

21676 **(SLAC-PUB—3216) Future experiments on QCD effects in few nucleon systems with high energy electrons.** Arnold, R.G. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Sep 1983. Contract AC03-76SF00515. 10p. NTIS.

From 10. international conference on few body problems in physics; Karlsruhe, West Germany (22-27 Aug 1983).

A central question in the study of the few nucleon systems today is how to understand nuclear structure in terms of the quark degrees of freedom. It is now clear that nucleons are composite, and that QCD, the gauge theory of colored quarks and gluons, is probably the correct theory of hadronic matter. The question is: At what points in the authors description of nuclear structure do they have to abandon the conventional meson-nucleon theory in favor of quarks? In this talk some of the evidence for quarks in nuclei from previous high energy (E > 1 GeV) electron scattering experiments is reviewed. There is a great need for more electron data on nuclear targets. In response to that need there are now plans for more experiments in the near future.

21677 **Precompound decay in heavy ion reactions via the hybrid model.** Blann, M. (Physics Department, Lawrence Livermore National Laboratory, University of California, Livermore, California 94550). *Physical Review* [*Section*] *C: Nuclear Physics;* **35**: No. 4, 1581-1582(Apr 1987).

The hybrid model for precompound decay is applied to the calculation of neutron spectra following the /sup 20/Ne and /sup 12/C bombardment of /sup 165/Ho at 220, 292, (/sup 20/Ne), and 300 (/sup 12/C) MeV. Results are compared with experimentally deduced angle integrated spectra and with results of the Boltzmann master equation. Both models give excellent agreement with experimentally deduced spectra.

21678 **Superdeformed band in /sup 152/Dy as evidence for the centrifugal solidification of a rotating nucleus.** Swiatecki, W.J. (Nuclear Science Division, Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Physical Review Letters;* **58**: No. 12, 1184-1187(23 Mar 1987). Contract AC03-76SF00098.

The astonishing smoothness of the superdeformed rotational spectrum in /sup 152/Dy, from I = 22 to I = 60, is used as a basis for inferring a liquid-to-solid transition as the centrifugal force drives the nuclear shape into a closed-shell configuration.

21679 **Coupled-channels analysis of silicon-nickel fusion reactions.** Landowne, S.; Pieper, S.C.; Videbaek, F. (Physics Division, Argonne National Laboratory, Argonne, Illinois 60439). *Physical Review* [*Section*] *C: Nuclear Physics;* **35**: No. 2, 597-604(Feb 1987). Contract W-31-109-ENG-38.

Coupled-channels calculations are carried out for the series of $^{28}$30Si+ $^{58,62,64}$Ni fusion reactions. The low-lying excitations of the projectile and target nuclei are taken into account within the rotational and vibrational models, respectively. The effects of one- and two-nucleon transfer reactions are included in the calculations using approximate methods. A good overall agreement with the data is obtained. The fusion cross sections apparently reflect changes in the radii of the nickel isotopes suggested by Hartree-Fock calculations.

21680 **Quark exchange in nuclei and the European Muon Collaboration effect.** Hoodbhoy, P.; Jaffe, R.L. (Physics Department, Carnegie-Mellon University, Pittsburgh, Pennsylvania 15213). *Physical Review* [*Section*] *D: Particles and Fields;* **35**: No. 1, 113-121(1 Jan 1987).

Quark exchange between nucleons bound in a nucleus can cause a shift in the momentum distribution of quarks relative to free nucleons. This is true even if nucleon properties, including size, remain unchanged in the nuclear environment. This shift in momentum leads to a contribution to the matrix elements of single-quark operators which is nonadditive, and therefore cannot be incorporated into a convolution model. For A = 3 nuclei investigated here, such exchange contributions were found to be important, perhaps even dominant, in calculating the deviation from unity of the ratio of the nuclear structure function to that of the free nucleon (European Muon Collaboration ratio).

21681 **Formal framework for the electroproduction of polarized nucleons from nuclei.** Picklesimer, A.; Van Orden, J.W. (TRIUMF, Vancouver, British Columbia, Canada V6T 2A3 and Physics Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review* [*Section*] *C: Nuclear Physics;* **35**: No. 1, 266-279(Jan 1987).

A theoretical framework for the description of the (e-arrow-right,e'p-arrow-right) reaction is presented. A set of physically motivated, linearly independent four-vectors is employed to construct a complete set of second rank Lorentz tensors in terms of which the nuclear electromagnetic tensor is expressed. The implications of charge and parity conservation, time reversal, restricted spin dependence, and the final state boundary conditions are developed and applied. The azimuthal angular dependence (in the laboratory frame) of the nuclear tensor is made explicit, leading to the definition of a set of 18 independent response functions. The cross section and the polarization vector of the ejected proton are expressed in terms of the 13 new, spin-dependent response functions. The physical significance of these response functions with regard to spin observables is manifest. The separation of the response functions, both theoretically and experimentally, is discussed. Extensions and restrictions to the general (e-arrow-right,e'X) reaction, to reactions which violate current and/or parity conservation, and to the case of oriented (polarized) targets are evident. Questions of linear dependence, completeness, and alternative representations of the nuclear tensor for both (e-arrow-right,e'p-arrow-right) and the general (e-arrow-right,e'X) reaction are resolved. Preliminary numerical results indicate the sizes and relative importances of the new response functions and demonstrate their experimental accessibility.

21682 **Need for new physics in statistical models of nuclear de-excitation.** La Rana, G.; Moses, D.J.; Parker, W.E.; Kaplan, M.; Logan, D.; Lacey, R.; Alexander, J.M.; Welberry, R.J. (Department of Chemistry, Carnegie-Mellon University, Pittsburgh, Pennsylvania 15213). *Physical Review* [*Section*] *C: Nuclear Physics;* **35**: No. 1, 373-376(Jan 1987).

We have measured energy spectra and angular distributions of $^{1}$H and $^{4}$He from 190—MeV /sup 40/Ar+ /sup 27/Al reactions. Comparisons with statistical model calculations show that evaporation from spherical nuclei cannot account for both the energy spectra and angular distributions, using entrance channel spins and evaporation barriers derived from fusion data. Alterations are required in both the emission barriers and the moments of inertia. Extensive nuclear deformation could explain the $^{4}$He data but discrepancies remain with the $^{1}$H spectra, suggesting that additional effects are needed in the models.

21683 **Heavy-ion resonances.** Erb, K.A.; Bromley, D.A. (Oak Ridge National Lab., TN). pp 201-310 of Treatise on heavy-ion science. Vol. 3. Bromley, D.A. (ed.). New York, NY; Plenum Publishing Corp. (1985). Contract W-7405-ENG-26.

The objective is to survey what has been learned from the enormous effort of the last two decades and to identify promising areas for further investigation. The discussion is organized partly along the lines suggested by the different types of energy-dependent structure observed. Section 2 deals with the sharp resonances observed at low energies, particularly in collisions of $^{12}$C + $^{12}$C and $^{12}$C + $^{16}$O nuclei. Section 3 discusses gross structure in quasielastic reactions, typified by the broad bumps with widths and spacings of some 4 to 5 MeV, and then considers its fragmentation into the narrow resonances evident in the figure. Section 3 concludes with a discussion of the qualitatively different, very broad structure seen at the highest energies. Those resonances that appear primarily in extreme forward or backward angle data are treated separately in Section 4. Section 5 deals with energy-dependent structure in fusion yields, while resonances in systems with A $\geqq$ 40 are discussed in Section 6.

21684 **Transuranium nuclei.** Seaborg, G.T.; Loveland, W.D. (Lawrence Berkeley Lab., CA). pp 255-330 of Treatise on heavy-ion science. Vol. 4. Bromley, D.A. (ed.). New York, NY; Plenum Publishing Corporation (1985). Contract AC03-76SF00098;AT06-78ER70035.

In this chapter from Treatise on Heavy-Ion Science, volume 4, the authors review the state of knowledge of transuranium elements. The history of the discovery of the transuranium elements is outlined. The nuclear and chemical properties of these elements are presented and techniques for identifying them as products of heavy ion reactions are discussed. Different techniques for producing transuranium elements are presented. The chapter concludes with a discussion of future directions for research in this field.

21685 **Spin flip excitations in light nuclei.** Castel, B.; Van Hees, A.G.; Sagawa, H.; Zamick, L. (Oak Ridge National Lab., Oak Ridge, TN 37830). pp 458-463 of International symposium on nuclear shell models. Vallieres, M.; Wildenthal, B.H. Philadelphia, PA; World Scientific Pub. Co. (1984). (CONF-8410144—).

From International symposium on nuclear shell model; Philadelphia, PA, USA (31 Oct 1984).

The authors present a shell model analysis of electric spin excitations taking /sup 16/O as an example. They also discuss more generally the experimental and theoretical situation as it relates to

electric spin resonances and their coexistence with other S=O states.

21686 **Baryon-baryon interaction from quark model viewpoint.** Oka, M.; Yazaki, K. (Center for Theoretical Physics, Lab. for Nuclear Science and Dept. of Physics, Massachusetts Institute of Technology, Cambridge, MA 02139). pp 489-567 of Quarks and nuclei. Weise, W. Philadelphia, PA; World Scientific Pub. Co. (1984).

The study of the baryon-baryon interaction based on the non-relativistic quark cluster model is reviewed. The structure of the wave functions for three- and six-quark systems and the description in terms of the resonating group method (RGM) are studied. The Hamiltonian for the multi-quark system is discussed in connection with the problem of the space truncation and the color van der Waals force. The results of applications to nucleon-nucleon, nucleon-hyperon and hyperon-hyperon systems are summarized. The state dependence of the short-range repulsion and its origin are examined. The comparison with the bag model is briefly discussed. A realistic model of the nuclear force is constructed and its off-shell property is examined. The quark model version of the di-hyperon state is also discussed.

21687 **Nuclear tests of Lepton number and CP nonconservation.** Haxton, W.C. (Institute for Nuclear Theory, Univ. of Washington, Seattle, WA 98195). pp 471-487 of International symposium on nuclear shell models. Vallieres, M.; Wildenthal, B.H. Philadelphia, PA; World Scientific Pub. Co. (1984). (CONF-8410144—).

From International symposium on nuclear shell model; Philadelphia, PA, USA (31 Oct 1984).

The author discusses two topics, double beta decay and time-reversal-odd nuclear moments, in which questions of nuclear structure are addressed. These problems are taken from a growing class of nuclear and atomic experiments in which the special properties of many-body systems are exploited to test properties of elementary particles. Nuclei can serve as filters for interactions by providing kinematic "windows" where only certain processes can occur and by isolating quantum numbers such as spin, isospin, and parity.

21688 **Some high spin states shell model studies in the 88 ≦A≦ 100 region.** Amusa, A. (Physics Div., Argonne National Lab., Argonne, IL). pp 596-609 of International symposium on nuclear shell models. Vallieres, M.; Wildenthal, B.H. Philadelphia, PA; World Scientific Pub. Co. (1984). (CONF-8410144—).

From International symposium on nuclear shell model; Philadelphia, PA, USA (31 Oct 1984).

The results of shell model calculations for the states of /sup 95/Rh, /sup 94/Ru, /sup 91/Tc, /sup 89/Nb and /sup 87/Y using a (2rho/sub 1/2/1g/sub 9/2/)/sup eta/ model space and N=50, Z=38 shell closures are presented. Apart from the case of /sup 87/Y, the results support the observed excitation energies and decay modes in each nucleus. Extra model space mixing is invoked for the structures of yrast and yrare 25/2/sup -/ and 29/2/sup -/ states in /sup 91/Tc, and the 19/2/sup -/ state in /sup 89/Nb in order to explain experiment and also to explain the absence of seniority isomers in /sup 94/Ru and /sup 95/Rh.

21689 **New symmetry regions in the IBA and a simplified approach to nuclear phase transitions.** Casten, R.F. (Brookhaven National Lab., Upton, NY 11973). pp 90-122 of International symposium on nuclear shell models. Vallieres, M.; Wildenthal, B.H. Philadelphia, PA; World Scientific Pub. Co. (1984). (CONF-8410144—).

From International symposium on nuclear shell model; Philadelphia, PA, USA (31 Oct 1984).

The IBA treatment of nuclear symmetries and transition regions is discussed. A new, extensive region of 0(6) nuclei near A=130 is presented and compared with the Pt isotopes. Nearly identical level schemes characterize both regions, including similar relations between the 0(6) and 0(5) steps in the dynamical symmetry chain decomposition, and similar discrepancies with the 0(6) limit. Simple calculations that incorporate a triaxial component as an 0(6) symmetry breaking mechanism remove these discrepancies in both regions.

21690 **Extension of the consistent Q Formalism to odd-A nuclei in the W-Pt region.** Warner, D.D.; Van Isacker, P.; Jolie, J.; Bruce, A.M. (Brookhaven National Lab., Upton, NY 11973). pp 156-169 of International symposium on nuclear shell models. Vallieres, M.; Wildenthal, B.H. Philadelphia, PA; World Scientific Pub. Co. (1984). (CONF-8410144—).

From International symposium on nuclear shell model; Philadelphia, PA, USA (31 Oct 1984).

It is shown that the approach of the Consistent Q Formalism, which has proved successful in the Interacting Boson Model description of even-even nuclei, can be extended to odd A nuclei within the framework of the Interacting Boson-Fermion Model. The proposed method describes the transition between the SU(3) and O(6) symmetry limits of the U(6/12) boson fermion group, and can be applied to the odd neutron W, Os, Pt nuclei. As in the even-even case, a number of parameter-free predictions emerge for the transitional region concerning energies, B(E2) values and also single particle structure factors, and some of these are compared to existing data for the odd Os nuclei.

21691 **Low-lying isovector excitations in heavy nuclei.** Ginocchio, J.N. (Theoretical Div., Los Alamos National Lab., Los Alamos, NM 87545). pp 220-233 of International symposium on nuclear shell models. Vallieres, M.; Wildenthal, B.H. Philadelphia, PA; World Scientific Pub. Co. (1984). (CONF-8410144—).

From International symposium on nuclear shell model; Philadelphia, PA, USA (31 Oct 1984).

The neutron-neutron and proton-proton effective interaction in nuclei is qualitatively different than the neutron-proton effective interaction in nuclei. This difference can lead to low-lying isovector J/sup $\pi$/=2/sup +/ states in heavy nuclei. This paper explores the consequences of this effective nucleon-nucleon interaction for producing low-lying isovector neutron-proton excitations in nuclei. These excitations are studied using the Neutron-Proton Interacting Boson Model (IBM-2) which treats the neutron-proton degrees of freedom explicitly.

21692 **Methods for deriving nuclear single particle potentials.** Kuo, T.T.S. (Dept. of Physics, State Univ. of New York at Stony Brook, Stony Brook, NY 11794). pp 315-330 of International symposium on nuclear shell models. Vallieres, M.; Wildenthal, B.H. Philadelphia, PA; World Scientific Pub. Co. (1984). (CONF-8410144—).

From International symposium on nuclear shell model; Philadelphia, PA, USA (31 Oct 1984).

In treating nuclear many-body problems Hpsi = Epsi with H = T + V/sub NN/, an important step is to introduce a single-particle (s.p.) potential U and rewrite H as H/sub 0/+H/sub 1/ with H/sub 0/ = T+U and H/sub 1/ = V/sub NN/-U. An example is the nuclear shell model which may be considered as a choice of U = 1/2 m$\omega$/sup 2/r/sup 2/ and the belief that this U should "minimize" H/sub 1/ so that it can be replaced by some residual effective interaction. The authors discusses two methods for defining and deriving U: a model-space Hartree-Fock approach and a Green's function effective mass operator approach. The connection between these two approaches is discussed. Applications of the model-space Hartree-Fock U to nuclear matter calculations using Paris and Reif nucleon-nucleon potentials have led to encouraging results. Comparing with the conventional lowest order BHF calculations of nuclear matter, our present calculations give an additional binding energy of — 4 MeV per nucleon. Possibilities of using these approaches to the study of nuclear shell-model s.p. potentials are discussed.

21693 **g-factor measurements on excited states.** Hill, J.C.; Wohn, F.K.; Wolf, A.; Berant, Z.; Gill, R.L.; Mach, H.; Rafailovich, M.; Kruse, H.; Wildenthal, B.H.; Peaslee, G. (Ames Lab. USDOE, Iowa State Univ., Ames, IA 50011). pp 398-409 of International symposium on nuclear shell models. Vallieres, M.; Wildenthal, B.H. Philadelphia, PA; World Scientific Pub. Co. (1984). (CONF-8410144—).

From International symposium on nuclear shell model; Philadelphia, PA, USA (31 Oct 1984).

A program for the measurement of g-factors for excited states of neutron-rich nuclei at the TRISTAN separator facility is described. The authors determine effective proton spin and orbital g-factors of two odd-Z nuclei and are able to reproduce observed g-factors for five even-even nuclei.

21694 **Microscopic analysis of angular momentum projected HFB-states in terms of interacting bosons.** Ring, P.; Pannert, W. (Nuclear Science Div., Lawrence Berkeley Lab., Univ. of California, Berkeley, CA 94720). pp 426-434 of International symposium on nuclear shell models. Vallieres, M.; Wildenthal, B.H. Philadelphia, PA; World Scientific Pub. Co. (1984). (CONF-8410144—). Contract AC03-76SF00098.

From International symposium on nuclear shell model; Philadelphia, PA, USA (31 Oct 1984).

Angular momentum- and number-projected Hartree-Fock-Bogoliubov (HFB) wavefunctions for transitional and deformed Rare Earth nuclei are analyzed in terms of Fermion pairs coupled to angular momenta L = 0(S), 2(D), 4(G), etc. The Fermion space is truncated to contain only S-D for S-D-G pairs. The variation is carried out before and after angular momentum projection and with different truncations. The influence of the truncation on physical quantities such as moments of inertia, quadrupole moments or pair-transfer matrix elements is discussed.

21695 **Occurrence of intruder states at single and double subshell closure.** Meyer, R.A.; Henry, E.A.; Molnar, G.; Yates, S.W.; Sistemich, K. (Lawrence Livermore National Lab., Livermore, CA 94550). pp 435-446 of International symposium on nuclear shell models. Vallieres, M.; Wildenthal, B.H. Philadelphia, PA; World Scientific Pub. Co. (1984). (CONF-8410144—).

From International symposium on nuclear shell model; Philadelphia, PA, USA (31 Oct 1984).

Evidence is presented in support of coexisting structures near and at single and double SUBshell closure.

21696 **Shell-model Lanczos-method studies of the Gamow-Teller strength function in astrophysics.** Mathews, G.J.; Bloom, S.D.; Takahashi, K.; Fuller, G.M.; Hausman, R.F. (Lawrence Livermore National Lab., Livermore, CA 94550). pp 447-457 of International symposium on nuclear shell models. Vallieres, M.; Wildenthal, B.H. Philadelphia, PA; World Scientific Pub. Co. (1984). (CONF-8410144—).

From International symposium on nuclear shell model; Philadelphia, PA, USA (31 Oct 1984).

The authors utilize the Livermore system of vectorized shell-model codes to study the Gamow-Teller strength functions for a variety of nuclei whose weak-interaction properties are of interest in astrophysics. The Lanczos method is used to diagonalize a model space consisting of low-seniority excitations (including all states directly populated by the Gamow-Teller operator) with a realistic finite-range effective interaction. The effects of model-space truncation are systematically investigated for each nucleus. The results of these calculations are discussed in connection with problems in stellar evolution, supernova collapse, and nucleosynthesis.

21697 **Consistency and A-dependence of empirical effective interactions.** Daehnick, W.W. (Nuclear Physics Lab., Univ. of Pittsburgh, Pittsburgh, PA 15260). pp 645-649 of International symposium on nuclear shell models. Vallieres, M.; Wildenthal, B.H. Philadelphia, PA; World Scientific Pub. Co. (1984). (CONF-8410144—).

From International symposium on nuclear shell model; Philadelphia, PA, USA (31 Oct 1984).

Many shell model interaction matrix elements for configuration spaces as large as a complete major shell can be measured directly with transfer reactions. Some earlier, seemingly contradictory data in the A=90 region have been re-investigated. The results show that the use of centroid energies, i.e. the measurement and inclusion of the weaker fractions of the spectroscopic strengths, is required for the extraction of more generally valid matrix elements.

21698 **Projected Hartree-Fock calculations in the (SD) shell using realistic effective interactions.** Osnes, E.; Brut, F. (Dept. of Physics, State Univ. of New York at Stony Brook, Stony Brook, NY 11794). pp 711-727 of International symposium on nuclear shell models. Vallieres, M.; Wildenthal, B.H. Philadelphia, PA; World Scientific Pub. Co. (1984). (CONF-8410144—).

From International symposium on nuclear shell model; Philadelphia, PA, USA (31 Oct 1984).

The authors have performed projected Hartree-Fock calculations of the positive parity states in the A = 21 nuclei using three different realistic effective interactions. One of these was evaluated in the so-called screened Tamm-Dancoff approximation using the Hamada-Johnston potential while the other two were evaluated from the Bonn-Julich and Paris potentials including essentially all important long-range correlations to all orders. The resulting energy spectra show reasonable agreement with the experimental spectra and compare favorably with the results obtained using the Kuo-Brown and Preedom-Wildenthal interactions. Further, the calculation approximately reproduces the results of particle-rotor model calculations and thus accounts for the rotational features of these nuclei.

21699 **Continuum shell model calculations and the resonances below the GDR in /sup 12/C.** Ramavataram, S. (Dept. of Nuclear Energy, National Nuclear Data Center, Brookhaven National Lab., Upton, NY 11973). pp 728-736 of International symposium on nuclear shell models. Vallieres, M.; Wildenthal, B.H. Philadelphia, PA; World Scientific Pub. Co. (1984). (CONF-8410144—).

From International symposium on nuclear shell model; Philadelphia, PA, USA (31 Oct 1984).

It is shown that definitive spin, and parity assignments can be made for several dominant resonances reported in literature. Comparison with recent (e,e') data analysis not only confirms the authors' model predictions but also demonstrates that level energies are well reproduced within the multiconfigurational shell model only if continuum effects are included.

21700 **Estimate of p + d → $^3$He → γ contribution to the radiative capture reaction p + d → $^3$He + γ at T/sub p/ = 450 MeV.** Prats, F.; Briscoe, W.J. (George Washington Univ., Washington, DC). pp 283-284 of Few body problems in physics. Vol.II. Zeitnitz, B. (ed.). New York, NY; Elsevier Science Publishers B.V. (1984).

The contribution of the process p + d → $^3$He + γγ for the kinematical conditions of the p-d radiative capture coincidence measurements of B.H. Silverman et al. (T/sub p/ = 450 MeV and theta(c.m.) = 60° and 90°) has been calculated assuming that the two photon emission is due to virtual $\pi^0$ production. Measured angular distributions for pd→He$\pi^0$ at kinematical conditions were used for a reliable estimate of absolute value $T^2$. It is found that the two photon contribution is at least five orders of magnitude smaller than the single photon radiative capture and, thus, cannot contribute significantly to the yield measured in that experiment.

21701 **Methods of fluid dynamics in nuclear physics.** Zweifel, P.F. (Virginia Polytechnic Institute and State Univ., Blacksburg). *Transport Theory and Statistical Physics;* 13: No. 5, 649-661(1984). Contract AS05-80ER10711.

From Methods of fluid dynamics in nuclear physics; Catania, Italy (9-11 Apr 1984).

The author summaries the contributions to an interdisciplinary workshop attended by physicist and mathematicians at the University of Catania in Italy. The purpose of the workshop was to bring together physicists and mathematicians with an interest in fluid mechanical calculations. Several applications to nuclear structure and heavy ion collisions are outlined.

21702 **Dynamics.** Moniz, E.J. (Massachusetts Institute of Technology, Cambridge). pp 251-283 of Symmetries in nuclear structure. Abrahams, K.; Allaart, K.; Dieperink, A.E.L. (eds.). New York, NY; Plenum Publishing Corporation (1983). Contract AC02-76ER03069.

These lectures discuss the properties and interactions with nuclei of Δ's. To do so, the authors must establish first a common idea about what a Δ is. This will be the topic of discussion in Chapter II, wherein an isobar model is developed which allows us to discuss precisely the propagation and dynamics of the Δ as an unstable particle. In Chapter III, the extraction of Δ-nucleus interaction parameters from an analysis of intermediate energy pion- and photon-initiated nuclear reactions is discussed. The central result is the strength of the Δ-nucleus optical potential, which is found to have a large imaginary part associated with intermediate coupling to purely nuclear states (i.e., pion annihilation channels). The isospin signature provided by the pion annihilation dynamics both lends support to this interpretation and leads to new predictions for inelastic pion reactions. Finally, in Chapter IV the role of Δ's in low energy nuclear properties is described. This subject has received considerable attention because of the special role played by the Δ in nuclear spin-isospin excitations (the Δ is a static spin-flip nucleon excitation in the quark model). Focus will be on the ambiguities inherent in such discussions both because of the dynamical nature of the resonance discussed in Chapter II and because the quarks are the true nucleon internal degrees of freedom.

21703 **Polarization of nucleons elastically scattered from nuclei.** Snow, G.A.; Sternheimer, R.M.; Yang, C.N. (Brookhaven National Lab., Upton, NY). pp 169-170 of Selected papers 1945-1980 - with commentary. Chen Ning Yang. San Francisco, CA; W.H. Freeman and Company (1983).

Reprinted from Physical Review; 94: No.4, 1073-1074(15 May 1954).

Several recent experiments have shown that protons of energy 200-350 Mev scattered from nuclei are polarized. The elastically scattered proton have a polarization (~ 60%) that is somewhat larger than the inelastically scattered ones. Fermi has proposed an explanation of the polarization for elastic scattering in terms of a nuclear spin-orbit interaction potential similar to that assumed in the nuclear shell model. The authors used the Born approximation in their estimates. The purpose of this note is to investigate the polarization effects of a nuclear spin-orbit potential using the transparent nuclear model of Serber.

21704 **(CONF-861102—40) Monte Carlo-narrow resonance calculational techniques for treating double-heterogeneity effects.** Gelbard, E.M.; Chen, I.J. (Argonne National Lab., IL (USA)). 1986. Contract W-31109-ENG-38. 7p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87004747.

From American Nuclear Society and Atomic Industrial Forum joint meeting; Washington, DC, USA (16 Nov 1986).

Reliable methods already exist for computing resonance integrals (RI's) in regular lattices. But lattice structures always contain irregularities. Such effects have been called "double-heterogeneity" effects. Two methods for computing double heterogeneity effects on RI's are reviewed and evaluated. 2 refs., 1 tab.

21705 **(FEI—1739) Interaction of slow neutrons with water in near- and subcritical region. Analysis of translational part of scattering law.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.). 1985. 20p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700871.

From the experimental scattering law (SL) of slow neutrons with water being in post-critical state (t=400 deg C) separated is its translational part (SLTP) that is analysed on the basis of two-phase model and is used to extract information on triple correlations in water and to compare with forecasts of generalized kinetic theory. A possibility is shown to describe the slow neutron scattering cross section with subcritical water of the two-phase model; relative concentrations of liquid and gas phases found proceeding from this description agree satisfactorily with those obtained before. Isothermal pressure derivative from SLTP is obtained. A comparison of natural experimental semiwidth of SLTP with forecasts of generalized kinetic theory has shown that even at post-critical temperatures and moderated densities translational motion of water steam molecules can not be described by the solid sphere model, but demonstrates effects connected with the influence of intermolecular attraction forces. 20 refs.; 6 figs.

21706 **(HMI—394) HMI Department of Nuclear Chemistry and Reactor. Scientific report 1982.** (Hahn-Meitner-Institut fuer Kernforschung Berlin G.m.b.H. (Germany, F.R.). Bereich Kernchemie und Reaktor). 1983. 157p. (In German). NTIS (US Sales Only), PC A08/MF A01. File Number DE87751282.

This report depicts in brief the essential issues of R and D work carried out within the various departments of the Institute in 1982. Such are: in the field of 'neutron scatter': observation of critical phenomena with incoherent neutron scatter; in the field of 'radiation damage to solids': irradiation-induced diffusion, nucleation and dissociation in metals and alloys; in the field of 'reactor chemistry': radiation effects in selected crystalline phases of solidificated high-activity wastes; in the field of 'trace elements in bio-medicine': investigation of the biological function of selenium with respect to reproduction as values work on paraplacental exchange of Cd and Pb during pregnancy; in the field of 'geochemistry': investigation of aqueous geochemical systems under hydrothermal pressure and temperature conditions; in the field of 'reactor operation': periods of shutdown owing to faulty operation, expansion planning, utilization for irradiation experiments. The report also includes comprehensive lists of publications and lectures.

21707 **(HMI-B—419) HMI Department of Nuclear Chemistry and Reactor. Scientific report 1984.** (Hahn-Meitner-Institut fuer Kernforschung Berlin G.m.b.H. (Germany, F.R.). Bereich Kernchemie und Reaktor). 1985. 163p. (In German). NTIS (US Sales Only), PC A08/MF A01. File Number DE87751283.

The report gives an account of ongoing R and D work in the following fields: 1) Neutron scattering (method development, crystallography); 2) Damage to solids due to radiation (i.a. reactions to failure, atom transport, changes in material properties); 3) Reactor chemistry (solidification products far radioactive wastes; gas/graphite reactions within the first wall of a fusion reactor); 4) Biomedical trace element research (transport and storage of bioelements, trace element analytics); 5) Geochemical reservoir exploration technique (distribution of elements, complexing etc.); 6) Reactor operation, utilization and possible extensions. Furthermore, a survey is given on publications and lectures as well as on correlations with other fields of research.

21708 (INIS-mf—10565, pp 50-52) **Total cross sections of ultracold neutron interaction with lead and quartz glass.** Antonov, A.V.; Isakov, A.I.; Kuznetsov, S.P.; Meshkov, I.V.; Perekrestenko, A.D. 1985. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780085.

Kratkie Soobshcheniya po Fizike. No. 3.

In Experimental and theoretical physics. Collection.

Total cross sections of ultracold neutron interaction with Pb and quartz glass are investigated at 293 and 160 K temperatures using the ultracold neutron spectrometer.

21709 **(SAND—86-2300C) ITS: The integrated tiger series of coupled electron/photon Monte Carlo transport codes.** Halbleib, J.A.; Mehlhorn, T.A. (Sandia National Labs., Albuquerque, NM (USA)). 17 Nov 1986. Contract AC04-76DP00789. 4p. (CONF-8611115—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE87003504.

From Nuclear explosives code development conference; Albuquerque, NM, USA (17 Nov 1986).

ITS is a powerful and user-friendly software package permitting state-of-the-art Monte Carlo solution of linear time-integrated coupled electron/photon radiation transport problems, with or without the presence of macroscopic electric and magnetic fields of arbitrary spatial dependence. Our goal has been to simultaneously maximize operational simplicity and physical accuracy. Through a machine portable utility that emulates the basic features of the CDC UPDATE processor, the user selects one of eight codes for running on a machine of one of four (at least) major vendors. The ease with which this utility is applied combines with an input

scheme based on order-independent descriptive keywords that makes maximum use of defaults and internal error checking to provide experimentalists and theorists alike with a method for the routine but rigorous solution of sophisticated radiation transport problems. Physical rigor is maximized by employing the best available cross sections and sampling distributions, and the most complete physical model for describing the production and transport of the electron/photon cascade from 1.0 GeV down to 1.0 keV. Flexibility of construction permits the more sophisticated user to tailor the codes to specific applications and to extend the capabilities of the codes to more complex applications through simple update procedures.

21710 **Electronic polarization induced in solids traversed by fast ions.** Gemmell, D.S.; Vager, Z. (Argonne National Lab., IL). pp 243-284 of Treatise on heavy-ion science. Vol 6. Bromely, D.A. (ed.). New York, NY; Plenum Publishing Corporation (1985). Contract W-31-109-ENG-38.

In this chapter from Treatise on Heavy-Ion Science, Volume 6, the response of the electrons in a solid target to the passage of a fast positively charged ionic projectile is discussed. Fast, in this context, means projectile velocities, v, large compared with the Fermi velocities of the target electrons, but not so large that a relativistic treatment is required. That is, $v_0 << v << c$, where $v_0$ is a Bohr velocity, $e^2/h$. This corresponds to projectile energies lying in the range roughly between 0.1 and 10.0 MeV/nucleon. The restriction here to nonrelativistic velocities is just for convenience; in general the extension of the discussion to relativistic projectile velocities is straightforward. The primary concern is the polarization wake that is induced in a solid during its traversal by a fast ion. Theoretical models for the wake are renewed and some recent experiments with molecular-ion beams are described.

21711 **Completeness theorems in transport theory.** Zweifel, P.F. (Virginia Polytechnic Institute and State Univ., Blacksburg). *Transport Theory and Statistical Physics;* **13**: No. 1-2, 57-67(1984). Contract AS05-80ER10711.

Ever since K. M.; Case's famous 1960 paper, transport theorists have been studying the questions of full- and half-range completeness for various transport type equations. The purpose of this note is to try to define exactly what is meant by completeness as it is needed, and used, in solving transport equations and to discuss some of the various techniques which have been, or might be, used to verify completeness. Attention is restricted to the question of full-range completeness. As a paradigm the generalized form of the transport equation first introduced by Beals is adopted.

21714 (INIS-BR—568) **Estimation of effective dose equivalents from external irradiations.** (Minas Gerais Univ., Belo Horizonte (Brazil)). Jul 1985. 96p. (In Portuguese). NTIS (US Sales Only), PC A05/MF A01. File Number DE87700916.

A methodology for computing effective dose equivalent, derived from the computer code ALGAM: Monte Carlo Estimation of Internal Dose from Gamma-ray Sources in a Phantom Man, developed at Oak Ridge National Laboratory, is presented. The modified code was run for 12 different photon energy levels, from 0.010 Mev to 4.0 Mev, which provides computing the absorved dose, for these energy levels, in each one of the 97 organs of the original code. The code also was run for the principal energy levels used in the calibration of the dosimetric films. The results of the absorved doses per photon obtained for these levels of energy have been transformed in effective dose equivalents. (M.A.C.).

21715 (INIS-mf—10570, pp 97-109) **Assessment of nuclear power sources in Czechoslovakia with respect to radiation protection limits.** Melichar, Z. (Vyskumny Ustav Energeticky, Jaslovske Bohunice, Czechoslovakia). 1985. (In Slovak). NTIS (US Sales Only), PC A03/MF A01. File Number DE87701462. (CONF-8505340—Exc.).

From Prediction of environmental impact of power generation conference; Bratislava, Czechoslovakia (23 May 1985).

The principles are presented which underlie the determination of limits of planned population exposure during normal operation of nuclear installations and of reference levels of exceptional population exposure during nuclear power plant accidents. The introduction is discussed of authorized limits and levels in Czechoslovakia the USSR, CMEA countries and Sweden. An estimate is made of the radiation burden of the population during the development of the Czechoslovak nuclear power programme. (E.S.).

21716 **(PPA-C—7.1) Manual on theory and practical aspects of bioassay.** (Unit Tenaga Nuklear, Bangi, Selangor (Malaysia)). Jun 1985. 77p. (In Malay). Nuclear Energy Unit, Kompleks PUSPATI, 43000 Kajang (MY).

This manual is set to provide necessary basic guidance on theory and practical aspects of bioassay specially for the newcomer in this field and the man in the laboratory. The first part is a brief information on the entry of radionuclides into the body, the metabolism and the programs of bioassay. All other factors to be considered in assessing internal contamination in man have also been brought up. In the second part, various procedures of radiochemical separations, detection and measurements are abstracted from journals and other revisions. Some methods have been attempted and to be followed where appropriate.

21717 **(AD-A—175560/2/XAB) Nondestructive evaluation of dislocations in iron single crystals by positron annihilation.** Park, Y.K.; Waber, J.T. (Northwestern Univ., Evanston, IL (USA)). Jul 1986. 8p. NTIS, PC A02/MF A01.

Published in Proceedings of APCS, 353-358(3-5 Jul 1986).

A new nondestructive method for determining dislocation density was introduced. The positron lifetime spectrum was analyzed to separate the screw- and edge-dislocation components in pure iron single crystals. The dislocation density measured by the positron annihilation technique was compared with the result of transmission electron microscopy (TEM). Recovery stages in pure iron single crystals were studied using positron-annihilation Doppler broadening.

21718 **(AD-A—175601/4/XAB) Dislocation studies on deformed single crystals of high-purity iron using positron annihilation: determination of dislocation densities.** Park, Y.; Waber, J.T.; Meshii, M.; Snead, C.L.; Park, C.G. (Northwestern Univ., Evanston, IL (USA). Dept. of Materials Science and Engineering). 15 Jul 1986. 15p. NTIS, PC A02/MF A01.

Published in Physical Review B, Vol. 34, No. 2 823-836(15 Jul 1986).

A new method for determining the total number of dislocations per unit area, as well as the fraction of screw and edge components, is presented. Single-crystal specimens that have been a) bent over a mandrel, b) cold rolled at room temperature, and c) deformed in tension at 200 K were studied. Etch pits were studied in

connection with this work and were found to be primarily of the (111) type. The density of emergent dislocations as determined by the etch pits was found to be smaller than the number determined by the positron-annihilation technique.

21719 **(CONF-8609252—1) Charge exchange processes between highly charged ions and metal surfaces.** Meyer, F.W.; Havener, C.C.; Overbury, S.H.; Snowdon, K.J.; Zehner, D.M.; Heiland, W.; Hemme, H. (Oak Ridge National Lab., TN (USA); Osnabrueck Univ. (Germany, F.R.)). 17 Sep 1986. Contract AC05-84OR21400. 17p. NTIS MF A01; 2; GPO Dep. File Number DE87005778.

From Conference on the physics of multiple charged ions; Groningen, Netherlands (17 Sep 1986).

The interaction of highly charged ions (argon, nitrogen, and oxygen) with metal surfaces (gold single crystal) causes the emission of electrons. Energy spectra of the emitted electrons reveal, for sufficiently high charge states of the projectile, the occurrence of Auger deexcitation of projectile inner shell vacancies brought into the interaction as well as inter-atomic charge exchange leading to the emission of target Auger electrons. 25 refs., 5 figs.

21720 **(DOE/ER/53167—1) Cesium ion bombardment of metal surfaces: Final report for period January 1984 to May 1986.** Seidl, M.; Carr, W.; Tompa, G.S. (Stevens Inst. of Tech., Hoboken, NJ (USA)). May 1986. Contract AC02-84ER53167. 130p. NTIS MF A01; 2; GPO Dep. File Number DE87005704.

The steady state Cs coverage due to $Cs^+$ bombardment of polycrystalline Mo and W has been studied for the incident energy range below 500 eV. When a sample is exposed to a $Cs^+$ ion beam, the work function decreases until steady state is reached with a total dose of less than $\simeq 1*10^{16}$ ions/cm$^2$, for both W and Mo. A steady state minimum work function surface is produced at an incident energy of $\simeq$100 eV for Mo and at an incident energy of $\simeq$45 eV for W. At a given bombarding energy the Cs coverage of W is uniformly less than that of Mo. H coadsorption does not have a large effect on the steady state work function. A theory describing the steady state coverage has been developed and is used to make predictions for other materials. 94 refs., 37 figs.

21721 **(EFI—746(61)-84) Radiation energy losses of relativistic electrons and positrons at plane channeling and quasichanneling.** (Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR)). 1984. 20p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700859.

A model potential of continuous crystallographic planes, very close to the Moliere-Appleton potential, but allowing analytical solution of equation of motion is introduced. Total radiation energy loss of relativistic electrons and positrons at plane channeling and quasichanneling in a diamond single crystal is calculated for particle trajectories by means of the expressions obtained. Angular distributions of radiation loss as a function of the particle entrance angle into the crystal are investigated. 8 refs.; 6 figs.

21722 **(FEI—1627) Mechanisms of interstitial loop formation in metals under low radiation doses.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.). 1984. 19p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700865.

The process of interstitial loop formation in metals at the initial period of radiation is theoretically investigated. Comparison of the obtained analytical estimations of limiting loop concentration with experimental data permits to obtain such characteristics of point defects as migration energy of host interstitial (HI), binding energy of two HI as well as migration and binding energies of the complex HI-atom impurity. Experimental data on concentration of interstitial loops in Ni, Fe and Au at low radiation doses are discussed. 18 refs.; 7 figs.

21732 **(IAE—3954/2) Nuclear magnetic gamma double resonance.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1984. 52p. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87700874.

A number of problems corresponding to different variants of experiments using nuclear magnetic-gamma double resonance (NMGDR) are theoretically investigated. Calculation is carried out and its results are compared to experimental ones concerning NMGDR for tantalum. Time dynamics of the source or scatterer nucleus sublevel populations under double resonance conditions with non-uniform initial population of this nucleus sublevels is studied. 10 refs.; 22 figs.

21733 **(IAE—4073/9) By layer analysis of structural perfection of monocrystal near surface layers by the asymptotic Bragg diffraction.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1985. 16p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700879.

Using three-crystal X-ray diffractometry angular dependences of intensity of pure diffractive X-ray scattering I(THETA) in Ge and Si monocrystals (with a natural oxide film on the surface) are investigated with the angles of crystal turn from the position of Bragg peak exceeding more than 500 times its half-width. I(THETA) dependence at such large angles of turn (ΔTHETA) possesses information on the change of statistical and dynamical Debye-Waller factors along the crystal depth with the resolution order of 1 nm. In the theory when condidering diffraction averaged according to large number of planes scattering characteristics are used due to weak interaction of X-rays with the crystal. Because of high resolution in the method of asymptotic Bragg diffraction the necessity of by-layer accounting for the variation of scattering characteristics (Debye-Waller factor) and for interplane distance occurred for the first time. General theoretical analysis of the problem is presented. Debye-Waller factors on the crystal-oxide film barrier are restored. 7 refs.; 7 figs.; 1 tab.

21734 **(IAE—4084/11) Sputtering by nuclear fragments.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1985. 24p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700880.

Theory of monocrystal and polycrystal metal sputtering by nucleus fission fragments is constructed. The target material destruction occurs at the expense of energy; released in the electronic subsystem. The process of hot electron area formation around the fragment trajectory and the mechanism of hot electron energy transfer to the central atoms at the polycrystal grain boundary and at the metal-vacuum boundary are considered. The monocrystal sputtering coefficient constitutes approximately 50; the maximum sputtering coefficient for the fine-grained polycrystals constitutes approximately 10/sup 5/ at/fr. 12 refs.; 3 figs.; 4 tabs.

21735 **(IAE—4128/9) Reconstruction of parahydrogen phonon density from neutron data. Multiphonon process consideration.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1985. 19p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701398.

An iterative method for calculation of a phonon density function g(epsilon) of solid parahydrogen according to data on in elastic non-coherent scattering of low-velocity neutrons under conditions of a considerable contribution of multiphonon processes is described. For polycrystals at T=12 K and p=30 bar the function g(epsilon) and the series of its integral characteristics are obtained. Analysis of the results points to essential effect of anharmonism of zero oscillations of g(epsilon). 5 figs.

21736 **(IC—86/21) Skin friction on the unsteady free convection flow past an accelerated vertical porous plate.** (International Centre for Theoretical Physics, Trieste (Italy)). Jan 1986. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701396.

In this paper the unsteady laminar free convection flow of a viscous incompressible fluid, past an accelerated infinite vertical porous plate subjected to a constant suction (or injection) is considered. Numerical results for the skin friction on the plate are obtained for the class of accelerated motions whose velocity is of the form U/sub O/t/sup n/ where t is time, U/sub O/ a constant and n is a positive integer. The skin friction tends to zero with increasing t when the Grashof number Gr=λ/sup 2/, the Prandtl number σ=1, n=0 and λ>0 which corresponds to suction. 12 refs, 2 figs, 1 tab.

21737 **(IC—86/25) Effect of submerged obstacles on circular fronts propagating into water at rest.** (International Centre for Theoretical Physics, Trieste (Italy)). Mar 1986. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701397.

In this paper, the effect of vertical walled obstacles on circular fronts propagating on the surface of shallow water is discussed. The amplitude of the transmitted acceleration waves is determined together with a recurrence relation for the reflection and transmission coefficients at successive obstacle walls. 11 refs.

21738 **(IC—86/77) Potentials and scattering cross sections for collisions of He atoms with adsorbed CO.** (International Centre for Theoretical Physics, Trieste (Italy)). May 1986. 33p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87701388.

Ab initio calculations of the total scattering cross section for the collision system He -> CO/Pt(111) within the renormalized distorted wave Born approximation are reported. The interaction potential for this atom-adsorbate system consists of the usual two-body gas phase-like potential as well as two additional substrate mediated van de Waals contributions, all with similar long range behaviour. Comparison of the calculated cross sections for various incident velocities and angles with available experimental data is made without using any adjustable parameters to fit the data, and the importance of including the substrate-mediated forces is emphasized. 27 refs, 6 figs, 1 tab.

21739 **(IC—86/105) Oblique target transmission technique in measuring stopping powers.** (International Centre for Theoretical Physics, Trieste (Italy)). Jun 1986. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701390.

The stopping powers for aluminium, nickel and gold for 1.0 to 5.0 MeV helium-3 have been measured using a technique known as Oblique Target Transmission (OTT), which has been developed to measure stopping powers. Data have been analyzed using an investigation method and results compared with semi-empirical calculations. A preliminary investigation to minimize energy spread of outgoing particles is also reported. 7 refs, 6 figs, 2 tabs.

21740 **(IC—86/130) Microwave TRAPATT oscillator properties.** (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701392.

A study of the operation of the TRAPATT diode oscillation as function of the diode parameters is given. Silicon diodes of both p/sup +/nn/sup +/ and n/sup +/pp/sup +/ structures are used and results are compared. A tunable circuit over the entire S-band frequency range is employed. The optimum performance is obtained at frequencies of 2.6 GHz and 3.65 Ghz. The diode-circuit interaction effects on the dc characteristics of the oscillator have been measured. It has been observed that the operating voltage of the TRAPATT oscillator is dependent to a great extent upon the circuitry than upon the diode used in the oscillator. The voltage collapse as function of the diode efficiency and a comparison of the power-efficiency for both p/sup +/nn/sup +/ and its complementary n/sup +/pp/sup +/ diodes are given. Finally the effects of the diode are on the RF power output and efficiency has been determined. 7 refs, 6 figs.

21741 **(IC—86/136) Calculation of the unsteady flow in vaneless diffusers by the partially-parabolic method.** (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 24p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701393.

Experimental investigations have shown that the flow discharged from a centrifugal compressor or pump impeller into the diffuser is unsteady and contributes for additional losses in the diffuser. The partially parabolic method is used to calculate this flow in the diffuser and reveals the mechanism of smoothing the distort-

ed flow downstream. Calculated results are compared with measurements and good agreement is found. 9 refs, 13 figs.

21742 **(IC—86/141) Surface phonon polaritons in semi-infinite semiconductor superlattices.** (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701394.

Surface phonon polaritons in a semi-infinite semiconductor superlattice bounded by vacuum are studied. The modes associated with the polaritons are obtained and used to obtain the dispersion relation. Numerical results show that polariton bands exist between the TO and LO phonon frequencies, and are found to approach two surface mode frequencies in the limit of large tangential wave vector. Dependency of frequencies on the ratio of layer thicknesses is shown. Results are illustrated by a GaAs-GaP superlattice bounded by vacuum. 10 refs, 5 figs.

21743 **(IC—86/147) Uniformly valid asymptotic solution of the surface wave problem due to underwater sources.** (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701395.

The two-dimensional linearized problem of surface waves in water of finite (or infinite) depth due to a stationary periodic source situated at a finite depth below the free surface, is considered. The formal solution of the problem is derived by using Laplace and Fourier transforms. A uniformly valid asymptotic expansion of the wave integral is obtained by using the method of Bleistein in the case of finite depth and that of Vander Waerden in the case of infinite depth. Physical interpretation of the results so derived is given. 9 refs.

21744 (INIS-SU—378, pp 35-38) **Behaviour of frequences of antiferromagnetic resonance in YFeO/sub 3/ in magnetic field.** Balbash, A.M.; Mandel'shtam, T.S.; Nikitin, S.I.; Prokhorov, A.S. 1985. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780101.

Kratkie Soobshcheniya po Fizike. No.2.

In Experimental and theoretical physics. Collection.

The behaviour of two modes of antiferromagnetic resonance in YFeO/sub 3/ in the magnetic field up to 12 kE is investigated. It is shown that the main contribution to weak ferromagnetism in YFeO/sub 3/ is made by the antisymmetrical exchange.

21748 **(IPEN-Pub—98) Determination of the Dauphine twinning volume fraction induced in a natural quartz crystal using neutron diffraction.** (Instituto de Pesquisas Energeticas e Nucleares, Sao Paulo (Brazil)). Feb 1986. 15p. (In Portuguese). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701399.

The Dauphine twinning volume fraction of a natural quartz crystal has been determined by neutron diffraction. The crystal shaped into a cylinder 5 cm height x 5cm diameter was submitted to the $\alpha$->$\beta$->$\alpha$ phase transformations before the measurements. Several intensity ratios I sub(hk.l) /I(sup(--) sub(hk.l)) were measured at room temperature, after the heat treatment employed in the phase transformations. The various pairs of reflections hk.l - hk sup(--) were chosen for their sensitivity as Dauphine - twinning indicators. The experimental intensity ratios were compared to theoretical curves, representing the variation of the ratio chemical bondF sub(hk.l) chemical bond/sup 2//chemical bondF(sub(hk) sup(--) sub(.l))chemical bond/sup 2/ as function of the Dauphine twinning volume fraction x, in order to obtain several values of x for the secondary Dauphine twinning produced by the inversion at 573/sup 0/C. An average value of x was found to be 0.5, which is commonly found in natural quartz. For comparison and evaluation of the method employed, the twinning volume fraction has also been determined for a synthetic quartz single crystal shaped into a 3cm x 3cm x 0.8cm orthogonal prism. For this sample the value of x was found to be 0.18, which is higher than usually found for synthetic quartz.

21749 **(JINR—14-85-893) Damage formation in synthetic diamond at high energy ion implantation.** (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions). 1985. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701401.

Submitted to the journal Sov. Phys. - Semicond. .

Damage structure in synthetic diamond irradiated with carbon ions at 82 MeV within the 10sup(14) - 10sup(16) cmsup(-2) dose range was investigated by the cathode- and photoluminescence methods. Significant influence of crystal lattice damages on spectral characteristics of optic active centers has been found. It manifests itself in broadening of phononless lines in luminescence spectra (from 2 upto 17 MeV for the 575 nm centre line) and weakening of electron-phonon interaction. Dose dependence of phononless lines of luminescence centres has a threshold character with a critical dose in the 3 x 10sup(15) cmsup(-2) region. 10 refs.; 6 figs.

21750 **(JINR—R-14-85-726) Neutron diffraction study of Ba(TiCo)/sub 2/Fe/sub 8/O/sub 19/ magnetic structure.** (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics). 1985. 6p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701493.

From 8. Conference on neutron application in solid physics; Riga, USSR (1985).

The neutron diffraction analysis of the Ba(TiCo)/sub 2/Fe/sub 8/O/sub 19/ compound in the temperature range from 4.2 to 290 K is carried out. Co-existence of the heliocoidal magnetic structure of the SS-type and the collinear antiferromagnetic one is found-out. The helicoidal structure has a block character, the spiral coherence length along c vektor axis is approximately 150 A at T = 77 K, the spiral period is incommeasurable with the atomic one all over the temperature range and increases beginning from 36 A at T = 4.2 K upto 210 A at T = 290 K. The dimension of regions with antiferromagnetic ordering is not less than 500 A. The supposition is made that the character of the Ba(TiCo)/sub 2/Fe/sub 8/O/sub 19/ magnetic structure is due to inhomogeneity of Fe/sup 3+/ ion substitution in nonequivalent crystallographic positions occurring at low (Ti+Co) concentrations. 6 refs.; 6 figs.

21751 **(NAC—86-03) Doping of silicon by laser-induced diffusion.** (Council for Scientific and Industrial Research, Pretoria (South Africa). National Accelerator Centre). 1986. 19p. (In English and Afrikaans). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701400.

This report gives information on the doping of silicon by laser-induced diffusion, modelling and heat-flow calculation, doping from evaporated layers and silicon self-diffusion during pulsed laser

irradiation. In order to tailor dopant profiles accurately a knowledge of the heat flow and the melt depths attained as a function of laser energy and material type is crucial. The heat flow calculations described can be used in conjuntion with most diffusion equations in order to predict the redistribution of the deposited dopant which occurs as a result of liquid phase diffusion during the melting period. Doping of Si <100> was carried out by evaporating thin films of Sb, In and Bi 10 to 300 A thick, onto the substrates. During pulsed laser irradiation the dopant film and underlying silicon substrate is melted and the dopant incorporated into the crystal lattice during recrystallization. Radioactive /sup 31/Si(T1/2=2,62h) was used as a tracer to measure the self-diffusion of silicon in silicon during pulsed laser (pulsewidth = 30ns, wavelength = 694nm) irradiation.

21752 **(PNL-SA—14175) Raman characterization of molecular bonding and phase homogeneity in thin optical films.** Exharos, G.J. (Pacific Northwest Lab., Richland, WA (USA)). Jul 1986. Contract AC06-76RL01830. 9p. (CONF-860880—47). NTIS, PC A02. File Number DE87006400.

From 30. SPIE technical symposium on optics and optoelectronic engineering; San Diego, CA, USA (17 Aug 1986).

Submicrometer dielectric films have been analyzed by Raman spectroscopic techniques with respect to phase composition and homogeneity. Residual film stress has also been evaluated from measured vibrational band shifts in sol-gel as well as sputter-deposited films using available data from bulk studies of the pressure dependence on Raman frequencies. Dynamic studies of temperature and laser-induced phase transformations have been performed in situ, suggesting the applicability of this technique for film analysis during deposition. The potential advantages and limitations associated with Raman characterization of thin dielectric films will be addressed in this review using examples from current research in this area. 22 refs., 9 figs.

21753 **(SAND—86-2471C) Molecular reactions at the film surface in plasma polymerization.** Buss, R.J. (Sandia National Labs., Albuquerque, NM (USA)). 1987. Contract AC04-76DP00789. 10p. (CONF-870410—4; CONF-870410—4). NTIS, PC A02/MF A01; GPO Dep. File Number DE87002488.

From 193. national meeting of the American Chemical Society; Denver, CO, USA (5 Apr 1987).

During the plasma polymerization process, the surface of the depositing material is continuously bombarded by a multitude of plasma generated species: ions, photons, radicals and other neutral molecules. In understanding the chemistry of the plasma polymerization process it is desirable to know the way in which these species interact with the film during deposition. Any individual molecule/surface collision may result in growth of the film by an attachment reaction, or in ablation by chemical or physical removal of previously attached atoms. Reported here are results of experiments designed to probe the reaction of molecules undergoing single collisions with the surface of a plasma-polymerized film during the deposition process. The method employed was a molecular beam sampling of all the plasma species and deposition of polymer from the beam onto a substrate. Control of the charged particle fluxes to the surface was used to study the role of ion bombardment. A beam of a probe molecule, incident on the film surface throughout the deposition, was used to investigate the interaction of the probe molecule with the surface. 6 refs., 3 figs.

21754 **Atomistic study of structural metastability in coherently strained Si-like layers.** Dodson, B.W. (Sandia National Laboratories, Albuquerque, New Mexico 87185). *Physical Review* [*Section*] *B: Condensed Matter;* **35**: No. 11, 5558-5562(15 Apr 1987).

Comparison of experimental values for critical mismatch of coherently strained semiconductor films with the predictions of equilibrium theories suggests that metastable structures with much greater critical mismatch than predicted by equilibrium theory can often be grown in practice. One possible mechanism for loss of coherence in such metastable structures is the generation of misfit dislocations in an initially perfect overlayer by nucleation of half-loop of misfit dislocation at the surface of the strained layer. The mismatch threshold for zero-temperature loss of coherence associated with this half-loop dislocation nucleation mechanism, which does not occur in the continuum model, is calculated using atomistic Monte Carlo techniques on a coherently strained layer composed of a model siliconlike material. The instability threshold for a 10-A-thick layer is found to be 11.2%, compared to the equilibrium critical mismatch of about 4%. Possible extensions of this approach to the problem of practical stability of coherently strained structures are discussed.

21755 **Self-affine fractal model for a metal-electrolyte interface.** Kaplan, T.; Gray, L.J.; Liu, S.H. (Solid State Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831-6032). *Physical Review* [*Section*] *B: Condensed Matter;* **35**: No. 10, 5379-5381(1 Apr 1987).

Fractal models of rough interfaces have provided a possible explanation for the observed ac response of an interface between a metal and an electrolyte with blocking contacts which displays the constant-phase-angle (CPA) behavior. For this system, two different relations between the exponent eta of the frequency dependence of the CPA element and the fractal dimension d/sub s/ of the interface have been proposed. By solving for the properties of a self-affine fractal model of an interface and using Mandelbrot's box dimension for the fractal dimension it is demonstrated that there is no universal relation in which eta is simply a function of d/sub s/.

21756 **Secondary-ion emission from vanadium as a function of incident ion mass and energy in the range 25—275 keV.** Blauner, P.G.; Weller, R.A. (A.W. Wright Nuclear Structure Laboratory, Yale University, New Haven, Connecticut 06511). *Physical Review* [*Section*] *B: Condensed Matter;* **35**: No. 4, 1485-1491(1 Feb 1987).

Measurements of the intensities of low-energy secondary ions emitted from clean and oxidized polycrystalline vanadium surfaces under (25—275)-keV $He^+$, $Ne^+$, $Ar^+$, and $Kr^+$ bombardment are reported. Whereas the intensities of the metallic-ion species are observed to be proportional to the sputtering yield of vanadium and, therefore, dependent on elastic energy deposition, the intensities of $O^+$ ions are not. Rather, they increase linearly with increasing projectile velocity in a manner similar to the electronic stopping power or, equivalently, to the yield of secondary electrons. While the production of metallic ions may be described adequately by a number of the proposed models of secondary-ion emission, that of $O^+$ cannot. The possibility that $O^+$ is produced by a mechanism similar to electron-stimulated desorption is discussed.

21757 **Transition from free molecule to collisional flow during vaporization into vacuum by the test-particle method.** Tsai, C.; Olander, D.R. (Department of Nuclear Engineering, University of California and Materials and Molecular Research Division, Lawrence Berkeley Laboratory, Berkeley, California 94720). *Physics of Fluids;* **30**: No. 2, 386-392(Feb 1987). Contract AC03-76SF00098.

A test-particle method was developed to estimate the conditions that lead to collision-dominated evaporation during pulse heating of a solid surface in vacuum. The method consists of calculating the number density of evaporated molecules above the surface neglecting collisions and then sending a test particle through this cloud. The probability that the test particle escapes from the cloud without making a collision is the measure of the importance of intermolecular collisions during the blow off. The method is applied to heating of a —1 cm diam spot on the surface with a heat pulse of —1 msec duration. These conditions characterize laboratory laser vaporization experiments intended to measure the vapor pressures of refractory solids at very high temperatures. The principal variable which determines the escape probability is the maximum surface temperature during the transient. When applied to laser heating of uranium dioxide, collisional effects in the vapor are predicted to begin at a maximum surface temperature between 2600 and 2800 K.

21758 **Time dependence of desorbed ground-state lithium atoms following pulsed-electron-beam irradiation of lithium fluoride.** Green, T.A.; Loubriel, G.M.; Richards, P.M.; Tolk, N.H.; Haglund R.F. Jr. (Sandia National Laboratories, Albuquerque, New Mexico 87185). *Physical Review [Section] B: Condensed Matter;* **35**: No. 2, 781-787(15 Jan 1987).

Recent experiments have shown that during the irradiation of lithium fluoride crystals by a chopped electron beam the signal of desorbed ground-state lithium atoms continues for times up to seconds in the beam-off period. A quantitative model is presented which connects the desorption of lithium atoms with the diffusion of lithium fluoride F centers to the surface. The model thus introduces a new source of time delay (F-center diffusion) in the desorption of ground-state metal atoms from alkali halides. Formerly it has been supposed that the delay occurred entirely during the surface desorption step. The model fits the experimental data very well, and should be applicable to other similar systems. For the cases considered here, F-center diffusion turns out to be the primary source of delay in the Li-atom signal. The model suggests some new directions for investigation.

21759 **Stability of dendritic crystals.** Kessler, D.A.; Levine, H. (Department of Physics, University of Michigan, Ann Arbor, Michigan 48109). *Physical Review Letters;* **57**: No. 24, 3069-3072(15 Dec 1986).

We present an integrodifferential-operator formulation of the problem of linear stability around the selected needle crystal pattern in dendritic crystal growth. We show by explicit computation that (a) all members of the discrete set of allowed steady states aside from the fastest are unstable and (b) the fastest such shape is linearly stable at least for large enough anisotropy. We comment on the implications of our work for the issue of side-branch wavelength determination.

21760 **Effective mass of neutrons diffracting in crystals.** Zeilinger, A.; Shull, C.G.; Horne, M.A.; Finkelstein, K.D. (Department of Physics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *Physical Review Letters;* **57**: No. 24, 3089-3092(15 Dec 1986).

Neutrons propagating in a crystal under diffraction conditions exhibit an effective inertial mass which is lower by 5—6 orders of magnitude than their vacuum rest mass and of both positive and negative sign. This is verified experimentally by measurement of the enormously enhanced deflection of neutrons subjected to a magnetic force while passing through a silicon crystal.

21761 **Distance of excited-state formation in ion-surface collisions.** Burgdoerfer, J.; Kupfer, E. (University of Tennessee, Knoxville, Tennessee 37996 and Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Physical Review Letters;* **57**: No. 21, 2649-2652(24 Nov 1986). Contract AC05-84OR21400.

We present the first numerical results of a multichannel theory for resonant charge exchange in ion-surface scattering at grazing incidence. The time-dependent Schroedinger equation describing resonant exchange can be solved in the adiabatic approximation for the slow perpendicular motion. As an initial application the state dependence of the distance of formation in the H($n = 2$) following specular reflection of protons at a gold surface is determined.

21762 **Dislocation generation in the two-dimensional Frenkel-Kontorova model at high stresses.** Lomdahl, P.S.; Srolovitz, D.J. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review Letters;* **57**: No. 21, 2702-2705(24 Nov 1986).

Dislocation generation is studied in a generalized two-dimensional Frenkel-Kontorova model which allows consideration of dislocations of arbitrary Burgers vector and line shape. Two new mechanisms for dislocation generation at high stresses have been found: (1) heterogeneous nucleation of dislocations on preexisting dislocations and (2) generation of dislocation loops in the wake of a moving dislocation. These new mechanisms provide an understanding of how materials generate the density of dislocations required to accomodate arbitrary strains at high strain rates.

21763 **Tunneling exchange, supersymmetry, and Riccati equations.** Kumar, P.; Ruiz-Altaba, M.; Thomas, B.S. (Department of Physics, University of Florida, Gainesville, Florida 32611). *Physical Review Letters;* **57**: No. 21, 2749-2751(24 Nov 1986).

We propose a variational formalism, based on supersymmetry, for the calculation of the tunneling exchange integral. Good numerical results are obtained with minimal effort.

21764 **Ab initio calculation of coverage-dependent adsorption properties of H on Pd(001).** Tomanek, D.; Louie, S.G.; Chan, C. (Department of Physics, University of California, Berkeley and Center for Advanced Materials, Lawrence Berkeley Laboratory, Berkeley, California 94720). *Physical Review Letters;* **57**: No. 20, 2594-2597(17 Nov 1986). Contract AC03-76SF00098.

The preferential adsorption sites, bond lengths, and vibration frequencies for H on the Pd (001) surface are determined by use of the ab initio pseudopotential local-orbital method. From the calculated total energies we derive a coverage-dependent adsorption energy in very good agreement with experiment. We establish that at low coverages ($\theta \leq 1$), H occupies fourfold hollow sites. At higher coverages ($1 < \theta \leq 2$), islands of bridge-bonded H (local coverage $\theta = 2$) are predicted to coexist with regions of H in hollow sites.

21765 **Electrical conductivity of a strongly coupled plasma.** Rinker, G.A. (Los Alamos National Lab., NM). *Physical Review [Section] B: Condensed Matter;* **31**: No. 7, 4207-4219(1 Apr 1985).

This is the first in a series of papers concerning the electrical and thermal transport properties of dense plasmas. Temperatures and densities considered range approximately from room temperature to $10^4$ eV and from $10^{-4}$ to $10^4$ times compressed. In the present work they describe theoretical calculations of electrical conductivities using the t-matrix version of the Ziman theory with various self-consistent ionic potential models and realistic structure factors. The theoretical basis is described, and illustrative results are given.

21766 **Molecular-dynamic simulations of many-particle systems: new faces on old problems.** Wallace, D.C. (Los Alamos National Lab., NM). pp 521-563 of Electronic structure, dynamics, and quantum structural properties of condensed matter. Devreese, J.T.; Van Camp, P. (eds.). New York, NY; Plenum Publishing Corporation (1985).

Computer simulation techniques of the molecular dynamics of many-particle condensed matter systems are described. A basic description of equilibrium molecular dynamics is given and methods of data analysis are discussed. Calculations of metallic sodium are presented as an example of the type of data to be expected from molecular dynamic techniques.

21767 **Moessbauer-effect isomer shifts.** Shenoy, G.K. (Argonne National Lab., IL). pp 57-76 of Moessbauer spectroscopy applied to inorganic chemistry. Vol. 1. Long, G.J. (ed.). New York, NY; Plenum Publishing Corporation (1984). Contract W-31-109-ENG-38.

Perhaps the most significant aspect of Moessbauer spectroscopy is the discovery of the isomer shift. The measurement of the isomer shift provides unique information regarding the nature of the chemical bond, not easily available from other microscopic techniques. It would be no exaggeration to say that the isomer shift measurements have provided a new depth in the qualitative and quantitative evaluation of the chemical structure of condensed systems. In this chapter an exposition of the isomer shift is presented without recourse to vigorous mathematical formulations. The procedures used in the calibration of the isomer shift scale are discussed with some illustrations. The reader is presented with examples of the use of the isomer shift in the evaluation of chemical structures with specific discussions on various correlations.

21768 **Trace surface analysis with Pico-Coulomb ion fluences: direct detection of multiphoton ionized iron atoms from iron-doped silicon targets.** Pellin, M.J.; Young, C.E.; Calaway, W.F.; Gruen, D.M. (Argonne National Lab., IL). *Surface Science;* **144**: 619-637(1984).

A system for surface analysis is described which has the objective of maximizing the probability of detection of atoms sputtered from the sample. Resonance ionization techniques have been combined with pulsed ion-induced erosion to detect and count Fe atoms sputtered from Fe and Fe in Si samples without the interposition of a mass spectrometer between the target and the detector (direct detection). At present, surface analysis by resonance ionization of sputtered atoms (SARISA) allows determination at the fifty parts per million (ppm) level of Fe doped into Si with removal of less than $10^{-5}$ of a monolayer. Separation of the Fe impurity from the isobaric $Si_2$ dimers is accomplished in the resonant photo-excitation step. Improvements in the method are suggested which, if successful, would bring the sensitivity into the parts per billion (ppb) range with primary ion currents remaining low enough to produce negligible surface damage. The quantitative and element specific nature of the SARISA technique is established by demonstrating that the ground state neutral fraction is essentially unchanged in two very different matrixes (Fe and Si). Also presented are measurements of the low-lying excited state fraction of Fe atoms sputtered both from an Fe and a Si matrix. 45 references, 5 figures, 2 tables.

21769 **Nonlinear optical probes of interfaces.** Heinz, T.F.; Tom, H.W.K.; Shen, Y.R. (Lawrence Berkeley Lab., CA). *Laser Focus;* vp(May 1983). Contract AC03-76SF00098.

The laser has become an indispensable tool for investigating the bulk properties of matter, but it has not been widely exploited in the study of surfaces and interfaces. During the last few years, however, several promising applications of lasers to surface science have appeared. One line of research takes advantage of the laser's ability to probe surfaces and interfaces. Lasers can, for example, be used to obtain information about the molecule/surface interaction by detecting transitions in molecules scattered from surfaces. Laser-induced desorption and surface photoacoustic spectroscopy can yield vibrational spectra of molecules adsorbed on surfaces. Considerable progress has also been made in the development of surface probes based on nonlinear optical effects. These purely optical methods have an important role to play in surface studies. Unlike the conventional probes of surface science, which rely on the emission, absorption, or scattering of massive particles, they are generally applicable to interfaces between two dense media and, therefore, offer some unique and intriguing possibilities. In this article, a brief discussion of these techniques is given.

21770 **Interaction of monoenergetic positrons with solid surfaces.** Dale, J.M.; Hulett, L.D. Jr.; Pendyala, S. (Oak Ridge National Lab., TN). *Applied Spectroscopy Reviews;* **19**: No. 1, 105-165(1983). Contract W-7405-ENG-26.

A review of the theory and applications of positron interactions with solid surfaces is presented. After a general introduction to positrons the author describes the development of monoenergetic positron sources from a historical perspective. Positron detection is then discussed. Other sections review applications to the study of solids via diffraction and surface spectroscopy and positron studies in atomic and molecular physics.

21771 **(CONF-870424—3) Multidimensional linear-linear nodal transport methods in weighted diamond difference form.** Azmy, Y.Y. (Oak Ridge National Lab., TN (USA)). Jan 1987. Contract AC05-84OR21400. 16p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87004399.

From American Nuclear Society international meeting on advances in reactor physics, mathematics and computation; Paris, France (27 Apr 1987).

A computer program that solves two-dimensional transport problems using the LN (linear nodal), LL (linear linear), or the BL (bi-linear) method was written and was used to solve two simple test problems. The results are used here to confirm our algebraic manipulations of the nodal equations and also to compare the performance of the three methods from the computational, as well as the theoretical, point of view. The three methods are found to have comparable accuracies, especially on meshes that are sufficiently fine. It is apparent that a given method will be more appropriate to use for solving certain problems than the other two methods, depending on the specifications of the problem.

21772 **(CONF-8608157—2) Thermodynamic properties of molten salt solutions.** Blander, M. (Argonne National Lab., IL (USA)). 15 Aug 1986. Contract W-31109-ENG-38. 39p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87004948.

From Advanced study institute on molten salt chemistry; Camerino, Italy (3 Aug 1986).

Why is it important to understand the thermodynamic properties of molten salt solutions, and what aspect of these properties is most important. In technologies and sciences where molten salts, slags or magmas are used or studied, one often must calculate the extent of a chemical reaction or of phase equilibria. In order to do this we need to know an equilibrium constant which can be generally written as $\Delta G^0 = RT\ln K$. The equilibrium constant K is a function of compositions and activity coefficients, the two quantities necessary to define chemical potentials, $\mu$ K = K(X,$\gamma$). Thus, in order to calculate the concentrations of the final equilibrium product, X, one needs a knowledge of $\Delta G^0$ and of the activity coefficients $\gamma$. The calculation of $\Delta G^0$, the standard free energy change for reactants and products in their standard states (generally the pure salts) is obtained from calorimetric data or other types of equilibrium data on pure compounds. I will not touch on this since this is another field and a large fraction of the data molten salt chemists need is already available. This paper investigates a way to calculate activity coefficients using chemical potentials. Mathematical models are presented for binary and ternary mixtures.

21773 **(CONF-8609254—1) Physics with magnetic charges and electric currents.** Lipkin, H.J.; Peshkin, M. (Argonne National Lab., IL (USA); Weizmann Inst. of Science, Rehovoth (Israel)). Sep 1986. Contract W-31109-ENG-38. 10p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87004666.

From ISQM Tokyo '86; Tokyo, Japan (1 Sep 1986).

Hamiltonian theories with magnetic charges and electric currents exhibit paradoxes related to, but different from, those in theories with magnetic and electric charges. Investigation of these new paradoxes yields new insights into the physics obtained when both kinds of charges and currents are allowed. The electric charge in the Dirac quantization condition appears as the time integral of a current instead of as a coupling constant in the Lagrangian or Hamiltonian. 3 figs.

21774 **(DOE/ER/13123—3) Investigation of perturbation techniques for nonlinear difference equations and other related topics: Final technical report.** Mickens, R.E. (Atlanta Univ., GA (USA). Dept. of Physics). 29 Oct 1986. Contract AS05-83ER13123. 7p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006663.

Investigations in mathematical physics are summarized for projects concerning a nonlinear wave equation; a second-order nonlinear difference equation; singular, nonlinear oscillators; and numerical instabilities. All of the results obtained through these research efforts have been presented in seminars and professional meetings and conferences. Further, all of these results have been published in the scientific literature. A list of exact references are given in the appendices to this report.

21775 **(DOE/ER/13178—3) Fundamentals and techniques of nonimaging optics research at the University of Chicago: Technical progress report.** Winston, R.; O'Gallagher, J. (Chicago Univ., IL (USA)). 6 Nov 1986. Contract FG02-84ER13178. 21p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006917.

Nonimaging Optics differs from conventional approaches in its relaxation of unnecessary constraints on energy transport imposed by the traditional methods for optimizing image formation and its use of more broadly based analytical techniques such as phase space representations of energy flow, radiative transfer analysis, thermodynamic arguments, etc. Based on these means, techniques for designing optical elements which approach and in some cases attain the maximum concentration permitted by the Second Law of Thermodynamics were developed. The most widely known of these devices are the family of Compound Parabolic Concentrators (CPC's) and their variants and the so called Flow-Line or "trumpet" concentrator derived from the geometric vector flux formalism developed under this program. Applications of these and other such "ideal" or "near-ideal" devices permits increases of typically a factor of four (though in some cases as much as an order of magnitude) in the concentration above that possible with conventional means. A comprehensive review of the development of the whole field through mid-1983 was presented in the previous renewal proposal and will not be repeated here. In the most recent phase, our efforts can be classed into two main areas; (a) "classical" geometrical nonimaging optics; and (b) logical extensions of nonimaging concepts to the physical optics domain. 8 refs., 1 fig.

21781 **(IC—86/54) Nonmetricity and torsion: Facts and fancies in gauge approaches to gravity.** (International Centre for Theoretical Physics, Trieste (Italy)). Apr 1986. 41p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87701352.

In general relativity, the Riemannian connection of spacetime is symmetric and metric-compatible. If we relax at first the symmetry, we arrive at a Riemann-Cartan spacetime U/sub 4/ with torsion. If we relax, additionally, the metric-compatibility, then we are led to a metric-affine spacetime (L/sub 4/,g) with nonmetricity and torsion. In Part 1 we turn to the (L/sub 4/,g) spacetime and review an appropriate framework for corresponding gravitational model theories. They can be understood as gauge approaches to the 4-dimensional affine group GL(4,R)xR/sup 4/. They embody, in addition to the ordinary "weak" gravitational field, a "strong" piece, which is mediated by the connection and coupled to the hypermomentum current. In Part 2, by putting the nonmetricity to zero, we turn to the subcase of the Poincare gauge theory. We show in some detail, how this dynamic torsion theory can look effectively Einsteinian from a macroscopic point of view. This applies also to the Einstein-Cartan theory, which is a special case of the Poincare gauge theory for "frozen" torsion. In Part 3 we present new exact solutions of the Poincare gauge theory with mass, electric charge, and NUT-parameter. The properties of the new solutions are discussed. 207 refs, 8 figs.

21782 **(IC—86/61) On the prolongation approach in three dimension for the conservation laws and lax-pair of B-O equation.** (International Centre for Theoretical Physics, Trieste (Italy)). May 1986. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701346.

The prolongation structure approach of Whalquist and Estabrook is used effectively in a new situation in relation to the integrodifferential type B-O equation (the Benjamin-Ono equation). The main clue lies in the possible differential equation representation of such equations in three dimension. Here it is shown how the usual analysis of prolongation structure can be utilized to deduce a Lax-pair for B-O type equation in three dimension. Effectiveness of the present approach is further demonstrated by an independent-derivation of some conservation laws associated with the equation. Lastly we reduce the whole formalism to two dimension to make contact with known results. 6 refs.

21783 **(IC—86/76) Painleve analysis for a class of coupled KdV system.** (International Centre for Theoretical Physics, Trieste (Italy)). Jun 1986. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701347.

We have made a Painleve analysis for some coupled KdV systems, other than that of Hirota and Satsuma. These equations are interesting from many aspects. Due to the coupling with the other non-linear equation sometimes the singularity on the solution manifold becomes logarithmic. Also it is seen that the position of the resonances depends upon the coupling parameters. We have analysed in detail the structure of resonances and the formation of the coefficients at the resonance positions following the methodology of Ablowitz et al. 7 refs.

21784 **(IC—86/78) Integrability of classical and semiclassical derivative non-linear Schroedinger equation with non-ultra-local canonical structure.** (International Centre for Theoretical Physics, Trieste (Italy)). May 1986. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701348.

Derivative non-linear Schroedinger equation exhibiting non-ultra-local canonical structure is investigated to obtain various relationships including classical r-s matrices and Yang-Baxter relation modified by the non-ultra-locality. The complete integrability of the system is established through explicit action-angle canonical variables. An attempt has been made to solve the corresponding quantum field model in the semiclassical approximation. A possibility of eliminating non-ultra-locality of the model, necessary for exact quantum inverse scattering treatment, is demonstrated. 17 refs.

21785 **(IC—86/80) Exact realization of the Kac-Moody algebra.** (International Centre for Theoretical Physics, Trieste (Italy)). Jun 1986. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701349.

The Kac-Moody generators are explicitly realized as functional differential operators expressed in terms of the co-ordinates of the (infinite dimensional) group manifold. As an application of

this realization, the two-dimensional Wess-Zumino chiral action is derived from the Hamiltonian formulation. 14 refs.

21786 **(IC—86/90) Some existence theorems of critical points and applications.** (International Centre for Theoretical Physics, Trieste (Italy)). Jun 1986. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701350.

In this paper we will go into details of some existence theorems of critical points given recently. As applications, we consider the semilinear elliptic boundary value problem which has been investigated extensively in the last twenty years. 11 refs.

21787 **(IC—86/117) Operational method for the particle slowing down problem.** (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701343.

The direct operational method is used to transform the collision integral in the transport equation to a polynomial in derivatives with respect to lethargy. This polynomial is approximated by the Pade approximation technique. Different orders of Pade approximation give the well-known synthetic kernel. This procedure reduces the integro-differential form of the transport equation to differential form. It also gives us the possibility to consider energy dependent cross-section and to get the solution without using the integral transform method. We shall consider here the solution for infinite homogeneous medium and calculate the energy deposition factor for different orders of the Pade approximant. 5 refs, 2 tabs.

21788 **(IC—86/121) Schroedinger differential operator and intrinsic self adjointness.** (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701344.

An attempt is made to establish a hermitization procedure for rendering any linear differential operator to be intrinsically self adjoint, independently of any prescribed representation. This is accomplished by introducing an associate differential operator, which is simply a linear combination of all the individual ordinary differential operators belonging to the adjoint of the given linear differential operator, that satisfies the criterion of intrinsic self adjointness. It turns out that the associate differential operator is capable of generating an infinite set of hermitized versions of any arbitrary linear differential operator. Both momentum and kinetic energy differential operators that belong to the Schroedinger wave equation are rendered self adjoint. 10 refs.

21789 **(IC—86/122) Solitary waves in one-dimensional damped systems.** (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701345.

An analysis of general properties of travelling waves that can exist in one-dimensional damped systems is presented. It is shown that depending on the symmetry of the potential and the presence or absence of dissipation different classes of localized solutions in the form of kinks, pulses and semisolitons are possible. 11 refs, 5 figs.

21790 **(IFVE-OTF—85-115) Compact and noncompact gauge symmetries in N=2 supergravity.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1985. 16p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700911.

Submitted to the journal Nucl. Phys. .

The interaction of vector and scalar multiplets with N=2 supergravity is considered for the case when vector multiplets interact in a minimal way, and scalar ones correspond to non-linear $\sigma$-models of the type. Sp(2,2n)/Sp(2n)xSp(2n), SU(2, n)/SU(2)xSU(n)xU(1) and O(4, n)/O(4)xO(n). It is shown, that in these cases the gauge interactions of vector and scalar mesons may be introduced, in this the gauge may be either compact or noncompact. Several interesting concrete examples are given. 8 refs.

Kratkie Soobshcheniya po Fizike. No. 3.

In Experimental and theoretical physics. Collection.

It is proved that the group of gauge transformations of the arbitrary Sobolev class operates continually and properly in the corresponding space of fields. If these group does not form the Lie group and is just a topological one, this space is not included into the Sobolev type except two boundary cases.

21794 (INIS-SU—398, pp 42-60) **Grassman and para-Grassman variables and spin 1 massless particle dynamics.** Gershun, V.D.; Tkach, V.I. 1985. (In Russian). NTIS (US Sales Only), PC A05/MF A01. File Number DE87780090.

In Problems of nuclear physics and cosmic rays. No. 23. Republican Interinstitute scientific technical collection.

Lagrangian formalism and Poisson bracket formalism are generalized in case of the system described by a set of c-numerical values qsub(i)(i=1...n) and para-Grassman variables THETAsub($\alpha$)($\alpha$=1...N). Motion of massless particles with spin 1 both in para-Grassman and Grassman cases is considered in detail. The both variants are shown to lead to analogous description of the free massless particle with spin 1 in terms of the Daffin-Kemmer equation. 9 refs.

21795 (INIS-SU—398, pp 73-80) **On power-type cosmological solutions of the Brans-Dicke theory.** Roman'kov, V.V. 1985. (In Russian). NTIS (US Sales Only), PC A05/MF A01. File Number DE87780090.

In Problems of nuclear physics and cosmic rays. No. 23. Republican Interinstitute scientific technical collection.

Analysis of power-type cosmological solutions of the Brans-Dicke theory (BDT) is carried out. The observed data testify to the fact that the real Universe, beginning from the stage preceding nucleon synthesis and up-to nowadays, should be described either by Friedman or cosmological solutions in the form of rather similar to them. In the BDT such solutions are those, which transfer at free parameter values $\omega$ -> infinity into Friedman ones. The rest solutions can be considered as nonphysical ones. The BDT is shown to disagree fully with the Mach principle.

21796 **(ITEF—19(1985)) Some estimates in analytic theory of Hill absolute stability.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 34p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE87700966.

In frames of special "analytic" theory of Hill absolute stability in unbounded three-body problem (which is logically considered independent of a more general "geometric" stability theory) some new convenient parameters are introduced. Evident algebraic form of the theory basic equation is obtained. A new more exact estimation of the distance between bodies forming stable Hill pair is given. Efficiency of analytical theory developed here and earlier is tested on eight most interesting subsystems of three bodies within solar system (both considered earlier and relatively new), i.e. tasks are quite real. Broad numerical investigation became possible due to operation of a special BESM-6 computation program. In one case absolute Hill stability is firstly unexpected. In five out of seven the rest absolute Hill stability in the motion of corresponding body

pairs takes place and is resulted from the determined sufficient conditions. 21 refs.

21797 **(JINR—E-2-86-15) Quantum motion on a halfline connected to a plane.** (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1986. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701351.

Free motion of a particle on a manifold which consists of a one-dimensional and a two-dimensional parts connected in one point is treated. The class of admissible Hamiltonians is found using the theory of self-adjoint extensions. A particular attention is paid to those of them which allow the particle to pass through the point singularity; the reflection coefficient and other quantities characterizing scattering on the connection point are calculated. A possible physical application is discussed purpose the para-axial equations of motion, including charge exchange effects, has been studied for the system consisting of the quadrupole lenses. The dependence of final cross-over on beam current is discussed. 14 refs.; 2 figs.

21798 **(KFKI—1986-30/A) Universal master equation for the gravitational violation of quantum mechanics.** (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). Jun 1986. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701353.

A possible approach to the future unification of gravity and quantum theories is proposed: the effect of gravity on the propagation of quantum mechanical wave packets. The proposed master equation modifying the equation of motion for the density operator describes the gravitational damping of nondiagonal, state-mixing components. The relaxation time is determined by the non-overlapping of mass density distributions of the interfering quantum states. The estimation of the characteristic spatial and temporal sizes of the effect shows that in the case of nucleons and atoms the damping effect is ignorable, in the case of colloid grain particles the coherence radius of the wave packets is comparable with the physical size of the particle, and in the case of macroscopic objects the gravitational damping presses the wave function into a well-defined, well-separable classical state. The form and parameters of the Hawking indeterminancy of the gravitational field. (D.Gy.). 13 refs.

21799 **(LA-UR—87-519) Some progress in statistical turbulence theory.** Kraichnan, R.H. (Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 37p. (CONF-870359—1). NTIS, PC A03/MF A01; GPO Dep. File Number DE87006058.

From 5. seminar on magnetohydrodynamic flows and turbulance; Jerusalem, Israel (2 Mar 1987).

An examination is made of relationships among several approaches to analytical turbulence theory: approximation by finite sets of moments, renormalized perturbation theory, decimation under symmetry constraints, renormalization-group methods, and the upper-bounding of transport under integral constraints. Most of the discussion assumes isotropic turbulence. Decimation under symmetry constraints plays a unifying role. It promises a rational basis for renormalized perturbation theory and provides links to the other named approaches. 72 refs.

21800 **(LAFI—075) Large order perturbation theory for the Coulomb angular spheroidal equation.** (AN Latvijskoj SSR, Riga. Inst. Fiziki). 1985. 28p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE87701342.

The nature of perturbation theory for the Coulomb angular spheroidal equation (CASE) is considered. It has been shown that along with the power members of approximately (1/4p)sup(k), p - > infinity, there could be present approximately esup(-2sp) members and the integer of s >=1 in asymptotic expansion of eigenvalues. Coefficients of eigenvalue expansion into a power series of 1/4p have been found to be asymptotic by number, that allows to analyse the obtained CASE solutions for all the possible real values of the $\sigma$ parameter. The results obtained are used for studying electron terms of the Z/sub 1/eZ/sub 2/ ion. A comparison with some numerical results are presented. 15 refs.; 2 tabs.

21801 **(LBL—22470) Computational aspects of a non-cubic equation of state for phase-equilibrium calculations: Effect of density-dependent mixing rules.** Topliss, R.J.; Dimitrelis, D.; Prausnitz, J.M. (Lawrence Berkeley Lab., CA (USA); California Univ., Berkeley (USA). Dept. of Chemical Engineering). Sep 1986. Contract AC03-76SF00098. 11p. (CONF-870469—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87004474.

From CEF 87: the use of computers in chemical engineering; Taormina, Sicily, Italy (26 Apr 1987).

An efficient procedure is presented for solving a non-cubic equation of state for density. In phase-equilibrium calculations, the costly computing step is not the density calculation but the calculation of the equation-of-state constants for the mixture. Illustrative calculations are given for high-pressure phase equilibria for hydrogen/ethane and methane/water. These calculations show the superiority of non-cubic equations with density-dependent mixing rules.

21802 **(UCRL—95452) Equations of state for the dynamic consolidation of powders.** Reaugh, J.E. (Lawrence Livermore National Lab., CA (USA)). 30 Jan 1987. Contract W-7405-ENG-48. 16p. (CONF-8611140—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006239.

From 4. conference on rapid solidification processing; Santa Barbara, CA, USA (14 Nov 1986).

Computer simulations of the dynamic consolidation of rapidly solidified powders require an equation of state (EOS) to describe the response of the consolidating powder mass. Various dynamic consolidation geometries are sensitive to different areas of the EOS surface. We discuss the EOS models that have proven satisfactory, and the important regions of those EOS surfaces. 18 refs., 11 figs., 1 tab.

21803 **Approximate solution to the scattering integral for general interatomic potentials.** Blanchard, J.P.; Ghoniem, N.M.; Chou, S.P. (Department of Mechanical, Aerospace, and Nuclear Engineering, University of California at Los Angeles, Los Angeles, California 90024). *Journal of Applied Physics;* **61**: No. 8, 3120-3123(15 Apr 1987).

An approximation of the scattering integral is derived by expanding the potential about the distance of closest approach and truncating the expansion so that the integral can be performed analytically. The results are improved by using the approximate integrand only in the region near the closest approach, and assuming zero potential for large distances. The analytical solution, which requires little computation time relative to other solution methods, is shown to yield sufficient accuracy for a wide range of particle energies and impact parameters, using both the Moliere and "Universal" potentials.

21804 **Direct and inverse scattering for viscoelastic media.** Ammicht, E.; Corones, J.P.; Krueger, R.J. (Applied Mathematical Sciences, Ames Laboratory-USDOE, Iowa State University, Ames, Iowa 50011). *Journal of the Acoustical Society of America;* **81**: No. 4, 827-834(Apr 1987).

A time domain approach to direct and inverse scattering problems for one-dimensional viscoelastic media is presented. Such media can be characterized as having a constitutive relation between stress and strain which involves the past history of the strain through a memory function, the relaxation modulus. In the approach in this article, the relaxation modulus of a material is shown to be related to the reflection properties of the material. This relation provides a constructive algorithm for direct and inverse scattering problems. A numerical implementation of this algorithm is tested on several problems involving realistic relaxation moduli.

21805 **Phase organization.** Tang, C.; Wiesenfeld, K.; Bak, P.; Coppersmith, S.; Littlewood, P. (Physics Department, Brookhaven National Laboratory, Upton, New York 11973). *Physical Review Letters;* **58**: No. 12, 1161-1164(23 Mar 1987). Contract AC02-76CH00016.

We describe the selection mechanism for novel pattern formation in a driven chain of nonlinear oscillators. Phase organization arises as a consequence of dynamical selection of minimally stable states.

**21806 Group theoretical basis of some identities for the generalized hypergeometric series.** Beyer, W.A.; Louck, J.D.; Stein, P.R. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Journal of Mathematical Physics (New York);* **28**: No. 3, 497-508(Mar 1987). Contract W-7405-ENG-36.

It is shown that Thomae's identity between two ${}_3F_2$ hypergeometric series of unit argument together with the trivial invariance under separate permutations of numerator and denominator parameters implies that the symmetric group $S_6$ is an invariance group of this series. A similar result is proved for the terminating Saalschuetzian ${}_4F_3$ series, where $S_6$ is shown to be the invariance group of this series (or $S_5$ if one parameter is eliminated by using the Saalschuetz condition). Here Bailey's identity is realized as a permutation of appropriately defined parameters. Finally, the set of three-term relations between ${}_3F_2$ series of unit argument discovered by Thomae [J. Thomae, J. Reine Angew. Math. 87, 26 (1879)] and systematized by Whipple [F. J. Whipple, Proc. London Math. Soc. 23, 104 (1925)] is shown to be transformed into itself under the action of the group $S_6 \times \Lambda$, where $\Lambda$ is a two-element group. The 12 left cosets of $S_6 \times \Lambda$ with respect to the invariance group $S_5$ are the structural elements underlying the three-term relations. The symbol manipulator m-smcapsa-smcapsc-smcapss-smcapsy-smcapsm-smcapsa-smcaps was used to obtain preliminary results.

**21807 Numerical evaluation of path-integral solutions to Fokker-Planck equations. III. Time and functionally dependent coefficients.** Wehner, M.F.; Wolfer, W.G. (Lawrence Livermore National Laboratory, University of California, P.O. Box 5508, Livermore, California 94550). *Physical Review [Section] A: General Physics;* **35**: No. 4, 1795-1801(15 Feb 1987).

A path-integral solution to truly nonlinear Fokker-Planck equations is derived. Such equations exhibit in the drift and diffusion coefficients a functional dependence on the distribution function. This type of implicit time dependence is shown to introduce terms into the propagator function of the exact same order in the time step tau, as does an explicit time dependence if the functional dependence is sufficiently smooth. A standard discrete lattice formulation of the path integral is then used to reproduce the appropriate, truly nonlinear Fokker-Planck equation. This discrete formulation provides a basis for an efficient numerical algorithm and is applied with excellent results to several example problems where exact solutions can be calculated.

**21808 Diffusion of magnetic fields into conductors of nonuniform resistivity.** Sprott, J.C. (Department of Physics, University of Wisconsin, Madison, Wisconsin 53706). *Journal of Applied Physics;* **61**: No. 3, 817-821(1 Feb 1987).

Solutions are obtained for the spatial variation of electrical resistivity of cylindrical and rectangular conductors such that the magnetic field external to the conductor maintains a constant spatial variation as the magnetic field diffuses into the conductor. Practical implementations of the ideal solution are described.

**21809 Second-quantized molecular time scale generalized Langevin equation theory: Boson equivalent chain.** McDowell, H.K. (CLS-2 MS G738, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Journal of Chemical Physics;* **86**: No. 3, 1497-1508(1 Feb 1987).

A second-quantized version of molecular time scale generalized Langevin equation theory is developed in an equivalent chain format for quantum boson systems. The approach allows for nonlinear Hamiltonians and strong coupling to the bath. A bath average is defined which permits reduced dynamics prescriptions to be developed. The bath average is shown to be consistent with the notion that perturbations of a primary zone should damp away at long time.

**21810 Basis set methods for describing the quantum mechanics of a "system" interacting with a harmonic bath.** Makri, N.; Miller, W.H. (Department of Chemistry, University of California, and Materials and Molecular Research Division, Lawrence Berkeley Laboratory, Berkeley, California 94720). *Journal of Chemical Physics;* **86**: No. 3, 1451-1457(1 Feb 1987).

The case of a system (e.g., a one-dimensional reaction coordinate) coupled to a "bath" of many harmonic oscillators is treated by quantum mechanical basis set methods. By choosing the basis set for the bath to incorporate the coupling explicitly, it is shown how the bath can then be eliminated to obtain an effective Hamiltonian matrix for only the system. Numerical calculations are carried out which show that, even in the zeroth version of the approach, the effect on the system (e.g., the tunneling splitting in a double-well potential)= of coupling to the bath is described well, even when the effect is extremely large.

**21811 Direct and inverse scattering in the time domain for a dissipative wave equation. III. Scattering operators in the presence of a phase velocity mismatch.** Kristensson, G.; Krueger, R.J. (Division of Electromagnetic Theory, Royal Institute of Technology, S-100 44 Stockholm, Sweden). *Journal of Mathematical Physics (New York);* **28**: No. 2, 360-370(Feb 1987).

The direct scattering problem for an inhomogeneous lossy medium is examined for the one-dimensional case in which the phase velocity profile is discontinuous at the boundaries of the medium. Scattering operators (or impulse responses) and propagation operators are defined and equations that govern their behavior are developed. Knowledge of the scattering kernels for one round trip in the medium implies that the scattering kernels can be determined on any time interval. Numerical examples are presented. It is also shown that this scattering problem is reducible to one in which there are no phase velocity mismatches. This reduction provides considerable numerical advantage in the solution of the direct scattering problem. The inverse problem is examined in a companion paper.

**21812 Finite-size scaling and correlation lengths for disordered systems.** Chayes, J.T.; Chayes, L.; Fisher, D.S.; Spencer, T. (Laboratory of Atomic and Solid State Physics, Cornell University, Ithaca, New York 14853). *Physical Review Letters;* **57**: No. 24, 2999-3002(15 Dec 1986).

For a large class of d-dimensional disordered systems, we prove that if an appropriately defined finite-size scaling correlation length diverges at a nontrivial value of the disorder with an exponent $\nu$, then $\nu$ must satisfy the bound $\nu \geq 2/d$. Given the assumption that such a correlation length can be defined, the result applies to, e.g., percolation, disordered magnets, and Anderson localization, both with and without interactions. For localization, this puts stringent constraints on scaling theories and interpretation of experiments.

**21813 Devil's staircase.** Bak, P. (Brookhaven National Laboratory, Upton, New York). *Physics Today;* **39**: No. 12, 38-45(Dec 1986). Contract AC02-76CH00016.

When the interaction between an oscillator and its driver is strong enough, the oscillator will resonate at, or "lock" onto, an infinity of driving frequencies, giving rise to steps with a fractal dimension between 0 and 1.

**21814 Quantum distribution functions in nonequilibrium statistical mechanics.** O'Connell, R.F. (Louisiana State Univ., Baton Rouge, LA). pp 83-95 of Frontiers of nonequilibrium statistical physics. Moore, G.T.; Scully, M.O. New York, NY; Plenum Press (1986). (CONF-8406194—).

From NATO advanced study institute on nonequilibrium quantum statistical mechanics; Santa Fe, NM, USA (3 Jun 1984).

This paper concentrates on the inter-relationships between some of the more commonly used quantum distribution functions. For simplicity, a one-dimensional system in a pure state is represented since the case of a mixture in multi-dimensions presents no essential complications. This paper is concerned with the Wigner distribution function. The Cahill-Glauber class of generalized distribution functions are examined. A new class of generalized distribution functions is also presented.

21815 **Reduction of the wavepacket: how long does it take?.** Zurek, W.H. (Los Alamos National Lab., Los Alamos, NM). pp 145-149 of Frontiers of nonequilibrium statistical physics. Moore, G.T.; Scully, M.O. New York, NY; Plenum Press (1986). (CONF-8406194—).

From NATO advanced study institute on nonequilibrium quantum statistical mechanics; Santa Fe, NM, USA (3 Jun 1984).

This paper shows that the reduction of the wavepacket caused by the interaction with the environment occurs on a timescale which is typically many orders of magnitude shorter than the relaxation timescale tau. In particular, it is shown that in a system interacting with a canonic heat bath of harmonic oscillators decorrelation timescale of two pieces of the wavepacket separated by N thermal de Broglie wavelengths is approximately tau/$N^2$. Therefore, in the classical limit h to 0, dynamical reversibility (tau to $\infty$) is compatible with instantaneous coherence loss.

21816 **Maxwell's demon, Szilard's engine and quantum measurements.** Zorek, W.H. (Los Alamos National Lab., Los Alamos, NM). pp 151-161 of Frontiers of nonequilibrium statistical physics. Moore, G.T.; Scully, M.O. New York, NY; Plenum Press (1986). (CONF-8406194—).

From NATO advanced study institute on nonequilibrium quantum statistical mechanics; Santa Fe, NM, USA (3 Jun 1984).

The author proposes and analyzes a quantum version of Szilard's one-molecule engine. In particular, the author recovers, in the quantum context, Szilard's conclusion concerning the free energy "cost" of measurements (delta /sub F/ is greater than or equal to k/sub b/T1n2) per bit of information. A cycle of Szilard's engine is illustrated for both the original and quantum versions. The measurement of the location of the molecule is essential in the process of extracting work in both classical and quantum design. Measurements are made by the classical Maxwell's demon.

21817 **What are squeezed states really like?.** Nieto, M.M. (Los Alamos National Lab., Los Alamos, NM). pp 287-307 of Frontiers of nonequilibrium statistical physics. Moore, G.T.; Scully, M.O. New York, NY; Plenum Press (1986). (CONF-8406194—).

From NATO advanced study institute on nonequilibrium quantum statistical mechanics; Santa Fe, NM, USA (3 Jun 1984).

This paper discusses the simple harmonic oscillator, quantum mechanics and squeezed (coherent) states. The coherent states are discussed from the Schrodinger point of view and from the operator formalism. The author explains that a squeezed state is a slight relaxation; the relaxation is simply that one allows the width of the Gaussian to be different from that of the ground state. It, too, can be displaced and the wave packet will follow the classical motion in time. The mathematical properties of squeezed states are also reviewed in this paper.

21818 **Manifold and supermanifold: global aspects of supermanifold theory.** Rabin, J.M. (Enrico Fermi Institute, Univ. of Chicago, Chicago, IL). pp 169-176 of Topological properties and global structure of space-time. Bergmann, P.G.; De Sabbata, V. New York, NY; Plenum Press (1986). (CONF-8505317—).

From NATO advanced study institute on topological properties and global structure of space-time; Erice, Italy (12 May 1985).

The author reviews the basic definitions of the manifold and supermanifold and describes the foliated structure of a general supermanifold which replaces the vector bundle structure of the DeWitt case. Some examples are given of supermanifolds with nontrivial topology in the Grassmann directions. It is shown how an integral can be defined on supermanifolds far more general than the conventional vector bundles. The author speculates on the new physics which may be contained in supergravity or superstring theories defined on topologically exotic supermanifolds.

21819 **Singular values and condition numbers of galerkin matrices arising from linear integral equations of the first kind.** Allen, R.C. Jr.; Boland, W.R.; Faber, V.; Wing, G.M. (Univ. of New Mexico, Albuquerque). *Journal of Mathematical Analysis and Applications;* **109**: No. 2, 564-590(1 Aug 1985).

In [1] the problem of the conditioning of matrices arising in the numerical solution of integral equations of the first kind by Galerkin and collocation schemes was investigated. A lower bound on the matrix condition number was found and its behavior as a function of the smoothness of the kernel of the original equation was studied. Some numerical results presented in [1] and much more extensive studies reported in [2] served to demonstrate the validity and usefulness of the theory. In these studies all basis functions were required to be orthonormal. Current computational methods frequently use non-orthonormal bases (for example, splines), and the question naturally arises as to whether such bases yield better conditions. Actually, in both [1] and [2] piecewise constant splines were examined as a special orthonormal set. They, of course, conformed to the general analytical theory. Computationally they usually proved more satisfactory than more classical orthonormal bases, providing both better conditioning and more satisfactory numerical results. In this paper the authors shall examine much more general bases including some that are spline-like. They show that in general little change is made in the analytical results found in [1]. They also provide several corroborating numerical examples.

21820 **Fractional statistics and fractional quantized Hall effect.** Tao, R.; Wu, Y.S. (Univ. of Washington, Seattle). *Physical Review [Section] B: Solid State;* **31**: No. 10, 6859-6860(15 May 1985). Contract AC06-81ER40048.

The authors suggest that the origin of the odd-denominator rule observed in the fractional quantized Hall effect (FQHE) may lie in fractional statistics which govern quasiparticles in FQHE. A theorem concerning statistics of clusters of quasiparticles implies that fractional statistics do not allow coexistence of a large number of quasiparticles at fillings with an even denominator. Thus, no Hall plateau can be formed at these fillings, regardless of the presence of an energy gap. 15 references.

21821 **Comment on effects of relative energy contributions in a two-interaction transition.** Cahn, R.N.; Jackson, J.D. (Lawrence Berkeley Lab., CA). *Physical Review Letters;* **54**: No. 12, 1329-1330(25 Mar 1985).

In a comment on a paper by Reiss, the authors review quantum mechanical results on dipole transitions. They conclude that the transitions do not depend on the form of the potential energy used in the calculations. A reply by Reiss follows which invokes leptonic currents to explain his original position.

21822 **Probability densities and the radon variable transformation theorem.** Ramshaw, J.D. (Los Alamos National Lab., NM). *American Journal of Physics;* **53**: No. 2, 178-179(Feb 1985).

D. T. Gillespie recently derived a random variable transformation theorem relating to the joint probability densities of functionally dependent sets of random variables. The present author points out that the theorem can be derived as an immediate corollary of a simpler and more fundamental relation. In this relation the probability density is represented as a delta function averaged over an unspecified distribution of unspecified internal random variables. The random variable transformation is derived from this relation.

21823 (JINR—D-17-84-850-Vol.2, pp 138-151) **Ising models and soliton equations.** Perk, J.H.H.; Au-Yang, H. (State Univ. of New York, Stony Brook, USA). 1985. NTIS (US Sales Only), PC A16/MF A01. File Number DE87780102. (CONF-8408213—Vol.2).

From 3. international symposium on selected topics in statistical mechanics; Dubna, USSR (22 Aug 1984).

Several new results for the critical point of correlation functions of the Hirota equation are derived within the two-dimensional Ising model. The recent success of the conformal-invariance approach in the determination of a critical two-spin correration function is analyzed. The two-spin correlation function is predicted to be rotationally invariant and to decay with a power law in this approach. In the approach suggested here systematic corrections due to the underlying lattice breaking the rotational invariance are obtained.

21824 (JINR—D-17-84-850-Vol.2, pp 211-223) **Quantization of vortices in /sup 4/He and lambda-transition.** Rasetti, M. (Politecnico di Torino, Italy; Istituto Nazionale di Fisica Nucleare, Turin, Italy). 1985. NTIS (US Sales Only), PC A16/MF A01. File Number DE87780102. (CONF-8408213—Vol.2).

From 3. international symposium on selected topics in statistical mechanics; Dubna, USSR (22 Aug 1984).

An attempt to give a theoretical explanation of the Λ -transition in liquid /sup 4/He is made in terms of quantum statistical mechanics. A canonical quantization scheme is developed for vortices in superfluid He 2, taking as a starting point the classical Thompson theory of vortices. The next step is made for realizing that the structure of a current algebra A and of the corresponding group generate a space of configurations which is more similar to a set of planar Jordan curves, than to a set of three-dimensional loops. Such unexpected feature stems out of the explicit construction of a complete set of commuting observables from the generators of the algebra A. The final step of the theory is computing the grand-canonical partition function.

21825 (JINR—D-17-84-850-Vol.2, pp 239-250) **Canonical transformations in problems of quantum statistical mechanics.** Sankovich, D.P. (AN SSSR, Leningrad. Matematicheskij Inst.). 1985. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE87780102. (CONF-8408213—Vol.2).

From 3. international symposium on selected topics in statistical mechanics; Dubna, USSR (22 Aug 1984).

The problem of general canonical transformations in quantum systems possessing a classical analog is considered. The main role plays the Weyl representation of dynamic variables of the quantum system considered. One managed to build a general diagram of canonical transformations in a quantum case and to develop a method for reducing one or another operator to the simplest canonical form. In this case the procedure, being analogous to the Poincare-Birkhof normalization based on the Lie series theory, occurs.

21826 (JINR—D-17-84-850-Vol.2, pp 269-275) **On some exact results for model systems, interacting with boson field.** Turaev, M.T. (AN Uzbekskoj SSR, Tashkent. Inst. Yadernoj Fiziki). 1985. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE87780102. (CONF-8408213—Vol.2).

From 3. international symposium on selected topics in statistical mechanics; Dubna, USSR (22 Aug 1984).

A new approach to the solution of problems on quantum statistical mechanics, in particular to the investigation of model dynamic problems by the exact mathematical methods, is suggested. Model systems interacting with a boson field are solved by the method of approximating hamiltonians. A series of asymptotically exact relations for correlation averages is built without using some relations for free energies. For some models correlation averages characterize a long-range order in the subsystem (polarization, magnetization, a slit in the spectrum of elementary excitations in the theory of superconductivity). Correlations for phase transformations, accompanying by compensating macroscopic occupation of boson modes, are presented. Estimations (upper and lower) for free energy are given).

21827 (JINR—D-17-84-850-Vol.2, pp 310-321) **Renormalization group and functional self-similarity in various fields of physics.** Shirkov, D.V. 1985. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE87780102. (CONF-8408213—Vol.2).

From 3. international symposium on selected topics in statistical mechanics; Dubna, USSR (22 Aug 1984).

Difference between physical principles of renormalization group transformations in the systems with the infinitely great number of degree of freedom and functional self-similarity of simple physical systems is discussed. Transformations of functional self-similarity in a general form are introduced. The relation between functional and usual self-similary is established. Coincidence between a complex construction of the Kadanoff-type, lying in the basis of a renormgroup of the critical phenomenon theory, and the more obvious property of symmetry leading to functional self-similarity of simple dynamical systems.

21828 (JINR—D-17-84-850-Vol.2, pp 7-35) **Relativistic gravitation theory.** Logunov, A.A.; Mestvirishvili, M.A. (Moskovskij Gosudarstvennyj Univ., USSR). 1985. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE87780102. (CONF-8408213—Vol.2).

From 3. international symposium on selected topics in statistical mechanics; Dubna, USSR (22 Aug 1984).

The relativistic gravitation theory within the framework of a special principle of relativity is built. Conservation laws for energy-momentum and angular momentum are stricktly fulfilled and have a covariant character. The authors built effective field Riemann space, not escaping the Minkowski space by means of a tensor gravitational field and a geometrization principle. Construction has a field nature, as the effective strength space is created by the gravitational field of the Faraday-Maxwell type. It is possible to conserve the Hilbert-Einshtein equation complementing their by four field equations, according to which the gravitational field possesses only spin 2 and 0 in the general case.

21829 (JINR—D-17-84-850-Vol.2, pp 236-238) **Two-dimensional nonlinear equations of supersymmetric gauge theories.** Savel'ev, M.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1985. NTIS (US Sales Only), PC A16/MF A01. File Number DE87780102. (CONF-8408213—Vol.2).

From 3. international symposium on selected topics in statistical mechanics; Dubna, USSR (22 Aug 1984).

Supersymmetric generalization of two-dimensional nonlinear dynamical equations of gauge theories is presented. The nontrivial dynamics of a physical system in the supersymmetry and supergravity theories for (2+2)-dimensions is described by the integrable embeddings of Vsub(2/2) superspace into the flat enveloping superspace Rsub(N/M), supplied with the structure of a Lie superalgebra. An equation is derived which describes a supersymmetric generalization of the two-dimensional Toda lattice. It contains both super-Liouville and Sinh-Gordon equations.

21830 **Integrating some infinite oscillating tails.** Lyness, J.N. (Argonne National Lab., IL). *Journal of Computational and Applied Mathematics;* **12-13**: 109-117(1985). Contract W-31-109-ENG-38.

The numerical evaluation of integrals of f(x) where f(x) is slowly decaying and oscillating in sign is considered. A method, proposed originally by Longman has been modified, and can be used effectively when certain analytic information about the tail of f(x) is available. Specifically one requires that the distance between successive zeros tends to a finite limit whose numerical value is available. Examples include $f(x) = g(x)\, j(x)$ where j(x) is a circular function or a Bessel function and g(x) is ultimately positive. A series acceleration technique, which is very closely related to the Euler transformation is introduced, and shown by example to be useful in summing an oscillating series. Longman's method, which applies this transformation to a sequence, each member of which is obtained by numerical integration over an arch of the integrand function is described. A simple modification of Longman's method which seems to make it easier to use without compromising its effectiveness is given. The modified method is discussed from the point of view of increasing the reliability when results of specified accuracy are required.

Separate abstracts were prepared for 10 papers in these proceedings. (DWL)

**21832 Extended moment series and the parameters of the negative binomial distribution.** Bowman, K.O. (Union Carbide Corp., Oak Ridge, TN). *Biometrics;* **40**: 289-252(Mar 1984). Contract W-7405-ENG-26.

Recent studies indicate that, for finite sample sizes, moment estimators may be superior to maximum likelihood estimators in some regions of parameter space. In this paper a statistic based on the central moment of the sample is expanded in a Taylor series using 24 derivatives and many more terms than previous expansions. A summary algorithm is required to find meaningful approximants using the higher-order coefficients. A example is presented and a comparison between theoretical assessment and simulation results is made.

**21833 Accidental degeneracies, hidden supersymmetries, and spectrum-generating superalgebras.** Balantekin, A.B. (Physics Div., Oak Ridge National Lab., Oak Ridge, TN 37831). pp 616-620 of International symposium on nuclear shell models. Vallieres, M.; Wildenthal, B.H. Philadelphia, PA; World Scientific Pub. Co. (1984). (CONF-8410144—). Contract AC05-84OR21400.

From International symposium on nuclear shell model; Philadelphia, PA, USA (31 Oct 1984).

Recently, several Hamiltonians appeared in the literature which exhibit degeneracies that do not seem to be explainable in terms of hidden symmetry groups. Such Hamiltonians are shown to constitute supersymmetric quantum-mechanical systems. The concept of spectrum-generating superalgebras is introduced and coordinate space representations of the relevant non-compact superalgebras Osp(1/2) and SU(1,1/1) are exhibited.

**21834 Limiter of critical exponent university.** Baker, G.A. Jr. (Los Alamos National Lab., NM). *Journal of Physics A: Mathematical and General;* **17**: L621-L626(1984).

The authors show that in three dimensions the consideration of single-spin distributions containing a factor of $\exp(\lambda s^6)$ can lead to statistical mechanical models of dramatically different character from those defined by the usual field theory picture of the renormalization group theory of critical phenomena. These models plainly fall outside the usual, and previously expected, universality class. 21 references.

**21835 Parallel first-order method for parabolic.** Rodrigue, G. (Lawrence Livermore National Lab., CA). pp 329-342 of High-Speed Computation. Kowalik, J.S. (ed.). Berlin, West Germany; Springer-Verlag (1984). Contract W-7405-ENG-48.

In this paper, it is shown how computing architectures have affected the direction of research in deriving numerical time - differencing schemes for parabolic partial differential equations. In particular, the problem of solving the two-dimensional diffusion equation is considered.

**21836 Frame on frames: an annotated bibliography.** Wright, T.; Tsao, H.J. (Oak Ridge National Lab., TN). pp 25-72 of Statistical methods and the improvement of data quality. Orlando, FL; Academic Press, Inc. (1983).

The success or failure of any sample survey of a finite population is largely dependent upon the condition and adequacy of the list or frame from which the probability sample is selected. Much of the published survey sampling related work has focused on the measurement of sampling errors and, more recently, on nonsampling errors to a lesser extent. Recent studies on data quality for various types of data collection systems have revealed that the extent of the nonsampling errors far exceeds that of the sampling errors in many cases. While much of this nonsampling error, which is difficult to measure, can be attributed to poor frames, relatively little effort or theoretical work has focused on this contribution to total error. The objective of this paper is to present an annotated bibliography on frames with the hope that it will bring together, for experimenters, a number of suggestions for action when sampling from imperfect frames and that more attention will be given to this area of survey methods research.

**21837 (EUR-CEA-FC-RA—1985) 1985. Progress annual report.** (Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee). Jun 1986. 100p. (In French). NTIS (US Sales Only), PC A05/MF A01. File Number DE87751053.

Tore Supra construction has been vigorously continued. The whole cryogenic system has been entirely delivered. On TFR priority has been given to electron cyclotron resonance heating; but also neutral heating mechanisms, pellet injection, plasma-wall interaction in the presence of pumped limiter, impurity transport and plasma turbulence have been studied and progress on diagnostics have been made. On Petula, with lower hybrid wave, the numerous results on ion heating, current drive, plasma stability in the presence of non-inductive current and on Tore Supra technical problems are important. At last, theoretical and numerical results are concerned with plasma equilibrium macroscopic evolution of plasma, RF heating, plasma instabilities, magnetic islands, turbulence, transport coefficients and spectroscopy.

**21839 (DOE/ER/51030—T2) A program to develop advanced EBT [ELMO Bumpy Torus] concepts and international collaboration on the Bumpy Torus concept: Final report.** (Applied Microwave Plasma Concepts, Inc., Encinitas, CA (USA)). 14 Jan 1987. Contract AC03-82ER51030. 170p. (AMPC—14-023). NTIS, PC A08/MF A01; 1; GPO Dep. File Number DE87004602.

This project was undertaken to develop innovative concepts for improving the performance of ELMO Bumpy Torus devices in those aspects of plasma confinement that are particularly relevant to an eventual EBT reactor concept. These include effective magnetic utilization using Andreoletti coils, enhanced confinement using positive ambipolar potentials, and attractive divertor concepts that are compatible with formation and maintenance of ELMO rings. Each of the three major objectives was achieved and, except for the divertor studies, documented for publication and presentation at major scientific meetings. This report provides a brief recapitulation of the major results achieved in the form of a collection of those publications, together with this Introduction.

**21840 (DOE/ER/53122—3) Plasma diagnosis by dye laser intracavity absorption: Final report for period January 1, 1982-May 31, 1986.** Brink, G.O. (State Univ. of New York, Buffalo (USA)). May 1986. Contract AC02-81ER53122. 28p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87006407.

Dye laser intracavity absorption (ICA) has been studied as a potential diagnostic for plasma or neutral beam systems. For magnetic field measurements it is necessary to make Zeeman effect measurements on the resonance transition of atomic lithium on a millisecond time scale, or to make motional Stark Effect measurements on an injected fast atomic beam of hydrogen. To do this it may be necessary to sweep the dye laser in wavelength at a rapid rate so that the absorber can be sampled many times during the measurement. We have examined both of these possibilities during this contract. A rather detailed absorption spectrum of molecular hydrogen and deuterium arising in the 2c $^3$Piu and other electronic states has been obtained and analyzed. This has provided new information on the types of molecular species that may be detected in a plasma by ICA, and may provide a basis for the application of ICA for the diagnosis of the edge plasma in a tokamak or in the end regions of a mirror machine.

21841 **(DOE/ER/53201—T1) Unified theory of ripple transport in stellarators.** Beidler, C.D.; Hitchon, W.N.G.; van Rij, W.I.; Hirshman, S.P.; Shohet, J.L. (Wisconsin Univ., Madison (USA). Torsatron/Stellarator Lab.). Dec 1986. Contract FG02-85ER53201;AC05-84OR21400;FG02-86ER43216. 14p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87004900.

The distribution function for ripple trapped particles has been found in a series form valid for all low collision frequencies, for standard and transport-optimized stellarators. The diffusion coefficient obtained using this distribution function shows excellent agreement with the results of Monte Carlo and Fokker-Planck computer codes, in the cases studied.

21842 **(DOE/ER/53206—7) Theoretical studies of the heating of toroidal plasmas with radiofrequency electromagnetic radiation: Progress report, July 1, 1986-June 30, 1987.** Swanson, D.G.; Wersinger, J.M.; Hanson, J.D. (Auburn Univ., AL (USA). Dept. of Physics). Feb 1987. Contract FG05-85ER53206. 29p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87006335.

Progress is reported in several areas of interest to rf heating of plasmas. (1) The development of the complex ray-tracing code is largely implemented. The complex focussing terms are nearing completion. This allows the following of rays through regions where normal ray-tracing methods fail. (2) A major contribution is in the area of parametric instabilities, and a way to minimize their effect on the lower hybrid waves. By following a bundle of rays and evaluating the growth rate for the most rapidly growing waves at each point, the daughter waves have been followed to the point where pump depletion begins to be important. It is found that pump depletion is a serious problem for lower hybrid rays in typical plasmas, but its effect can be diminished in some cases by frequency modulation. (3) The continuing study of mode conversion problems has taken several directions. It has been shown that ion absorption of lower hybrid rays frequently involves cases where three types of waves are coupled through linear mode conversion in the same region of space, namely the cold lower hybrid wave, the warm lower hybrid wave, and an ion Bernstein mode. This three wave coupling problem is analyzed analytically in terms of a sixth order wave equation which describes coupling between all branches, and an analytical model may now adequately represent the physical problem. The formal solution of this equation verifies the major expectations of the analysis, and gives analytic coupling coefficients for the case with no damping. Finally, the exact order reduction method has been developed to the extent where numerical methods need to be introduced. The analytic evaluation of the form of the Green function is completed, and numerical implementation will begin before the end of the current contracting period and continue through the extended renewal period.

21843 **(DOE/ER/53219—1) Analysis of the effects of impurity buildup on the performance of a reversed field pinch: Final report.** Klevans, E.H. (Pennsylvania State Univ., University Park (USA)). 30 Oct 1986. Contract FG02-86ER53219. 42p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87005438.

A Zero-Dimensional code has been developed and used for parametric studies of ZT-40M behavior and the projected behavior of CPRF(ZT-H). The code includes equations for energy balance for electrons and ions. Particle density and current are specified quantities. Impurities are treated using a coronal equilibrium model. The energy confinement times for electrons and ions are permitted through the use of multiplicative coefficients. Ohmic heating includes an anomaly factor, and an experimentally observed ion heating is modeled by use of a multiplicative factor times Ohmic heating. The data from ZT-40M is used to obtain a "reasonable" set of coefficients, and the effect on T/sub e/ and T/sub i/ of varying these coefficients is examined. Various levels and kinds of impurities are introduced and their effects are examined. Both flat top and ramp current waveforms are studied. The results are then applied to study a ramp startup of CPRF for a current level of 1 MA.

21844 **(DOE/ET/53047—25) Confinement and heating of high beta plasmas with emphasis on compact toroids: Task 2, Stellarator and heliac research: Annual report, October 1, 1985-September 30, 1986.** Ribe, F.L. (Washington Univ., Seattle (USA). Dept. of Nuclear Engineering). 31 Dec 1986. Contract AT06-72ET53047. 63p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87005554.

Progress over the past year has enabled us to complete the comprehensive experimental investigation of the equilibrium and stability of the linear heliac and the linear l = 1 stellarator configration. In the case of the heliac work, we discoverd axisymmetric hot plasma near the axial conductor ("hardcore") in amounts which are comparable to the helically symmetric hot plasma centered on the magnetic axis. From this result came the motivation for an extended investigation which concentrates on the details of high-beta heliac formation. Important first results of the formation study have been obtained. In the case of the stellarator work, we have observed the flute-like m = 1 instability foe a specific set of experimental parameters and, for a different set, we have observed the mode stabilized by the combined effects of a finite ion Larmor radius and a nearby conducting wall. The single-discharge CV ion-temperature diagnostic system has been debugged and has yielded a heliac temperature measurement of (90 +- 10)eV. The plasma density diagnostic system based on cross-tube interferometry has been modified from its previous design for use with the somewhat wrinkly helical discharge tube.

21845 **(DOE/ET/53088—264) Kelvin-Helmholtz instability and vortices in magnetized plasma.** Horton, W.; Tajima, T.; Kamimura, T. (Texas Univ., Austin (USA). Inst. for Fusion Studies; Nagoya Univ. (Japan). Inst. of Plasma Physics). Dec 1986. Contract FG05-80ET53088. 36p. (IFSR—264). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87005522.

Analytic theory and implicit particle simulations are used to describe the evolution of the Kelvin-Helmholtz instability and the plasma vortices driven by a nonuniform E x B flow velocity. Formulas for plasma convection arising from the self-consistent plasma electric field give the rate of anomalous momentum transport across the magnetic field. The momentum transport is shown to be controlled by the tilting angle of the elliptical vortex with respect to the direction of the parallel flow. Three stages of evolution are investigated and formulas for the final vortex state are given.

21846 **(DOE/ET/53088—269) Dissipative trapped particle modes in tandem mirrors.** Berk, H.L.; Chen, C.Y. (Texas Univ., Austin (USA). Inst. for Fusion Studies). Jan 1987. Contract FG05-80ET53088. 41p. (IFSR—269). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87006344.

The theory for the dissipative trapped particle modes is developed for a tandem mirror taking into account equilibrium rotational effects, electron temperature gradients and an axial ambipolar potential, for a broad range of collisional parameters. The electrons are treated as a Maxwellian plasma that occupies the central cell and anchor cell regions. It is assumed that the eigenfunction is piecewise constant with abrupt transitions between the anchor and central cell regions. It is found that when $\omega/nu/sub\ p/ \geq 1$, with $\omega$ the mode frequency nu/sub p/ the Pastukhov loss rate, that the energy conservation structure of the collision operator produces important changes to previously developed theories. A solution to the problem is achieved by using the solution for the lifetime of an

electron in an ambipolar trap, taking into account the global energy conservation. The energy conservation structure also allows a self-consistent description of dissipative instabilities when thermal gradient and electric fields are present. At very high collision frequency, a new dispersion relation is obtained, which exhibits an axially rotational shear drive coupled to radial temperature gradients producing instability. Numerical studies are presented for some parameters, with the deviation from previous theory highlighted.

21847 **(EUR-CEA-FC—1286) Plasma current profile monitoring with hybrid wave.** Briffod, G. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee). Sep 1985. 14p. (In French). NTIS (US Sales Only), PC A02/MF A01. File Number DE87751044.

Recent experiments of plasma heating on Jet and TFTR have shown results which confirm that current and electronic temperature profiles are tightly correlated. To modify the energy contents at plasma current given, the current profile J(r) must then be modified and its value J(o) on the axis controlled. A control method of it with hybrid wave is proposed in this report.

21848 **(EUR-CEA-FC—1289) Analysis of soft X-ray spectra got with a lithium-silicon detector. Comparison with computed shapes of electron distribution function with and without electron cyclotron heating.** Jacquet, L.; Pain, M.; Dubois, M.A.; Pecquet, A.L. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee). May 1986. 12p. (In French). NTIS (US Sales Only), PC A02/MF A01. File Number DE87751045.

The study of the suprathermal part of the electron distribution function is very important for comprehension of current drive phenomenon and more generally of fast particle confinement. A numerical code has been developed allowing the electron distribution function calculation. It has been faced to experiment through soft X-ray spectra analysis. Measurements have been made on TFR Tokamak with and without electron cyclotron heating.

21849 **(EUR-CEA-FC—1291) Analysis of ion cyclotron minority heating regime in Tokamaks.** Cotsaftis, M.; Wang, P.K.C. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee). Feb 1986. 74p. NTIS (US Sales Only), PC A04/MF A01. File Number DE87751046.

Using an analytical representation of power fractions onto electrons and minority ions, a system reducing to lowest order to a O-D model has been established for ICRF heating of a Tokamak plasma in minority heating scheme. This system includes proper sources and sinks affecting in the KeV range the dynamics of temperatures and impurity production. It is mainly shown, due to the indirect nature of the heating and the variation of power fractions with temperatures, that the efficiency drops dramatically, almost independent of heat transport law, causing the majority ions temperature to decrease above an RF power input threshold. On the other hand, the system exhibits a branching structure above a critical density threshold, above which a disruptive behaviour sets in. Application to JET experiment gives good agreement with experimental observations, and typically a doubling of majority ions temperature from Joule heating at RF power threshold (2 keV average for 8-9 MW).

21850 **(EUR-CEA-FC—1292) Microfluctuations and energy diffusion in Tokamaks.** Gresillon, D.; Truc, A.; Olivain, J. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee). Feb 1986. 29p. (In French). NTIS (US Sales Only), PC A03/MF A01. File Number DE87751047.

It has been tried to show existence of structures (microfluctuations) at small scale in the plasma and an experimental relation between these fluctuations and the plasma confinement, measured elsewhere, has been researched. The plasma studied is the Fontenay-aux-Roses Tokamak plasma (TFR) and the observation mean of fluctuations is given by Thomson diffusion of an electromagnetic wave by plasma electrons. The plasma confinement is measured by energy balance method.

21851 **(EUR-CEA-FC—1294) Statistical analysis of Tokamak plasma turbulence.** Barkley, H.J.; Andreoletti, J.; Gervais, F.; Olivain, J.; Quemeneur, A.; Truc, A. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee). Apr 1986. 24p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87751048.

Coherent $CO_2$ laser signals scattered from TFR Tokamak plasmas have been analysed by determining their correlation integrals. The results of this study indicate that the plasma turbulence appears as a dynamic system which contains a strange attractor with a correlation exponent between 2.4 and 2.8, but which requires a sufficiently rapid data acquisition rate in order to reveal any internal structure.

21852 (EUR-CEA-FC—1295, pp 29-32) **Density profile from microwave reflectometry and confinement properties of a lower hybrid current drive sustained tokamak discharge.** Ichtchenko, G.; Bottollier-Curtet, H.; Goniche, M. (Association EURATOM-CEA CEN Grenoble, 38, France. Dept de Recherches sur la Fusion Controlee). May 1986. NTIS (US Sales Only), PC A04/MF A01. File Number DE87751062. (CONF-860412—Pt.1).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

Two millimeter wave reflectometers using the extraordinary mode of propagation, have been installed on Petula in order to investigate their potentialities for application to larger tokamaks. By sweeping the frequency range 75-110 GHz, it was possible to measure the central part of the density profile. The addition of a second reflectometer working in the range 60-90 GHz allowed the determination of the external part of the profile. The resulting profile is presented with and without L.H. current drive application. The effect of L.H. current drive application is particularly marked on the scrape-off layer plasma, whose density can be decreased by more than a factor of 2. It is generally observed that in these conditions of moderate RF level, the scrape-off density has the same temporal and parametric dependence than the loop voltage, but when the input RF power is further increased, this effects saturates while the loop voltage continue to decrease.

21853 (EUR-CEA-FC—1295, pp 33-36) **Attempt at MHD mode control by feedback modulation of L.H. driven current.** Parlange, F.; Vallet, J.C. (Association Euratom-CEA CEN Grenoble, 38, France. Dept de Recherches sur la Fusion Controlee). May 1986. NTIS (US Sales Only), PC A04/MF A01. File Number DE87751062. (CONF-860412—Pt.1).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

MHD activity in Tokamak discharges with lower hybrid current drive has distinct features which can be used to stabilize tearing modes. A way of reducing the m=2 tearing mode was recently proposed, consisting in driving more current at the 0 point of the islands than at the X point, by means of amplitude modulated lower hybrid waves. The way it was tested in Petula is presented here.

21854 (EUR-CEA-FC—1295, pp 41-44) **Power amplification factor on lower-hybrid waves driven tokamaks.** Tonon, G. (Association EURATOM-CEA CEN Grenoble, 38, France. Dept de Recherches sur la Fusion Controlee). May 1986. NTIS (US Sales Only), PC A04/MF A01. File Number DE87751062. (CONF-860412—Pt.1).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

As shown by many studies, a continuous operation is an attractive alternative for tokamaks. Up to now, only RF waves, for which frequency is close to the lower hybrid frequency have led to a significative efficiency up to electron densities around $10^{20}$ e.m$^{-3}$. For a continuous operation of a Tokamak, the circulating power must be not too large and consequently the plasma power amplifi-

cation factor Qsub(p) has to be high enough. According to a model which determines the current drive efficiency when we consider the injection of slow-waves on the torus, in good agreement with the results of recent current drive experiments, we have determined the Qsub(p) values achievable with this type of waves.

21855 (EUR-CEA-FC—1295, pp 45-48) **Lower hybrid current drive in the presence of a constant DC electric field on Petula-B.** Van Houtte, D.; Briffod, G.; Gormezano, C.; Panzarella, A.; Parlange, F. (Association EURATOM-CEA CEN Grenoble, 38, France). May 1986. NTIS (US Sales Only), PC A04/MF A01. File Number DE87751062. (CONF-860412—Pt.1).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

In present LHCD experiments, the research is directed towards a combined RF current drive and inductive current drive. This hybrid current drive appears to be the most promising method both to help the OH tranformer to save volt-second during higher plasma current ramp-up or longer plasma current flat top of the large tokamaks and to improve their plasma performances. For such hybrid discharges, an optimum operating mode is obtained on Petula-B at low RF power level in the presence of a DC electric field.

21856 **(EUR-CEA-FC—1295) Papers presented by the SIG at the 13. European conference on controlled fusion and plasma heating.** (Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee). May 1986. 54p. (CONF-860412—Pt.1). NTIS (US Sales Only), PC A04/MF A01. File Number DE87751062.

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

In this report, papers gathered essentially around lower hybrid wave heating and current drive. Efficiency, saturation, conduction are studied; design studies are made for multijunction grill. Optimization of wave launching and absorption is researched. Lower hybrid current drive which is non-inductive current drive together with ohmic current is studied. At last suppression of sawtooth instabilities by current drive is also presented.

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

Interaction of Lower Hybrid waves and plasmas is a very versatile method which has proven to be effective in a large range of applications: bulk ion heating, bulk electron heating, non inductive current drive. If the ratio between the mean velocity of HF induced fast particles and the thermal velocity of the bulk population is relatively small, effective bulk ion heating or bulk electron heating can occur via collisional transfer. If the above ratio is too large, fast ions, which have mainly a perpendicular energy, are poorly confined. Moreover they can be harmful for the discharge (impurities, etc...) since they are lost on the walls. In contrast, HF induced fast electrons gain essentially a parallel momentum from the wave. If unidirectional waves are launched, the dissymetry in electron distribution result in the obtention of an effective non inductive current.

21858 (EUR-CEA-FC—1295, pp 13-16) **Lower hybrid wave accessibility as a means for current profile control.** Briffod, G.; Gormezano, C.; Parlange, F.; Van Houtte, D. (Association EURATOM-CEA, 38 - Grenoble, France. Dept. de Recherches sur la Fusion Controlee). May 1986. NTIS (US Sales Only), PC A04/MF A01. File Number DE87751062. (CONF-860412—Pt.1).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

Powerful ICRH experiments on JET and Neutral Beam Injection of various species on TFTR have recently confirmed the insensitivity of the temperature and safety factor profile shapes to the heating profile and the important role played by the sawtooth activity on the overall performances. In order to overcome these limitations, we propose in this paper, in a Tokamak operating at constant plasma current: to control the resistive part of the current by driving an H.F. current by Lower Hybrid Wave. To act on the current profile, with the constraint that $q(o) > 1$ by controlling the wave penetration. Constant plasma current Tokamak discharges in which a part of the current is driven by L.H.W. have been extensively studied on PETULA and this mode of operation has proven to be very efficient in stabilizing the sawtooth and M.H.D. activity.

(Association EURATOM-CEA, CEN-Grenoble, 38, France. D.R.F.C/S.I.G.). May 1986. NTIS (US Sales Only), PC A04/MF A01. File Number DE87751062. (CONF-860412—Pt.1).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

Lower hybrid current drive experiments on the Petula B tokamak have already shown strong modifications of the plasma behaviour when a fast electron population is sustained by lower hybrid waves. The main response of the plasma to the absorbed power is the current but various other responses can be analyzed. This paper reports an experimental and theoretical study on the use of the Electron Cyclotron Emission as a diagnostic for the absorbed H.F. power. The current, the conduction and the saturation of the absorption are observed and interpreted.

21860 **(EUR-CEA-FC—1296) Annual report on theoretical work of the STGI (section de theorie des gaz ionises).** (Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee). 1985. 26p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87751049.

This report presents theoretical work on plasma equilibrium, macroscopic plasma evolution and transport codes, waves and RF heating, plasma instabilities magnetic islands and turbulence, transport coefficients and scattering of near-resonance radiation.

21861 **(EUR-CEA-FC—1299) Study, realization and operation of a fast amplitude selector for X-ray spectrometry in thermonuclear plasma.** Allard, P. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee). Jun 1986. 135p. (In French). NTIS (US Sales Only), PC A07/MF A01. File Number DE87751051.

A semiconductor diode detector is here used to measure soft X radiation emitted by a plasma. Energetic resolution, in this case, is enough for electron study to improve time resolution - for use on Petula - a fast amplitude selector has been used with a good channel number. The Si(Li) diode X spectrometry system is detailed. For amplitude coder, "video coders" have been chosen which are parallel coders in integrated circuits. The different modules (coder rock memory one, visualization, Camac interface) of the multichannel analyzer are presented. Amplitude, selector characteristics are detailed, they are measured with pulses directly applied to the coder stage. Measurements made with the complete spectrometry system are shown; they are made successively with radioactive sources ($^{55}$Fe and $^{93}$Nb), with a simulation generator and with the X radiation of Petula plasma.

21862 **(EUR-CEA-FC—1300) One-dimensional transport codes MAKOKOT. Presentation and directions for use.** Capes, H.; Mercier, C.; Morera, J.P.; Haquang, D.; Cissoko, G.; Chavazas, J.M. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee). Jun 1986. 59p. (In French). NTIS (US Sales Only), PC A04/MF A01. File Number DE87751052.

In this note are presented the different one-dimensional evolution codes available to date under the generic name MAKOKOT. They are six principal codes: - TRANS: for ion and electron transport; -NEUTRE: for neutrals; -IMPUR: for impurities; -ECRH: for

electron cyclotron resonance; -DENT: for sawtooth modelling and analysis; -BILAN: for global verification of conservation. One supplementary code is added which is an impurity evolution code; it takes in account, in 1-D geometry, the buffer zone generated by the limiter between the hot plasma and the wall. An abundant bibliography is given. A comprehensive manner of using is given which underlines the use versatility of these codes.

21863 **(GA-A—18596) Characteristics of reversed field pinch plasmas with a resistive shell.** Tamano, T.; Bard, W.D.; Chu, C.; Carlstrom, T.N.; Goforth, R.R.; Kondoh, Y.; La Haye, R.J.; Lee, P.S.; Nilles, E.J.; Saito, M.T.;. (GA Technologies, Inc., San Diego, CA (USA)). Jan 1987. Contract FG03-86ER53228. 12p. (CONF-861106—16). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87005383.

From IAEA international conference on plasma physics and controlled nuclear fusion research; Kyoto, Japan (12 Nov 1986).

Reversed field pinch plasmas in a resistive shell have been investigated in the OHTE device. Discharges were sustained over 10 ms, much longer than the resistive shell time of 1.5 ms. Global plasma characteristics such as plasma temperature, density, resistance and magnetic fluctuations were very similar to those obtained with the previous highly conducting shell. A new type of toroidally localized kink instability, which we named the "slinky" mode, was found. It initially grew with a growth time of approximately the resistive shell time as the linear MHD theories have predicted, but self-healing was usually observed within a few milliseconds. This indicates that a highly conducting shell may not be required for a reversed field pinch, and suggests that linear plasma stability is not always necessary in a confinement system.

Contract AC05-84OR21400;AC02-76CH03073. 9p. (CONF-861106—18). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87005717.

From IAEA international conference on plasma physics and controlled nuclear fusion research; Kyoto, Japan (12 Nov 1986).

In Ohmic discharges, pellet injection experiments on TFTR have increased density limits and energy confinement. Injecting multiple pellets sustains the improved confinement and increases the central density and peaked character of the profile, producing significant increases in n/sub e/(0)tau/sub E/(a). A value of (1.4 +- 0.3) x $10^{20} m^{-3}$ . s has been achieved at a central electron temperature of 1.4 keV. Decay of the central density for strongly peaked profiles in Ohmic discharges is consistent with central particle diffusion coefficients of 0.1 $m^2/s$ and flow velocities on the order of neoclassical velocities. Concentrations of scandium injected following pellet injection (n/sub Sc//n/sub e/) exhibit an extended rise time and then remain roughly constant during the subsequent slow decay of the electron density. In pellet-fueled discharges heated by tangential neutral beams at high density, heating profiles vary from a flat radial shape to a profile that is peaked near the q = 2 radius. Global confinement is comparable to that obtained in gas-fueled discharges with similar total input power but with heating profiles more strongly peaked on axis. Central confinement in pellet-fueled discharges exceeds values obtained in gas-fueled discharges.

21871 **(ILE—8509P) Integral representation of nonlinear heat transport.** (Osaka Univ., Suita (Japan). Inst. of Laser Engineering). Jul 1985. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700914.

The electron distribution function in a plasma with steep temperature gradient is obtained from a Fokker-Planck equation by Green's function method. The formula describes the nonlocal effects on thermal transport over the range, $\lambda/sub\ e//L < 0.1$. The formula includes the self-consistent electrostatic potential and exactly recovers the Spitzer-Haerm thermal conductivity in the long scale length limit, $\lambda/sub\ e//L \to 0$. As an example, the heat wave is analyzed numerically by the integral formula and it is found that the previous simulation results are well reproduced.

21872 **(INIS-mf—4754-No.34) International Bulletin on Atomic and Molecular Data for Fusion. No. 34.** Smith, J.J. (ed.). (International Atomic Energy Agency, Vienna (Austria). Atomic and Molecular Data Unit). Sep 1986. 103p. NTIS (US Sales Only), PC A06/MF A01. File Number DE87700925.

This bulletin deals with atomic and molecular data for fusion. A bibliography of the most recent relevant data is provided (499 literature pieces). An author index is included.

21873 (INIS-mf—10565, pp 3-6) **On electron acceleration with the potential waves excited in a plasma by the strong SHF field.** Karfidov, D.M.; Sergejchev, K.F. 1985. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780085.

Kratkie Soobshcheniya po Fizike. No. 3.
In Experimental and theoretical physics. Collection.

Possibility of electron capture into a high-frequency potential wave with a phase velocity exceeding the thermal electron velocity 3-4 times was considered under conditions of existence of kinetic parametric plasma instability. Acceleration estimates were compared with experimental data.

21874 (INIS-SU—380, pp 16-20) **Microchannel analyzer for diagnostics of corpuscular and X-ray emission of a laser plasma.** Barabash, L.Z.; Bragin, B.N.; Golubev, A.A. 1985. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780086.

Kratkie Soobshcheniya po Fizike. No. 5.

In Experimental and theoretical physics. Collection.

In investigations on laser heating and compression of spherical targets ensuring of uniformity of irradiation and symmetry of the produced plasma corona and compressed non evaporated part of the target are of a great importance. Due to this fact one of the main diagnostics problems is the development of special apparatus which permits the diagnostics of the high-temperature plasma image with spatial resolution of 10/sup -2/ mm and time resolution of 10/sup -10/ s. The microchannel analyzer for diagnostics of images in various spectral ranges of X-ray and corpuscular emission of a laser plasma is developed. The microchannel plate (MCP) of the analyzer transforms X-ray, ultraviolet radiation and ion fluxes into that of electron one. MCP external diameter is 40 mm, channels diameter (13 μm) determine the spatial resolution. The electron flow is amplified in MCP 10/sup 2/-10/sup 4/ times (depending on MCP voltage value) and then is transferred by 5 kV plane-parallel field onto aluminized luminescencent screen where it is transformed into visible radiaion. Image diagnostics is realized y a high-sensitive photofilm (Photo-250). Sensitivity calibration in the X-radiation range of 1-19 keV and ion energy of 1-10 keV is performed.

21875 (INPE—3977) **Influence of a strong laser field on the stopping power for charged test particles in fusion plasmas.** (Instituto de Pesquisas Espaciais, Sao Jose dos Campos (Brazil)). Aug 1986. 26p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87700930.

The influence of a high-intensity electromagentic wave on the classical energy loss rate of ion in nondegenerate plasmas is calculated. It is shown that the laser field decreases the plasma stopping power and makes it anisotropic with respect to the polarization of the wave electric field.

21876 (INPE—3978) **Reduction of the general Spitzer-Haerm problem in plasma physics.** (Instituto de Pesquisas Espaciais, Sao Jose dos Campos (Brazil)). Aug 1986. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700931.

The general Spitzer-Haerm problem is unfolded through a redefinition of the dependent variable into two separate simpler problems. The first takes the form of a second order differential equation, and the second, that of an integration over the solution of the first problem, which provides the distribution function or, directly, the current and the heat flow. It is shown that the current and the heat flow can in general be synthesized from the solutions of the differential equation for two specific forms of the driving term.

21877 (IPP—2/283) **Magnetic surfaces and localized perturbations in the Wendelstein VII-A stellarator.** Wobig, H. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Sep 1986. 21p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87751278.

The critical dependence of plasma confinement in low-shear stellarators, such as Wendelstein VII-A, on the external rotational transform can be explained on the basis of magnetic surface destruction. External symmetry-breaking perturbations generate islands on the low order rational magnetic surfaces. The islands are largest at t=1/2 and t=1/3. Confinement is optimum in close proximity to these values. In order to study the structure of surfaces under the influence of perturbations, a mapping procedure is used instead of field line integration. It is found that the neighbourhood of low- order rational surfaces is particularly robust against surface destruction. The reason is that in this vicinity only rational surfaces with large m and n exist (t=m/n). On these surfaces the external perturbation only generates small islands. In W VII-A the current leads to the helical windings are one symmetry- breaking perturbation, and there might also be others. It is possible to avoid field errors of this kind in future stellarators.

21878 (IPP—5/6) **Magnetohydrodynamic equilibrium calculations using multigrid.** Braams, B.J. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Sep 1985. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87751279.

The multigrid method has been applied to the solution of the two-dimensional elliptic equation that governs axisymmetric ideal magnetohydrodynamic equilibrium. The possibility of applying multigrid to the computation of axisymmetric equilibria in the 'inverse coordinates' formulation and to three-dimensional equilibrium and evolution calculations is investigated.

21879 (IPP—5/11) **Numerical simulation of reflectometry density measurements in a reversed field pinch.** Brambilla, M.; Moresco, M. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Sep 1986. 39p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87751277.

The reflection of an Ordinary Wave from its cut-off at the electron plasma frequency can be exploited to measure the density profile of laboratory plasmas. We present two codes for the numerical simulation of broad band reflectometry on a Reversed Field Pinch. The RAYRFP code evaluates the h.f. field distribution in the geometric optic approximation. It can rapidly simulate a frequency scan by evaluating the optical length of the 'central' ray. It can also be used for example to estimate the angular spread of the reflected wave due to refraction and reflection from a cylindrical convex surface. Because of the large shear characteristic of Reversed Field Pinches, coupling between the ordinary and the extraordinary modes in the plasma can be important. Mode mixing is investigated by solving the full wave equation for nearly equatorial waves with a finite element code FELRFP. The results show that indeed a non negligible amount of power can be transferred from the launched O-mode to the unwanted X-mode (or viceversa). Although stronger in small devices, this effect can also be substantial when the optical path is long, even in plasmas so large that the variation of B per wavelength is small. The mixing coefficient is found to be an oscillating function of frequency, indicating that the excitation of standing waves between the plasma edge and the cut-offs also plays a role. Nevertheless, the implementation of reflectometry should still be possible without difficulty in sufficiently large devices.

21880 (IPP—III/110, pp 53-56) **Local transport in tokamaks with ohmic and injection heating.** Becker, G. (Association Euratom-Max-Planck-Institut fuer Plasmaphysik, Garching, Germany, F.R.). May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

The anomalous electron heat diffusivity CHI/sub e/ is investigated by a power scan of the injection heating and by the time evolution of L (low confinement) discharges. It is shown that deviations from the ohmic scaling occur if the non-ohmic electron heating locally exceeds the ohmic power density. The change in scaling is attributed to the injection heating with its different dependence on the plasma parameters rather than to other instabilities or saturation effects. Constraints on CHI/sub e/ are derived from the electron and ion energy equations and the shape of the measured electron temperature profiles. For small injection power complex CHI/sub e/ scalings result which cannot be represented by superposing the ohmic and L scalings.

21881 (IPP—III/110, pp 62-65) **Dimensionality of fluctuations in ASDEX.** Battiston, L. (Association Euratom-Max-Planck-Institut fuer Plasmaphysik, Garching, Germany, F.R.). May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

Dimensionality analysis of experimental series of data has revealed a new powerful tool for a deeper understanding or turbulent physical systems. The analysis of the so-called strange attractors provides a tool to identify the fractal dimension $\nu$ of a time series. This fractal dimension is associated with the number of independent processes which characterize the system, and if it exists, it provides a distinction between deterministic chaos and noise.

21882 (IPP—III/110, pp 71-76) **Free-boundary flow equilibria for ASDEX-UG.** Zehrfeld, H.P. (Association Euratom-Max-Planck-Institut fuer Plasmaphysik, Garching, Germany, F.R.). May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

Neutral beam injection into magnetically confined plasmas is connected with plasma flow and a corresponding alteration of the equilibrium characteristics of the discharge. In particular density variations on magnetic surfaces were observed in neutral beam heated plasmas. This has led to attempts to explain them by toroidal rotation of the plasma. Due to the finite rotational transform of the flow field accelerating forces in toroidal direction appear. In an equilibrium state, they must be balanced by corresponding components of jxB. This requires plasma currents across magnetic surfaces which together with the toroidal magnetic field maintain pressure gradients in magnetic surfaces. In order to demonstrate this effect quantitatively corresponding MHD flow equilibria have been calculated for the separatrix-bounded plasma configurations.

21883 (IPP—III/110, pp 119-123) **Coupling of lower hybrid waves to the ASDEX plasma.** Zouhar, M.; Vien, T.; Leuterer, F.; Muenich, M.; Brambilla, M.; Derfler, H.; Eckhartt, D.; Woyna, F. v. (Association Euratom-Max-Planck-Institut fuer Plasmaphysik, Garching, Germany, F.R.). May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

The ASDEX-Lower-Hybrid experiment uses an eight waveguide grill antenna to launch the waves. A mean power reflection coefficient as low as $<R>=0.1$ is attainable in all modes of operation. However the reflection coefficients R/sub k/ in the individual waveguides may vary over a great range (up to 0.9). This paper aims at depicting the reflection patterns R/sub k/=f(k) and comparing measurement with theory. At high power levels (above 140 kW/waveguide) a breakdown occurs. The sequence of phenomena relating to this breakdown is documented and commented on.

21884 (IPP—III/110, pp 35-40) **Energy and particle transport in medium-density ASDEX pellet discharges.** Gruber, O.; Jilge, W.; Mertens, V.; Vlases, G.; Kaufmann, M.; Lang, R.; Sandmann, W.; Buechl, K.; Bosch, H.S.; Brocken, H. May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

In ASDEX a comparison of ohmically heated divertor discharges with gas fuelling (GF) and pellet fuelling (PF), without any gas puffing after a gas puff 'start-up' phase, has been done. This paper deals with a detailed comparison of the radial transport of the pellet-fuelled and the gas-fuelled discharges with the transport analysis code TRANSP using the measured radial profiles of n/sub e/, T/sub e/ and radiation losses.

21885 (IPP—III/110, pp 41-44) **Analysis of the invariance property of the electron temperature during auxiliary heating in ASDEX.** Murmann, H.; Wagner, F.; Becker, G.; Bosch, H.S.; Brocken, H.; Eberhagen, A.; Fussmann, G.; Gehre, O.; Gernhardt, J.; Gierke, G. v. May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

A crucial and still unsolved problem in tokamak physics is the understanding of anomalous heat transport across the magnetic field via heat conduction of the electrons. All efforts to establish a universal expression for the diffusivity CHI/sub e/ as a function of local plasma parameters which is valid also for auxiliary heating have failed so far. The problem has become even greater since it became evident that plasma confinement deteriorates during additional heating in a parameter range that is still very close to ohmic heating conditions.

21886 (IPP—III/110, pp 45-48) **Particle confinement in ohmically heated ASDEX plasmas.** Gehre, O.; Becker, G.; Eberhagen, A.; Bosch, H.S.; Brocken, H.; Fussmann, G.; Gernhardt, J.; Gierke, G. v.; Glock, E.; Gruber, O. May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

The anomalous particle transport in ohmic deuterium and hydrogen discharges is investigated by scans of the plasma current, density and toroidal magnetic field. At smaller current or larger ion mass more peaked density profiles are found. The flux-surface-averaged transport is analysed by computer simulations. It is shown that the inward drift velocity is independent of the poloidal and toroidal magnetic field and the ion mass number but inversely depends on the density and electron temperature. Empirical scaling relations for the electron heat diffusivity and the diffusion coefficient are also presented.

21887 (IPP—III/110, pp 49-52) **Neutral beam deposition experiments at elevated densities in ASDEX.** Speth, E.; Gruber, O.; Janeschitz, G.; Murmann, H.; Niedermeyer, H.; Wagner, F.; Vollmer, O.; Becker, E.; Bosch, H.S.; Brocken, H. May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

In the past the penetration requirements for neutral beams have been derived from the postulate that the beam power should be deposited near the plasma axis. It has been demonstrated theoretically that the shape of the deposition profile is governed by the parameter $a/\lambda$ (a=minor plasma radius, $\lambda$=mean free path of the injected neutrals at line-averaged density). In order to make an experimental assessment of the required beam penetration a series of experiments were started in 1984 in ASDEX, in which neutral beam deposition was varied systematically. This paper describes the continuation of the experiments at almost twice the density and three times higher power.

21888 (IPP—III/110, pp 57-61) **Transport in beam-heated ASDEX discharges below and in the vicinity of the beta limit.** Gruber, O.; Jilge, W.; Bosch, H.S.; Brocken, H.; Eberhagen, A.; Fussmann, G.; Gehre, O.; Gernhardt, J.; Gierke, G. v.; Glock, E. May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

Radial transport and confinement properties of ohmically and beam-heated ASDEX discharges are studied using the PPPL transport analysis code TRANSP and measured radial plasma profiles and global parameters. Results are that the anomalous electron thermal transport is dominating in low-density ohmic as well as 'L' beam-heated ASDEX plasmas. It leads, however, for these regimes to different scaling laws of the global energy confinement time. At high-density ohmic and 'H' mode beam-heated discharges the neoclassical ion heat conductivity and convective losses (H mode) are comparable to the electron losses and tend to dominate the energy balance.

21889 (IPP—III/110, pp 66-70) **Influence of the current distribution on the achievable $\beta$-values in ASDEX.** Gierke, G. v.; Becker, G.; Bosch, H.S.; Brocken, H.; Buechl, K.; Eberhagen, A.; Eckhartt, D.; Fussmann, G.; Gehre, O.; Gernhardt, J. May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

In a divertor tokamak the behaviour of surface kinks are unclear due to the unknown influence of the strong shear near the se-

paratrix. In ASDEX the influence of the separatrix is very concentrated and therefore the influence should be restricted to higher n-modes. As we observe no pronounced changes with varying q-values we assume tentatively that the ballooning mode is responsible mainly for the observed limit.

21890 (IPP—III/110, pp 77-80) **MHD characteristics of ASDEX H-type discharges approching the $\beta$ limit.** Klueber, O.; Gernhardt, J.; Grassie, K.; Hofmann, J.; Kornherr, M.; Zehrfeld, H.P.; Becker, G.; Bosch, H.S.; Brocken, H.; Eberhagen, A. May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

Due to the favourable confinement properties of the H regime, $\beta$ values close to the Troyon limit can be achieved in the ADSEX device at a neutral injection power level proportional to 3 MW. In many cases, the $\beta$ limit is a soft one, i.e. $\beta$ attains a maximum and then decays smoothly up to the end of the injection pulse. Disruptions, however, may occur both during the rise and fall of $\beta$.

21891 (IPP—III/110, pp 81-84) **MHD-effects with NI and ICRF heating on ASDEX.** Kornherr, M.; Eberhagen, A.; Gernhardt, J.; Klueber, O.; Wagner, F.; Becker, G.; Bosch, H.S.; Brocken, H.; Fussmann, G.; Gehre, O. May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

With high power auxiliary heating at increased plasma pressure many new MHD phenomena occur which can be studied most suitable by observation of the soft X-ray ('SX') radiation. In the plasma centre NI excites large m=1, n=1 oscillations, the detailed behaviour of which depends on external parameters. In divertor discharges with NI power < or approx. 2 MW their occurrence is repetitive and terminated hy sawteeth. When NI is combined with ICRH the m=1 mode often disappears after a first strong sawtooth which is followed by 'precursor-free' large sawteeth.

21892 (IPP—III/110, pp 85-88) **ICRF H-mode and 2Ω/sub CH//D(H)-minority heating on ASDEX.** Steinmetz, K.; Wagner, F.; Wesner, F.; Noterdaeme, J.M.; Baeumler, J.; Becker, G.; Bosch, H.S.; Brambilla, M.; Braun, F.; Brocken, H. May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

ICRH experiments in the ASDEX divertor tokamak have now been operated in the 2Ω/sub CH/ regime and D(H)-minority mode. This paper presents the status of these investigations and compares some of the most interesting features of the RF scenarios with neutral beam heating (NI) in the same machine under optimized and reproducible plasma parameters. The achievement of the H-mode with ICRH alone is reported. Considerations on possible synergetic effects of the combination of ICRH with NI and impurity studies during ICRH are presented separately.

21893 (IPP—III/110, pp 89-92) **Role of the Faraday screen in ICRF antennae: Comparison of an optically open and optically closed screen in ASDEX.** Noterdaeme, J.M.; Soell, M.; Baeumler, J.; Becker, G.; Bosch, H.S.; Brambilla, M.; Braun, F.; Brocken, A.; Eberhagen, A.; Fritsch, R. May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

A Faraday screen has been used on RF antennae since the first days of heating experiments with ICRF waves. Its use on the C-stellarator brought major improvements in the heating efficiency of the plasma. In subsequent heating experiments on other machines the beneficial effect of a Faraday screen, after initial trials without it, was rediscovered on TFR, DIVA and ERASMUS. Consequently the Faraday screen has become a mandatory component of ICRF antennae, and it has been attributed different functions. To fulfill those functions the screen has become increasingly complicated, and in the next generation of experiments, where the screen has to be cooled, a new round of complexity is added. Can the screen be simplified, and are some of its attributed functions really needed. Those questions were the basis for an experiment on ASDEX.

21894 (IPP—III/110, pp 93-96) **Comparison of ICRH and LH accelerated hydrogen ions in NI heated ASDEX plasmas.** Ryter, F.; Brocken, H.; Leuterer, F.; Maassberg, H.; Mayer, H.M.; Soeldner, F.X.; Steinmetz, K.; Becker, G.; Bosch, H.S.; Eberhagen, A. (CEA Centre d'Etudes Nucleaires de Grenoble, 38, France). May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

In ASDEX, ICRH and LHH or LHCD have been applied separately to NI preheated plasmas in the L regime (H/sup 0/->D/sup +/, energy E/sub B/). The coupling of these waves to beam ions (H/sup +/) have been studied with charge exchange diagnostics. Shots were made with E/sub B/=29 keV and E/sub B/=42 keV and in the latter case P/sub NI/ or P/sub RF/ were scanned.

21895 (IPP—III/110, pp 97-100) **Stabilisation of sawteeth oscillations by lower hybrid waves in ASDEX.** Soeldner, F.X.; Eckhartt, D.; Leuterer, F.; McCormick, K.; Becker, G.; Bosch, H.S.; Derfler, H.; Eberhagen, A.; Fussmann, G.; Gehre, O. May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

Stabilisation of sawteeth has become a clue problem for high power additional heating in large tokamaks where the oscillations in the central electron temperature may be as high as 50%. In Lower Hybrid experiments the sawteeth of Ohmic discharges have been observed to disappear. In this paper we study the parameter range for stabilisation of sawteeth accessible with the LH-system on ASDEX. The role of the LH wave spectrum is discussed. For application to NBI heating the LH-power requirements and the benefits for the energy confinement in sawtooth-free discharges are investigated.

21896 (IPP—III/110, pp 101-104) **Influence of the N-spectrum on lower hybrid current drive in ASDEX.** Leuterer, F.; Brambilla, M.; Eckhartt, D.; McCormick, K.; Muenich, M.; Soeldner, F.X.; Zouhar, M.; Becker, G.; Bosch, H.S.; Brocken, H. May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

The lower hybrid current drive experiments in ASDEX so far have been performed mainly by operating successive waveguides of the grill at a relative phase of $\Delta phi = \pi/2$ and with equal amplitudes. The spectrum thus excited is considered in this paper as a reference spectrum. With such a spectrum it has been observed that the primary current rate of change, -dI/dt/sub OH/, necessary to maintain a constant plasma current I/sub p/, decreased with increasing RF-power, P/sub RF/. In this paper we describe experiments with 'tailored' spectra where phase and amplitude in each waveguide are specifically set to produce a N'-spectrum with a definite wing at the high N'-side.

21897 (IPP—III/110, pp 105-108) **Measurements of non-thermal electron population during lower-hybrid heating in ASDEX.** Bartiromo, R.A.; Giuliana, A.; Hesse, M.; Soeldner, F.X.; Fussmann, G.; Leuterer, F.; Murmann, H.; Eckhartt, D.; Eberhagen, A.; Becker, G. (ENEA, Frascati, Italy; CEA Centre d'Etudes Nucleaires de Grenoble, 38, France). May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

The aim of the present paper is to study the plasma-wave interaction by experimentally determining the fractional population of non-thermal electrons under different plasma conditions. The experiments were carried out on the ASDEX divertor tokamak, where current drive and plasma heating can be studied up to an in-

jected power of 1 MW at a frequency of 1.3 GHz. By changing the relative phase between successive elements in an eight-waveguide grill, the shape of the N' index spectrum as well as its directionality can be controlled.

21898 (IPP—III/110, pp 109-114) **Influence of the lower hybrid wave spectrum on the current distribution in ASDEX.** McCormick, K.; Soeldner, F.X.; Leuterer, F.; Murmann, H.; Eckhartt, D.; Becker, G.; Bosch, H.S.; Brocken, H.; Eberhagen, A.; Fussmann, G. May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

Measurements of the plasma current density distribution j(r) during injection of stationary or propagating lower hybrid wave spectra have been performed on ASDEX. Positive current drive leads to broader j(r) profiles - while T/sub e/(r) is peaking - coupled with an increase in q from q< or approx. 1 to q>1. The other spectra influence j(r) only to the extent predicted from classical conductivity based on changes in T/sub e/(r) under the condition q(0)proportional to 1.

21899 (IPP—III/110, pp 115-118) **Probe measurements of plasma inhomogeneities in the scrape-off layer of ASDEX during LH.** Lenoci, M.; Haas, G.; Becker, G.; Bosch, H.S.; Brocken, H.; Eberhagen, A.; Eckhartt, D.; Fussmann, G.; Gehre, O.; Gernhardt, J. May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

Electron temperature and density have been measured routinely at the edge of the ASDEX main plasma by means of a Langmuir triple probe which gives the saturation current and T/sub e/ on-line. Therefore one can get with a fast radially moved triple probe a complete n/sub e/(r) and T/sub e/(r) profile in one shot. The probe installed in ASDEX can be moved from a preset position 100 mm radially inward and backward within 200 msec. It is placed 22.50/sup 0/ toroidally away from the LH launching grill and 5/sup 0/ poloidally above the equatorial plane; the tips are arranged in the form of a triangle with distances of 7 mm. For a proper function of triple probes it is necessary that the deviations between the floating potentials of the 3 tips are small compared to T/sub e//e. In ohmic discharges this is fulfilled while during LH application we observed differences of the order of T/sub e//e. We have investigated this under different plasma and LH parameters.

21900 (IPP—III/110, pp 136-139) **Measurements of charged fusion products in ASDEX.** Bosch, H.S.; Schumacher, U.; Becker, G.; Brocken, H.; Eberhagen, A.; Eckhartt, D.; Fussmann, G.; Gehre, O.; Gernhardt, J.; Gierke, G. v. May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

For normal deuterium operation in ASDEX (A=4.1, I/sub p/=250-400 kA) the charged fusion products from the D-D reactions (3 MeV proton, 1 MeV triton and 0.8 MeV /sup 3/He) escape from the plasma on helical orbits to the upper part of the vessel. Since slowing-down can be neglected in ASDEX, the protons and tritons escape on identical orbits, because the trajectory depends only on the product mxv vector. The measurements of the charged fusion products give information on the ion temperature, fusion yield, and plasma behaviour. The charged fusion products were measured for ASDEX deuterium plasmas by using a surface barrier detector or nuclear emulsion foils, installed on a manipulator.

21901 (IPP—III/110, pp 140-143) **Periodic Thomson scattering diagnostic with 16 spatial channels on ASDEX.** Meisel, D.; Murmann, H.; Roehr, H.; Steuer, K.H.; Becker, G.; Bosch, H.S.; Brocken, H.; Eberhagen, A.; Fussmann, G.; Gehre, O. May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

The Nd-YAG Periodic Scattering System (PSS) was developped in teamwork with IPF of Stuttgart-University. At first a PSS with only one spatial channel was successfully tested in the ASDEX-Tokamak in 1982. Subsequently an upgraded system with 16 spatial channels was constructed. This new system is capable of measuring Te, Ne-profiles at 17 ms intervals during the entire ASDEX-Tokamak-discharge. The PSS has been working successfully for the last one and a half years as a standard diagnostic method in the ASDEX-Tokamak. This means, that the measurement is being automatically performed during all plasma-discharges. The Te- and Ne-values are stored in the ASDEX-computer and every user has the possibility to get the Te(r,t), Ne(r,t)-data for his own needs.

21902 (IPP—III/110, pp 144-147) **Measurement of plasma emission profiles in the range from 800-1000 nm for Z/sub EFF/-analysis in ASDEX.** Roehr, H.; Steuer, K.H.; Meisel, D.; Murmann, H.; Becker, G.; Bosch, H.S.; Brocken, H.; Eberhagen, A.; Fussmann, G.; Gehre, O. May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

We report the attempt to use the 16-point ND-YAG Thomson scattering device on ASDEX for measurements of plasma radiation profiles as well. The system offers the possibility to measure three spectral ranges simultaneously: 780-880 nm, 900-970 nm and 985-1020 nm.

21903 (IPPJ—743) **Magnetohydrodynamic stability of spheromak plasma in toroidal flux conserver with rectangular cross section. 2. Application of Mercier criterion.** (Nagoya Univ. (Japan). Inst. of Plasma Physics). Aug 1985. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700941.

The magnetohydrodynamic equilibrium states by Hill's vortex model and by the Coulomb-wave-function model are proved to be unstable. New MHD equilibrium configurations are determined by using another model for which dp/dpsi = 0 on the magnetic axis. Here p is the pressure and psi is the flux function. The values of the safety factor on the magnetic axis, q/sub axis/, are evaluated for these configurations. The MHD stability of these equilibrium states is investigated by the Mercier criterion. The values of the maximum beta ratio $\beta$/sub max/ are evaluated for this model. The optimized pressure distributions are determined by use of the Mercier criterion and the values of $\beta$/sub max/ are also evaluated for these pressure distributions. The values of $\beta$/sub max/ are shown to be at most 12 %, if the condition q/sub axis/ < 1 is required.

21904 (IPPJ—744) **Particle fluxes in the banana regime due to RF wave injection.** (Nagoya Univ. (Japan). Inst. of Plasma Physics). Sep 1985. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700942.

The radial particle fluxes for a two ion species plasma are investigated in an axisymmetric toroidal magnetic field. As a wave-absorption mechanism, the ion-cyclotron damping is considered. The inward and outward fluxes of plasma ions and impurity ions are induced by the RF wave injection when the condition u/sub 0/ B/sub $\theta$/ > 0 is satisfied. Here u/sub 0/ is the phase velocity along the magnetic field and B/sub $\theta$/ is the poloidal magnetic field.

21905 (IPPJ—745) **Is the drift instability related to H-mode.** (Nagoya Univ. (Japan). Inst. of Plasma Physics). Oct 1985. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700943.

The physical mechanism of the drift instability is reconsidered related to the "H-mode" in poloidal diverter tokamak plasma. We assume the collisionless drift wave is stabilized as a result of the quasilinear modification of the ion velocity distribution function which includes the particle drift terms along the magnetic field in the scrape-off plasma near the separatorix of the poloidal divertor tokamak. A freedom in the direction of magnetic field can stabilize the drift instability. The heat flux deposited to the divertor plate is expected to increase after H-mode transition.

21906 **(IPPJ—746) Current drive by fast magnetosonic waves near the lower hybrid frequency in the JIPP T-IIU tokamak.** Ohkubo, K.; Hamada, Y.; Ogawa, Y. (Nagoya Univ. (Japan). Inst. of Plasma Physics). Oct 1985. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700944.

Current drive by fast magnetosonic waves is successfully performed in the JIPP T-IIU tokamak by means of a four-element dipole antenna array with Faraday shield. The plasma current of about 40 kA is sustained by RF power of about 50 kW in the low density plasma of 2 - 4 x 10/sup 12/ cm/sup -3/ with an efficiency comparable to that of the slow wave current drive. A clear density limit for fast magnetosonic current drive exists contrary to theoretical expectations based on linear wave propagation.

21907 **(IPPJ—747) Magnetohydrodynamic stability of spheromak plasma in spheroidal flux conserver. Application of Mercier criterion.** (Nagoya Univ. (Japan). Inst. of Plasma Physics). Nov 1985. 25p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700945.

The MHD equilibrium configurations of spheromak plasmas in a spheroidal flux conserver are determined by use of a pressure distribution whose derivative dp/dpsi vanishes on the magnetic axis, and by use of an optimized distribution. Here p is the pressure and psi is the flux function. These equilibria are shown to be stable for symmetric modes. The stability for localized modes is investigated by the Mercier criterion. The values of the maximum beta ratio $\beta$/sub max/ are evaluated for both pressure distributions and are shown to become about two times larger by optimization. If the condition, q/sub axis/ $< 1$, is required, the values of $\beta$/sub max/ are found to be less than 30%. The oblate spheroidal flux conserver is shown to be better than the toroidal conserver with a rectangular cross section from the standpoint of stability.

21908 **(IPPJ—748) Helical fluctuation in reversed field pinch (RFP) plasma.** Arimoto, H.; Nagata, A.; Sato, K.I. (Nagoya Univ. (Japan). Inst. of Plasma Physics). Nov 1985. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700946.

The overall behaviours of helical fluctuations in RFP plasma are examined. Immediately after the RFP configuration is set up, ordered helical fluctuation begins to occur, and at the nearly same time toroidal flux enhancement propagates towards the direction of electron current flow. In this phase m = 1, n = 10 — 12 modes, where m and n are poloidal and toroidal mode numbers, are generated in positive flux region. In the current termination phase, m = 2 mode is dominant.

21909 **(IPPJ—749) Poloidal rotation of reversed field pinch plasma.** Arimoto, H.; Sato, K.I.; Nagata, A. (Nagoya Univ. (Japan). Inst. of Plasma Physics). Nov 1985. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700947.

The poloidal rotation of Reversed Field Pinch Plasma is clearly observed by the measurements of magnetic fluctuations and of Doppler shift of impurity lines. RFP plasma rotates in the direction of the electron diamagnetic drift to the toroidal field at the wall. Time behaviours of rotation frequency are examined. The rotation begins immediately after setting up RFP configuration and reaches maximum value before the peak current.

21910 **(IPPJ—750) Modern uses of Langmuir probes.** (Nagoya Univ. (Japan). Inst. of Plasma Physics). Nov 1985. 24p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700948.

The Langmuir probe is adaptable to measurements in strong rf and strong magnetic fields such as exist in many fusion related experiments. Some new techniques, mostly untested, are described which could be developed to overcome the difficulties of this diagnostic method.

21911 **(IPPJ—751) Theory for resonant ion acceleration by nonlinear magnetosonic fast and slow waves in finite $\beta$ plasmas.** (Nagoya Univ. (Japan). Inst. of Plasma Physics). Nov 1985. 39p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87700949.

A Korteweg de-Vries equation that is applicable to both the nonlinear magnetosonic fast and slow waves is derived from a two-fluid model with finite ion and electron pressures. As in the cold plasma theory, the fast wave has a critical angle $\theta$/sub c/. For propagation angles greater than $\theta$/sub c/ (quasi-perpendicular propagation), the fast wave has a positive soliton, whereas for angles smaller than $\theta$/sub c/, it has a negative soliton. Finite $\beta$ effects decrease the value of $\theta$/sub c/. The slow wave has a positive soliton for all angles of propagation. The magnitude of resonant ion acceleration (the $v$/sub p/ x B acceleration) by the nonlinear fast and slow waves is evaluated. In the fast wave, the electron pressure makes the acceleration stronger for all propagation angles. The decrease in $\theta$/sub c/ due to finite $\beta$ effects results in broadening of the region of extremely strong acceleration. It is also found that strong ion acceleration can occur in the nonlinear slow wave in high $\beta$ plasmas. Possibility of unlimited acceleration of ions by quasi-perpendicular magnetosonic fast waves is discussed.

21912 **(IPPJ—752) Plasma production with rotating ion cyclotron wave excited by Nagoya Type-III antennas in RFC-XX.** Okamura, S.; Adati, K.; Aoki, T. (Nagoya Univ. (Japan). Inst. of Plasma Physics). Nov 1985. 36p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87700950.

A method of plasma production with ion cyclotron wave heating was developed in RFC-XX. Nagoya Type-III antennas were used for the wave excitation and the gas supply was through a gas box. We investigated the effect of the rotating field excitation for the plasma production and heating. In m = -1 rotational mode (rotation in the direction of ion cyclotron motion), the plasma density profile is flat within the gas box bore with the line-integrated density nl = 3 x 10/sup 13/ cm/sup -2/ and the ion temperature T/sub i/ — 150 eV. For m = +1 mode, a high density plasma was obtained with a different profile which has a peak at the center. In this mode the line-integrated density is nl = 3 x 10/sup 14/ cm/sup -2/ with the peak density n(0) = 7 x 10/sup 13/ cm/sup -3/.

21913 **(IPPJ—753) Axial electric field driven by temperature anisotropy in a bumpy torus equilibrium.** (Nagoya Univ. (Japan). Inst. of Plasma Physics). Nov 1985. 24p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700951.

Cyclotron heating effect on the axial equilibrium is studied in a bumpy torus geometry. It is found that the temperature anisotropy of warm heated species can generate axial potential variation along the magnetic field lines. The temperature anisotropy is analyzed with a bimaxwellian fluid model.

21914 **(IPPJ—754) 'Crescent'-shaped tokamak for compact ignition.** (Nagoya Univ. (Japan). Inst. of Plasma Physics). Dec 1985. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700952.

A compact high-beta tokamak configuration with "crescent"-shaped (or "boomerang"-shaped) cross-section is proposed as a next-generation ignition machine. This configuration with a small indentation but a large triangularity is more compact than the normal dee-shaped design because of its high-beta characteristics in the first-second transition regime of stability. This may also be a more reliable next-generation compact device than the bean-shaped design with large indentation and small triangularity, because this design dose not rely on the second stability and is easily extendable from the present dee-shaped design.

21915 **(IPPJ—755) Influence of a hot particle component on plasma stability.** (Nagoya Univ. (Japan). Inst. of Plasma Physics). Dec 1985. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700953.

A hot particle component introduced into a background plasma can significantly alter the properties of both the equilibrium and perturbed states. In this work we will review various aspects of the problem together with the underlying physics.

**21916 (IPPJ—756) Tail anisotropy instability during plasma current rise by lower-hybrid waves in a tokamak.** (Nagoya Univ. (Japan). Inst. of Plasma Physics). Jan 1986. 40p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87700954.

Tail anisotropy instability during lower-hybrid current rise is investigated. Tail formation by lower-hybrid waves is studied by using a Fokker-Planck equation combined with the return field and the rf associated terms. Quasi-linear relaxation of the electron tail distribution under the influence of the plasma waves excited due to the instability is examined. It is found that the instability condition is related to the strength of the parallel diffusion by lower-hybrid waves and the ratio of the electron cyclotron frequency to the electron plasma frequency. The time scale between the instability spikes and the suppression of the instability by electron cyclotron heating are also discussed.

**21917 (IPPJ—758) Kink stability of long ion layers.** (Nagoya Univ. (Japan). Inst. of Plasma Physics). Jan 1986. 28p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87700955.

By means of the two-fluid model, the kink stability of a long thin field-reversed ion layer immersed in a dense low-temperature background plasma is studied theoretically. The two-fluid variational quadratic form with the assumption of rigid displacements in the radial direction yields a new kink stability condition that includes the effect of the non-zero real frequency of the modes, which is due to the inertia of the ion layer. This effect is essential to explain the numerical results of Harned. As the ratio of the density of the background plasma to that of the ion layer increases, this new kink stability condition reduces to the conventional condition. The physical mechanism for the kink instability is discussed by the analogy with the electrostatic two-stream instability.

**21918 (IPPJ—759) Advanced ICRF antenna design for R-TOKAMAK.** (Nagoya Univ. (Japan). Inst. of Plasma Physics). Jan 1986. 45p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87700956.

The advanced ICRF antennas designed for the R-TOKAMAK (a proposal in the Institute of Plasma Physics, Nagoya University) are described. They are a standard loop antenna and a panel heater antenna for fast wave heating, and a waveguide antenna for ion Bernstein wave heating. The standard loop antenna is made of Al-alloy and has a simple structure to install because of radioactivation by D-T neutrons. For a high power heating, a new type antenna called 'Panel heater antenna' is proposed, and it has a wide radiation area and is able to select a parallel wave number. The field pattern of the panel heater antenna is measured. The feasibility of the waveguide antenna is discussed for the ion Bernstein wave heating. The radiation from the aperture of the double ridge waveguide is experimentally estimated with a load simulating the plasma.

**21919 (IPPJ—760) Volume produced H/sup -/, D/sup -/ ion source for proton accelerator and thermo-nuclear fusion research by sheet plasma, 1.** (Nagoya Univ. (Japan). Inst. of Plasma Physics). Jan 1986. 30p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87700957.

In order to apply a sheet plasma type of volume produced H/sup -/, D/sup -/ ion source to injection of proton accelerators and neutral beam injection of thermo-nuclear fusion researches, a large sheet plasma of width 20 — 25 cm and length 30 cm is produced under a discharge current of 175 A, a H/sub 2/ or D/sub 2/ gas pressure of about 2.5 x 10/sup -3/ Torr and gas flow of (2.0 — 2.5) Torr l/sec in a magnetic field of (60 — 110) gauss. Thus, H/sup -/ or D/sup -/ ion current is extracted in a current density up to 19 mA/cm/sup 2/ or 16 mA/cm/sup 2/ which is uniform within 10% over a large area (above 250 cm/sup 2/) of the sheet plasma surface, and in an acceleration voltage up to 4.5 kV. Then, an electron current accelerated with H/sup -/ or D/sup -/ ions is reduced negligibly beyond a distance of 2 cm from final acceleration electrode.

**21920 (IPPJ-DT—118) Intelligent data recorder.** (Nagoya Univ. (Japan). Inst. of Plasma Physics). 1985. 27p. (In Japanese). NTIS (US Sales Only), PC A03/MF A01. File Number DE87700960.

The intelligent data recorder has been developed to data acquisition for a microwave interferometer. The 'RS-232C' which is the standard interface is used for data transmission to the host computer. Then, it's easy to connect with any computer which has general purpose serial port. In this report, the characteristics of the intelligent data recorder and the way of developing the software are described.

**21921 (JAERI-M—85-173) Spectral data for highly ionized molybdenum, Mo VI - Mo XLII.** (Japan Atomic Energy Research Inst., Tokyo). Oct 1985. 119p. NTIS (US Sales Only), PC A06/MF A01. File Number DE87701003.

Wavelengths and energy levels for the molybdenum ions Mo VI to Mo XLII are compiled for use in diagnostics of high temperature plasmas.

**21922 (JAERI-M—85-216) ICRF heating experiments in JFT-2 tokamak.** (Japan Atomic Energy Research Inst., Tokyo). Jan 1986. 94p. (In Japanese). NTIS (US Sales Only), PC A05/MF A01. File Number DE87701012.

This is an experimental study of ICRF heating on JFT-2 Tokamak in Japan Atomic Energy Research Institute. In this study, we first clarified physical and engineering problems of ICRF heating of tokamak plasma. Next, we optimized the design of the ICRF heating system, and the plasma parameters for the heating. Finally, we could demonstrate a high efficiency of this additional heating method by launching RF power which is two or three times as large as an ohmic input power to a plasma. And we achieved following things. (1) We optimized a design of an antenna, and we improved a durability of the system for high voltage. With the result that we achieved the maximum power density on an antenna. (2) We demonstrated that electron heating regime and ion heating regime can be easily accessed by controlling plasma parameters. Also we found the optimum heating conditions in each heating regime. (3) We experimentally clarified the production mechanism of impurities during ICRF heating. We could reduce the influx of metal impurity ions to a plasma by employing low z materials for limiters and antenna shields. Consequently, we improved a heating efficiency of electrons. Next, we studied a power balance of plasma during ICRF heating, and we could compare heating characteristics of ICRF with other additional heatings on JFT-2.

**21923 (LBL—22457) Charge transfer and excitation in high-energy ion-atom collisions.** Schlachter, A.S.; Berkner, K.H.; McDonald, R.J.; Stearns, J.W.; Bernstein, E.M.; Clark, M.W.; Tanis, J.A.; Graham, W.G.; McFarland, R.H.; Stockli, M.P. (Lawrence Berkeley Lab., CA (USA); Western Michigan Univ., Kalamazoo (USA). Dept. of Physics; Ulster Univ., Coleraine (UK). Dept. of Physics; Missouri Univ., Rolla (USA). Dept. of Physics; Kansas State Univ., Manhattan (USA). Dept. of Physics; North Carolina State Univ., Raleigh (USA). Dept. of Physics). Nov 1986. Contract AC03-76SF00098;AC02-83ER13116. 23p. (CONF-8611124—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003540.

From 3. international workshop on cross sections for fusion and other applications; College Station, TX, USA (6 Nov 1986).

Coincidence measurements of charge transfer and simultaneous projectile electron excitation provide insight into correlated two-electron processes in energetic ion-atom collisions. Projectile excitation and electron capture can occur simultaneously in a collision of a highly charged ion with a target atom; this process is called resonant transfer and excitation (RTE). The intermediate excited state which is thus formed can subsequently decay by photon emission or by Auger-electron emission. Results are shown for RTE in both the K shell of Ca ions and the L shell of Nb ions, for simultaneous projectile electron loss and excitation, and for the effect of RTE on electron capture.

21924 **(PPPL—2391) Loss of confinement following a sawtooth internal disruption in PBX tokamak.** Takahashi, H.; Morris, W.; Sesnic, S.; Bol, K.; Fonck, R.; Grek, B.; Gammel, G.; Heidbrink, W.; Kaita, R.; Kaye, S. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Oct 1986. Contract AC02-76CH03073. 13p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87005626.

Some bean-shaped plasmas heated by neutral beam injection lose a large amount of energy ($\delta\beta$/sub p perpendicular//$\beta$/sub p perpendicular/ $\leqq$ 20%) within a short period (0.3 to 6ms) following a sawtooth internal disruption, indicating a momentary worsening of the confinement. The most severe ($\delta\beta$/sub p perpendicular//$\beta$/sub p perpendicular/ $>$ 20%) events lead to discharge termination. The internal disruptions in the PBX plasmas often have an unusually large inversion radius, up to 75% of the plasma half-width.

21925 **(PPPL—2392) Positron deposition in plasmas by positronium beam ionization and transport of positrons in tokamak plasmas.** Murphy, T.J. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Nov 1986. Contract AC02-76CH03073. 35p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87005627.

In a recently proposed positron transport experiment, positrons would be deposited in a fusion plasma by forming a positronium (Ps) beam and passing it through the plasma. Positrons would be deposited as the beam is ionized by plasma ions and electrons. Radial transport of the positrons to the limiter could then be measured by detecting the gamma radiation produced by annihilation of positrons with electrons in the limiter. This would allow measurements of the transport of electron-mass particles and might shed some light on the mechanisms of electron transport in fusion plasmas. In this paper, the deposition and transport of positrons in a tokamak are simulated and the annihilation signal determined for several transport models. Calculations of the expected signals are necessary for the optimal design of a positron transport experiment. There are several mechanisms for the loss of positrons besides transport to the limiter. Annihilation with plasma electrons and reformation of positronium in positron-hydrogen collisions are two such processes. These processes can alter the signal and place restrictions ons on the plasma conditions in which positron transport experiments can be effectively performed.

21926 **(PPPL—2396) Geometrical effects in X-mode scattering.** Bretz, N. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Oct 1986. Contract AC02-76CH03073. 16p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87005612.

One technique to extend microwave scattering as a probe of long wavelength density fluctuations in magnetically confined plasmas is to consider the launching and scattering of extraordinary (X-mode) waves nearly perpendicular to the field. When the incident frequency is less than the electron cyclotron frequency, this mode can penetrate beyond the ordinary mode cutoff at the plasma frequency and avoid significant distortions from density gradients typical of tokamak plasmas. In the more familiar case, where the incident and scattered waves are ordinary, the scattering is isotropic perpendicular to the field. However, because the X-mode polarization depends on the frequency ratios and the ray angle to the magnetic field, the coupling between the incident and scattered waves is complicated. This geometrical form factor must be unfolded from the observed scattering in order to interpret the scattering due to density fluctuations alone. The geometrical factor is calculated here for the special case of scattering perpendicular to the magnetic field. For frequencies above the ordinary mode cutoff the scattering is relatively isotropic, while below cutoff there are minima in the forward and backward directions which go to zero at approximately half the ordinary mode cutoff density.

21927 **(PPPL—2407) HAIFA: A modular, fiber-optic coupled, spectroscopic diagnostic for plasmas.** Ramsey, A.T.; Turner, S.L. (Princeton Univ., NJ (USA). Plasma Physics Lab.; Science Applications International Corp., La Jolla, CA (USA)). Jan 1987. Contract AC02-76CH03073. 31p. NTIS, PC A03/MF A01; GPO Dep. File Number DE87005616.

HAIFA is a modular, multichannel, fiber optically coupled spectroscopy diagnostic for tokamak plasmas. It operates in the visible, measuring H/sub $\alpha$/ radiation, the visible continuum from thermal bremsstrahlung, and selected impurity lines. HAIFA is characterized by high modularity and flexibility, good radiation resistance, high noise immunity, and low cost. Details of design, construction, and calibration are given. The analysis of visible bremsstrahlung radiation measurements to deduce the effective ionic charge in a plasma is discussed.

21928 **(SAIC—86/1981) Rf stabilization of ballooning modes in tokamaks.** D'Ippolito, D.A.; Myra, J.R.; Francis, G.L. (Science Applications International Corp., Boulder, CO (USA). Plasma Research Inst.). Dec 1986. 14p. (PRI—108). NTIS, PC A02/MF A01. File Number DE87005284.

The use of radiofrequency (rf) waves in the ion cyclotron range of frequencies (ICRF) is shown to stabilize ballooning modes in tokamaks when the frequency and spatial wave structure are appropriately chosen. The physics of rf stabilization may provide access to high-beta tokamak operation in the second stability regime and may also be useful in suppressing edge localized modes in present experiments.

21929 **(SAIC—86/3081-Appat.77) TENSOR: A code for computation of the relativistic high frequency conductivity tensor for a magnetized plasma with arbitrary electron distribution function in the "temperature" range of 50-500 KeV: Final report.** Tamor, S. (Science Applications International Corp., La Jolla, CA (USA)). Sep 1986. Contract AC05-84ER53184. 69p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87005519.

A code has been developed for computation of the relativistic conductivity tensor for a plasma described by an arbitrary user-supplied electron distribution function. The calculation is based upon a generalization of the new representation of the conductivity tensor obtained by Weiss. This paper contains a development of the underlying theory and discussion of the computational method as well as representative results for the refractive index assuming various Maxwellian and non-Maxwellian distribution functions. Listings of the routine and a driver which include complete user instructions are appended.

21930 **(SAIC—87/1562) Ion transport in toroidally rotating tokamak plasmas.** Catto, P.J.; Bernstein, I.B.; Tessarotto, M. (Science Applications International Corp., Boulder, CO (USA). Plasma Research Inst.). Feb 1987. Contract AC03-76ET53057. 53p. (PRI—110). NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87006729.

An efficient and systematic treatment of classical and neoclassical transport in all regimes of collisionality is formulated which permits toroidal rotation speeds on the order of the ion thermal speed for arbitrary aspect ratio, cross section, and poloidal magnetic field strength. A more convenient but somewhat unconventional form of the reduced kinetic equation is derived that is shown to extend the previous form by properly retaining induced electric fields. The generalized kinetic and moment description is exploited to explicitly evaluate the radial fluxes of toroidal angular momentum and energy in a pure plasma via a variational formulation. The specific results obtained in the Pfirsch-Schlueter regime are substantially more general than previous evaluations and significant improvements are also made in the banana regime.

21931 **(UCRL—95992) Fusion research and plasma physics: A story of paradigms.** Post, R.F. (Lawrence Livermore National Lab., CA (USA)). 27 Jan 1987. Contract W-7405-ENG-48. 18p. (CONF-870247—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE87005057.

From International Rosenbluth symposium on dynamics of particles and plasmas; Austin, TX, USA (2 Feb 1987).

Marshall Rosenbluth's contributions to the magnetic mirror research program are briefly reviewed. (MOW)

21932 **Monte Carlo estimates of particle and energy confinement times in a bumpy torus and a bumpy square with poloidal electric fields.** Tolliver, J.S.; Hedrick, C.L. (Oak Ridge National Laboratory, P.O. Box Y, Oak Ridge, Tennessee 37831). *Physics of Fluids;* **30**: No. 3, 870-877(Mar 1987). Contract AC05-84OR21400.

Since significant poloidal structure in the electrostatic potential in Elmo Bumpy Torus (EBT) has been observed experimentally [Phys. Fluids 28, 2848 (1985)] and predicted theoretically (C. L. Hedrick, submitted to Phys. Fluids), a Monte Carlo calculation has been used to make estimates of the particle and energy confinement times in EBT with varying degrees of asymmetry in the electric field. The code is applicable to the bulk ion population and the "cool" electron population in EBT, but not to the intermediate-energy electrons believed to be responsible for the formation of the potential. A similar calculation is possible for an alternate magnetic field configuration known as a bumpy square, which is expected to have more symmetric potential profiles because of much better centering of the particle orbits. The calculations indicate that the confinement time in a bumpy square would be two to three orders of magnitude better than in EBT.

21933 **Collisional effects on kinetic electromagnetic modes and associated quasilinear transport.** Rewoldt, G.; Tang, W.M.; Hastie, R.J. (Plasma Physics Laboratory, Princeton University, P.O. Box 451, Princeton, New Jersey 08544). *Physics of Fluids;* **30**: No. 3, 807-817(Mar 1987).

The general procedure for the analysis of low-frequency electrostatic and electromagnetic modes in toroidal geometry is now well known. In the collisionless limit, the relevant dynamics (e.g., trapped particles, resonances, etc.) can be treated appropriately. However, with the introduction of collisional effects it is customary, for tractability, to employ model collision operators of varying degrees of complexity. Guided by results of earlier studies of alternative collision operators in unsheared slab geometry and in toroidal geometry, an improved model collision operator is introduced here for calculating toroidal eigenmodes. Analytic and numerical results are presented to support its relevance and to demonstrate its improvement over earlier models. The associated quasilinear particle and energy transport coefficients for each species are also calculated, and compared with the usual D/sub j/$\simeq\kappa$/sub j/ $\simeq\gamma/k^2$/sub perpendicular/ estimate.

21934 **Computer-simulation studies of electron-beam propagation through plasma into vacuum.** Chang, C.R.; Reiser, M. (Electrical Engineering Department and Laboratory for Plasma and Fusion Energy Studies, University of Maryland, College Park, Maryland 20742). *Journal of Applied Physics;* **61**: No. 3, 899-906(1 Feb 1987).

A disk model is developed to simulate the propagation of a cylindrical relativistic electron beam through plasma into vacuum via collective acceleration of positive ions from the plasma. Simulation results show dynamic details of electron and ion flow not noticed previously. The high-energy tail in the ion distribution is attributed to motion of the virtual cathode early in time when the ions enter the system. A comparison between the computer simulation and our analytical model published earlier shows good agreement for the time average behavior of the particles.

21935 **Neoclassical transport in stellarators.** Ho, D.D.; Kulsrud, R.M. (Lawrence Livermore National Laboratory, University of California, Livermore, California 94550). *Physics of Fluids;* **30**: No. 2, 442-461(Feb 1987). Contract W-7405-ENG-48.

The stellarator neoclassical transport caused by particles trapped in local helical wells is calculated in the low-collisionality regime using a systematic expansion. The behavior of electron transport is found to be the same over a wide range of energies but the behavior of ion transport for low-energy ions is found to be different than that for high-energy ions. Furthermore, the electron fluxes do not vary with the change in the radial ambipolar electric field nearly as much as do the ion fluxes. Thus the particle diffusion is controlled by the electrons. A nonradial ambipolar electric field is induced by ion drift. This electric field enhances the transport by about 15%—20%. A convenient graphical method that allows one to determine the magnitude of the radial ambipolar field for machines with different parameters is presented. Numerical examples show that electron energy confinement time is comparable to the ion energy confinement time for all the different size stellarators studied. Although the neoclassical losses are large, it is shown that ignition can be achieved in a reasonably sized stellarator reactor. Finally, fron the standpoint of reactor economics, the confinement scaling law shows that in order to increase ntau, it is better to increase the aspect ratio than the overall dimensions of the reactor.

21936 **Entropy production and plasma relaxation.** Hameiri, E.; Bhattacharjee, A. (Courant Institute of Mathematical Sciences, New York University, New York, New York 10012). *Physical Review [Section] A: General Physics;* **35**: No. 2, 768-777(15 Jan 1987).

Plasma relaxation, as well as the relaxation of more general diffusive systems, is discussed from a dynamical point of view. It is shown that a state which minimizes the rate of entropy production, as suitably defined, attracts neighboring states and thus causes relaxation. For plasmas, the entropy principle is compared with Taylor's hypothesis of energy minimization and is shown to explain observed experimental results. An iteration scheme based on the entropy principle is constructed, and enables numerical calculation of the relaxed state. The scheme arises more naturally than the "local potential" method of Glansdorff and Prigogine which is improved upon.

21937 **Observation of z-dependent impurity accumulation in the PBX tokamak.** Ida, K.; Fonck, R.J.; Sesnic, S.; Hulse, R.A.; LeBlanc, B. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Physical Review Letters;* **58**: No. 2, 116-119(12 Jan 1987).

Charge-dependent convective impurity transport is observed in the central core of PBX H-mode discharges by measurement of radial profiles for both low- and high-Z intrinsic impurities in the presence of strong sawtooth activity. The time-evolving Z/sub eff/ profile and central metallic densities are modeled to yield a diffuison coefficient and a Z-dependent inward convective pinch which are in general agreement with estimates of neoclassical transport in the central plasma region.

21938 **Three-dimensional particle simulation of drift-wave fluctuations in a sheared magnetic field.** Sydora, R.D.; Leboeuf, J.N.; Thayer, D.R.; Diamond, P.H.; Tajima, T. (Institute for Fusion Studies, The University of Texas at Austin, Austin, Texas 78712). *Physical Review Letters;* **57**: No. 26, 3269-3272(29 Dec 1986).

Three-dimensional particle simulations of collisionless drift waves in sheared magnetic fields were performed in order to determine the nonlinear behavior of inverse—electron-resonance dynamics in the presence of thermal fluctuations. It is found that stochastic electron diffuision in the electron-resonance overlap region can destabilize the drift-wave eigenmodes. Numerical evaluations based on a nonlinear electron-resonance broadening theory give predictions in accord with the frequency and growth rates found in the simulation of short-wavelength modes (k/sub y/rho/sub s/approx. $>1$).

21939 **Numerical simulation of Reversed-Field Pinch dynamics.** Schnack, D.D.; Barnes, D.C.; Mikic, Z.; Harned, D.S.; Caramana, E.J.; Nebel, R.A. (Science Applications International Corp., La Jolla, CA, USA; New York Univ., NY, USA. Courant Inst. of Mathematical Sciences; Los Alamos National Lab., NM, USA). *Computer Physics Communications;* **43**: No. 1, 17-28(Dec 1986). (CONF-860515—). Contract AC03-83ER53150.

From EPS conference on computational physics - computing in plasma physics; Partenkirchen, F.R. Germany (13 May 1986).

The Reversed-Field Pinch (RFP) is presented as a driven nonlinear dynamical system that evolves on time scales long compared with the fastest normal modes of the system. Numerical methods for the simulation of these processes, and examples of their application to experimentally observable phenomena, are presented.

21940 **Three-dimensional free boundary calculations using a spectral Green's function method.** Hirshman, S.P.; Van Rij, W.I.; Merkel, P. (Oak Ridge National Lab., TN, USA; Max-Planck-Institut fuer Plasmaphysik, Garching, Germany, F.R.). *Computer Physics Communications;* **43**: No. 1, 143-155(Dec 1986). (CONF-860515—). Contract AC05-84OR21400.

From EPS conference on computational physics - computing in plasma physics; Partenkirchen, F.R. Germany (13 May 1986).

Also published as report CONF-8605187--1.

The plasma energy W/sub p/ = ∫ sub(Ω/sub p/)(1/2B/sup 2/ + p)dV is minimized over a toroidal domain Ω/sub p/ using an inverse representation for the cylindrical coordinates R = ΣR/sub mn/(s) cos(mθ - nzeta) and ZETA = ΣZETA/sub mn/(s) sin(mθ - nzeta), where (s,θ,zeta) are radial, poloidal and toroidal flux coordinates, respectively. The radial resolution of the MHD equations is significantly improved by separating R and ZETA into contributions from even and odd poloidal harmonics which are individually analytic near the magnetic axis. A free boundary equilibrium results when Ω/sub p/ is varied to make the total pressure 1/2B/sup 2/ + p continuous at the plasma surface Σ/sub p/ and when the vacuum magnetic field B/sub v/ satisfies the Neumann condition B/sub v/ . dΣ/sub p/ = 0. The vacuum field is decomposed as B/sub v/ = B/sub 0/ + nablaPHI, where B/sub 0/ is the field arising from plasma currents and external coils and PHI is a single-valued potential necessary to satisfy B/sub v/ . dΣ/sub p/ = 0 when pnot = 0. A Green's function method is used to obtain an integral equation over Σ/sub p/ for the scalar magnetic potential PHI = ΣPHI/sub mn/ sin (mθ - nzeta). A linear matrix equation is solved for PHI/sub mn/ to determine 1/2B/sub v//sup 2/ on the boundary. Real experimental conditions are simulated by keeping the external and net plasma currents constant during the iteration. Applications to l=2 stellarator equilibria are presented.

21941 **Nonlinear ion heating in magnetized plasma by monochromatic low-frequency waves.** Roth, I.; Temerin, M. (Space Sciences Lab., Univ. of California, Berkeley, CA 94720). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Plasma Science;* **PS-14**: No. 6, 910-914(Dec 1986).

Heating of ions by monochromatic low-frequency waves, propagating perpendicularly to a dipole magnetic field, is analyzed theoretically and verified by simulations. The nonlinear acceleration mechanism involves a distortion of the ion trajectory by the external wave. An ion feels along its distorted trajectory field components at twice the wave frequency. When the wave frequency equals half of the local gyrofrequency, the resulting wave field at the gyrofrequency accelerates the ion. The perpendicular acceleration and the parallel motion determine the interaction time and the final ion energy.

21942 **Beam-generated waves in a large plasma chamber.** Kellogg, P.J.; Monson, S.J.; Holzworth, R.H.; Jost, R.J. (School of Physics and Astronomy, Univ. of Minnesota, Minneapolis, MN 55455). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Plasma Science;* **PS-14**: No. 6, 891-901(Dec 1986).

Plasma waves generated in a large vacuum chamber (20 x 30 m) by an electron beam of energy 0.5 to 2 keV, are measured. Both pre-beam plasma discharge (pre-BPD) and beam plasma discharge (BPD) states are investigated. The measured waves fall roughly into three categories: 1) a low-frequency spectrum with f << f/sub ce/, f/sub rho/; 2) a whistler mode spectrum; and 3) a high-frequency spectrum. The extremely low frequency waves are shown to be surface waves on a (nonneutral) plasma column but a higher frequency part of the low-frequency spectrum was not thoroughly investigated. It is speculated that it also represents surface waves on a nonneutral column. Its measured properties are consistent with the lower hybrid drift instability. The whistler mode spectrum seems to be a Cerenkov resonance with the lower Trivelpiece-Gould mode. It does not seem to play an important role in modifying the particle distributions. The high frequency spectrum is a Cerenkov resonance with the upper Trivelpiece-Gould mode. It is responsible for the major perturbation of the beam energy in BPD.

21943 **Diffusion in a quiet plasma and enhanced heating and diffusion in a turbulent plasma.** Okubo, M.K. Irvine, CA; Univ. of California (1986). 153p. University Microfilms Order No. 86-26,841.

Thesis (Ph. D.).

Cross-field ion transport was examined when ion-ion collisions played a significant role. Direct measurements of the test-particle diffusion of ions were made using a nonperturbing laser induced fluorescence diagnostic, and diffusion coefficients were compared with classical collisional diffusion predictions. Ion heating due to the parametric decay of lower hybrid waves (LHW) into electrostatic ion-cyclotron waves (EICW) was studied and the resulting effects on ion diffusion were examined. The experimental results were compared with predictions of ion-heating theory and with theories of enhanced diffusion due to turbulence in a plasma. The diffusion coefficient measured in a quiet plasma was found to agree, in magnitude and in scaling with B field and density, with that of diffusion driven by ion-ion collisions. It was found that, above a threshold wave power, diffusion driven by turbulent EICW could dominate the collisional contribution. The measured heating caused by turbulent EICW agreed with that derived from the kinetic theory of turbulent plasmas. Modulation of the pump LHW increased the ion heating over that with an equivalent CW pump. Peaks in heating at LHW modulation frequencies near the EICW frequencies showed resonant interactions between the resulting low-frequency beat waves and the original parametric-decay EICW. Modulation of the LHW increased ion heating by as much as a factor of two over that of the CW pump LHW.

21944 **Optical diagnostic study of the ion dynamics in a simple axisymmetric magnetic mirror stability, heating, and confinement.** Good, T.N. Irvine, CA; Univ. of California (1986). 279p. University Microfilms Order No. 86-26,832.

Thesis (Ph. D.).

This thesis describes a series of experimental investigations of ion dynamics in a simple axisymmetric magnetic mirror. Experiments were performed in a low $\beta$, quiescent plasma that was produced by contact ionization of an alkaline earth metal vapor on a thermionically emitting, rhenium hot plate. A barium plasma was chosen in order to facilitate the optical diagnosis of the ion velocity distribution function by laser-induced fluorescence. The plasma source was positioned at one magnetic field maximum. Adiabatic flow of plasma along flaring magnetic field lines was studied. Ion bulk parameters of temperature, drift velocity, and density were determined from the measurements of the velocity distribution function under conditions of variable mirror ratio. Methods of producing a mirror trapped ion distribution were explored. Ions were heated by plasma wave-particle resonant interactions. Two methods were employed: ion heating by broadband lower hybrid waves and ion cyclotron resonance heating. In order to destabilize the mirror confined plasma to the magnetic curvature induced interchange instability, an electrostatic gate was utilized to insulate the plasma from the stabilizing influence of the source.

21945 **Excitation and the propagation of ion acoustic solitons in nonideal plasmas.** Chang, H.Y. Iowa City, IA; Univ. of Iowa (1986). 98p. University Microfilms Order No. 86-28,086.

Thesis (Ph. D.).

Ion-acoustic soliton propagation in non-ideal plasmas is investigated experimentally and theoretically by modifying the KdV equation and/or using the Kadomstev-Petviashvili (KP) equation. The evolution of the frequency spectrum of a velocity modulated bursts of ions from a fine mesh grid in a plasma is measured and interpreted. Experiments on the propagation of an ion-acoustic soliton into a region of inhomogeneous plasma density are described. It is found that the local amplitude and velocity decrease and the width increases as the soliton propagates into a region of lower density. The propagation of an ion-acoustic soliton from a quiescent plasma region into a localized nonquiescent region is experimentally examined. The soliton properties are preserved although the soliton undergoes an enhanced damping as it propagates in the noisy plasma. The effects of small transverse perturbations are studied by launching solitons from the nonplanar geometries and interpreted using the KP equation.

**21946 Trapped electron transport via microinstabilities.** Hu, Y. Princeton, NJ; Princeton Univ. (1986). 87p. University Microfilms Order No. 86-26,169.

Thesis (Ph. D.).

Anomalous electron thermal conduction is generally recognized to be the principal heat loss channel in most modern tokamaks. Turbulent drift type microinstabilities have long been suspected to be the primary cause of this anomalous thermal conduction. In this work, a systematic formulation of trapped-electron transport is presented, based on a drift-wave turbulence model in the good confinement region (between the $q = 1$ and $q = 2$ surfaces). A pre-existing nonlinear gyrokinetic formalism was extended to include collisional effects by using the Fokker-Planck collision operator. Following the procedures of neoclassical theory, a formal transport theory including turbulence is developed. To further explore the properties of the low-$\beta$ gyrokinetic Fokker-Planck equation, the author considers the specific case of an axisymmetric, large aspect ratio tokamak with circular, concentric magnetic surfaces and employs the ballooning mode representation for the fluctuating quantities. The resulting equation is solved analytically for the perturbed electron distribution function. Corresponding expressions for the fluxes of particles and energy are evaluated numerically after prescribing the mode structure along the field line and the saturated mode amplitudes. Electrostatic transport coefficients thus obtained are presented and found to be in agreement with previous heuristic arguments.

**21947 Aspects of turbulent transport in a bounded plasma.** Smith, R.A. Princeton, NJ; Princeton Univ. (1986). 121p. University Microfilms Order No. 86-26,197.

Thesis (Ph. D.).

A new approach to the problem of turbulent transport in plasmas is formulated, based upon the constraints imposed by boundary conditions and conservation laws. This approach is consistent with several recent phenomenological studies of global confinement scalings in magnetically confined fusion plasmas. It implies that the edge regions of such configurations are particularly important in determining fluxes of particles and thermal energy. A general method for studying turbulent transport from this point of view is elaborated. The method is applied to a simple model, which shares some salient features with the fluctuations that account for transport in the edge regions of experimental plasmas; these features include wavelike behavior on large scales and a self consistent relation between mean quantities and the fluctuations in dynamic equilibrium. A mixing length analysis is presented, based upon these general properties and a small number of additional physical assumptions. The mixing length theory, which accounts for phase relations, transport, and the mean density gradient in the nonlinear state, emphasizes the balance between turbulent and classical transport mechanisms in the edge region. It requires input from a weakly nonlinear theory, which is developed in the form of a rigorous bifurcation analysis.

**21948 Radiation from nonlinear coupling of plasma waves.** Fung, S.F. College Park, MD; Univ. of Maryland (1986). 212p. University Microfilms Order No. 86-25,678.

Thesis (Ph. D.).

The author examines the generation of electromagnetic radiation by nonlinear resonant interactions of plasma waves in a cold, uniformly magnetized plasma. In particular, he considers the upconversion of two electrostatic wave packets colliding to produce high frequency electromagnetic radiation. Efficient conversion of electrostatic to electromagnetic wave energy occurs when the pump amplitudes approach and exceed the pump depletion threshold. Results from the inverse scattering transform analysis of the three-wave interaction equations are applied. When the wave packets are initially separated, the fully nonlinear set of coupling equations, which describe the evolution of the wave packets, can be reduced to three separate eigenvalue problems; each can be considered as a scattering problem, analogous to eh Schroedinger equation. In the scattering space, the wave packet profiles act as the scattering potentials. When the wavepacket areas approach (or exceed) $\pi/2$, the wave functions are localized (bound states) and the scattering potentials are said to contain solitons. Exchange of solitons occurs during the interaction. The transfer of solitons from the pump waves to the electromagnetic wave leads to pump depletion and the production of strong radiation. The emission of radio waves is considered by the coupling of two upper-hybrid branch wave packets, and an upper-hybrid and a lower hybrid branch wave packet.

**21949 Current drive by asymmetrical heating in a toroidal plasma.** Gahl, J.M. Lubbock, TX; Texas Tech Univ. (1986). 106p. University Microfilms Order No. 86-27,666.

Thesis (Ph. D.).

This report describes the first experimental observation of current generation by asymmetrical heating of ions. A unidirectional fast Alfven wave launched by a slow-wave antenna inside the Texas Tech Tokamak, asymmetrically heated the ions. Measurements of the asymmetry of the toroidal plasma current with probes at the top and bottom of the toroidal plasma column confirmed the current generation indirectly. Current generation, obtained in a one-species, hydrogen plasma, is a phenomenon which had not been predicted previously. Calculations of the dispersion relation for the fast Alfven wave near the fundamental cyclotron resonance in a one-species, hydrogen plasma, using warm plasma theory, support the experimental results.

**21950 Alfven wave heating in the ideal MHD and Guiding Center Plasma models.** Kalfaoglu-Divringi, L.R. New Haven, CT; Yale Univ. (1986). 194p. University Microfilms Order No. 86-28,046.

Thesis (Ph. D.).

Plasma heating through resonant absorption of Alfven waves is studied within the framework of the ideal MHD and Guiding Center Plasma models. The heating procedure is applied to a plasma in a steady state equilibrium in a one-dimensional slab surrounded by vacuum regions on both sides. First, the well-established ideal MHD model is reviewed. In the presence of an external excitation, the equation for the displacement of the plasma from its equilibrium position is presented along with the appropriate boundary conditions and corresponding energy absorption rate. Later, the similar calculations are done in the Guiding-Center Plasma model, where the controversial assumptions of adiabaticity and implicit large collisionality of ideal MHD are dropped and the stress tensor is allowed to be anisotropic. A one dimensional gyrokinetic equation is utilized to find the gyrokinetic distribution function. Moments of this distribution function are calculated to find the stress tensor which is then inserted into MHD equations to obtain an ordinary differential equation for the displacement of the plasma. It is found that the cusp resonance of ideal MHD has disappeared and that another resonance continuum depending on the plasma dispersion relation has appeared in this model. Finally, a numerical code is developed for both models and results are compared.

**21951 Fast wave propagation and minority ion heating current drive in a two ion species tokamak plasma.** Wong, K.L.,. Lubbock, TX; Texas Tech Univ. (1986). 82p. University Microfilms Order No. 86-27,663.

Thesis (Ph. D.).

Local cavity resonances of fast waves in a two ion species tokamak plasma and current generation due to the asymmetric cyclotron heating of minority ions by fast waves were investigated. Experimental results demonstrate the existence of a local cavity resonance for fast waves propagating in a deuterium tokamak plasma with a low concentration (5%) of hydrogen minority ions. The local resonance cavity for the fast waves is formed by the hybrid cutoff layer and the outer wall. Current generation by asymmetric minority heating with no net momentum injection into the plasma is studied numerically by solving the Fokker-Planck equation in which the quasi-linear diffusion term for cyclotron absorption is added to the Coulomb collision terms. Results show that the current drive efficiency is better in a hydrogen-deuterium plasma than a $He^3$-deuterium plasma. Applicability of the minority ion heating current drive scheme in a hydrogen tokamak plasma with unavoidable impurity ions as the minority ions is investigated. The practicality of this current drive process for fusion reactors is also discussed.

21952 **Summary abstract: laser-induced fluorescence of metal-atom impurities in a neutral beam.** Burrell, C.F.; Pyle, R.V.; Sabetimani, Z.; Schlachter, A.S. (Lawrence Berkeley Lab., CA). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* 3: No. 3, 1089-1090(May-Jun 1985). Contract AC03-76SF00098.

The need to limit impurities in fusion devices to low levels is well known. They have investigated, by the technique of laser-induced fluorescence, the concentration of heavy-metal atoms in a neutral beam caused by their evaporation from the hot filaments in a conventional high-current multifilament hydrogen-ion source.

21953 **Probes for plasma edge diagnostics in magnetic confinement fusion devices.** Manos, D.M.; McCracken, G.M. (Princeton Plasma Physics Lab., Princeton Univ NJ). pp 135-209 of Physics of plasma-wall interactions in controlled fusion. Post, D.R.; Behrisch R. New York, Ny; Plenum Press (1984). (CONF-8407172—).

From NATO advanced study institute on physics of plasma-wall interactions in controlled fusion; Val-Morin, Quebec, Canada (30 Jul 1984).

This paper examines probes used in fusion devices to measure edge plasma parameters. Electrical probes and surface collector probes lare described which can provide useful data and the two techniques are largely complementary. Energy analyser are included among the electrical probes and long term probes placed on the walls for extended periods are included in the surface probes. Methods of measuring erosion and redeposition are also outlined. Some of the problems inherent in probes such as disturbance of the plasma and practical problems of construction are discussed.

21954 **Plasma transport near material boundaries.** Singer, C.E. (Plasma Physics Lab., Princeton Univ., Princeton, NJ). pp 607-625 of Physics of plasma-wall interactions in controlled fusions. Post, D.E.; Behrisch, R. New York, NY; Plenum Press (1984). (CONF-8407172—).

From NATO advanced study institute on physics of plasma-wall interactions in controlled fusion; Val-Morin, Quebec, Canada (30 Jul 1984).

The fluid theory of two-dimensional (2-d) plasma transport in axisymmetric devices if reviewed. These models are beginning to play an important role in the design and interpretation of tokamak experiments. Emphasis is placed on understanding the conditions under which the known 2-d plasma fluid equations provide a valid description of these processes. Attempts to extend the fluid treatment to less collisional, turbulent plasmas are discussed. The complete 1-d fluid equations are given in the text, and 2-d fluid equations are given in the Appendix.

21955 **Plasma models for impurity control experiments.** Post, D.E.; Lackner, K. (Plasma Physics Lab., Princeton Univ., N.J.). pp 627-693 of Physics of plasma-wall interactions in controlled fusions. Post, D.E.; Behrisch, R. New York, NY; Plenum Press (1984). (CONF-8407172—).

From NATO advanced study institute on physics of plasma-wall interactions in controlled fusion; Val-Morin, Quebec, Canada (30 Jul 1984).

this paper outlines some of the various models used for calcualting plasma edge conditions, and discusses a few of the numerical techniques used for both hydrogen and impurity transport. The present state of scrape-off layer modeling is far less satisfactory for impurities than for the background plasma, an impression that is further enhanced when a comparison with experiments is attempted.

21956 **Neutral Particle transport.** Heifetz, D.B. (Princeton Plasma Physics Lab., Princeton, NJ). pp 695-771 of Physics of Plasma-wall interactions in controlled fusions. Post, D.E.; Behrisch, R. New York, NY; Plenum Press (1984). (CONF-8407172—).

From NATO advanced study institute on physics of plasma-wall interactions in controlled fusion; Val-Morin, Quebec, Canada (30 Jul 1984).

The effects of neutral transport, which is the transport of mass, momentum, and energy in a plasma by neutral atoms and molecules, are discussed. The physics of neutral transport and complete neutral trasport codes are examined. The Boltzmann equation and the one-dimensional Boltzmann equation as an analytic solution is described; Monte Carlo solutions are also given. Variance reduction techniquesa re discussed and samples applications are described.

21957 **Application of advanced millimeter/far-infrared sources to collective Thomson scattering plasma diagnostics.** Woskoboinikow, P.; Cohn, D.R.; Temkin, R.J. (Massachusetts Institute of Technology, Cambridge). *International Journal of Infrared and Millimeter Waves;* 4: No. 2, 205-229(1983).

The application of advanced millimeter/far infrared sources to substantially improve the effectiveness of collective Thomson scattering plasma diagnostics is discussed. Gyrotrons, $CO_2$ lasers and far infrared lasers which are optically pumped with $CO_2$ laser radiation can now provide important new capabilities in terms of combined high peak power and high average power, fine frequency tunability and a wide range of operating frequencies. Their capabilities can improve the signal to noise ratio and make possible time dependent scattering measurements. Both thermal level scattering used for determination of ion temperature and low level non-thermal measurements used for the investigation of plasma turbulence and wave phenomena are considered. Rapidly pulsed gyrotrons, $CO_2$, and optically pumped lasers can provide a range of combinations of high peak power and high energy during a given time interval. The use of this high peak power - high energy trade off capability to maximize signal to noise ratios is discussed. Dramatic reduction in stray light, using fine frequency source tunability and gas absorption cell technology, is also discussed.

21958 **(AD-A—175336/7/XAB) Variation in the amplitude of perturbations on the inner surface of an imploding shell during the coasting phase. Memorandum report, September 1985-June 1986.** Book, D.L.; Bodner, S.E. (Naval Research Lab., Washington, DC (USA)). 10 Nov 1986. 25p. (NRL-MR—5892). NTIS, PC A02/MF A01.

In some inertial-confinement fusion-target designs, a spherical shell collapses on a void or compresses a small amount of gaseous material. There can be a period during which both the outside (driver) pressure and the inside pressure have a negligible effect on the implosion dynamics, and the motion is essentially ballistic. The changes in the aspect ratio occur mainly because of geometrical convergence. For reasonable parameters, the inner surface does not begin to decelerate until shortly before convergence is complete. An approximate description of this casting phase is developed and to study the evolution of perturbations on the inner and outer surfaces of the shell in the limit where the fluid is incompressible. The two surfaces are strongly coupled as long as the shell remains thin. When the shell becomes thick compared to the inner radius, the inner and outer surface perturbations decouple. Under these conditions the surface wave action is a good adiabatic invariant, which can be used to estimate the change in the amplitude of a perturbation as a function of the shell inner radius R1. Detailed analysis confirms the adiabatic invariance argument and extends the results. We speculate that the adiabatic invariant may also be good in the case of compressible fluids.

21959 **(ANL/FPP/TM—208) Design analyses of self-cooled liquid metal blankets.** Gohar, Y. (Argonne National Lab., IL (USA)). Dec 1986. Contract W-31109-ENG-38. 50p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87005583.

A trade-off study of liquid metal self-cooled blankets was carried out to define the performance of these blankets and to determine the potential to operate at the maximum possible values of the performance parameters. The main parameters considered during the course of the study were the tritium breeding ratio (TBR), the blanket energy multiplication factor, the energy fraction

lost to the shield, the lithium-6 enrichment in the breeder material, the total blanket thickness, the reflector material selection, and the compositions of the different blanket zones. Also, a study was carried out to assess the impact of different reactor design choices on the reactor performance parameters. The design choices include the impurity control system (limiter or divertor), the material choice for the limiter, the elimination of tritium breeding from the inboard section of tokamak reactors, and the coolant choice for the non-breeding inboard blanket. In addition, tritium breeding benchmark calculations were performed using different transport codes and nuclear data libraries. The importance of the TBR in the blanket design motivated the benchmark calculations.

21960 **(CONF-860917—14) BEATRIX: The international breeder materials exchange.** Johnson, C.E.; Reuther, T.C.; Dupouy, J.M. (Argonne National Lab., IL (USA); Department of Energy, Washington, DC (USA). Office of Fusion Energy; Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.). NET Design Team). 1986. Contract W-31109-ENG-38. 8p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87004668.

From 14. SOFT - symposium on fusion technology; Avignon, France (8 Sep 1986).

The BEATRIX experiment is an IEA-sponsored effort that involves the exchange of solid breeder materials and shared irradiation testing among research groups in several countries. The materials will be tested in both closed capsules (to evaluate material lifetime) and opened capsules (to evaluate purge-flow tritium recovery). Pre- and post-irradiation measurement of thermophysical and mechanical properties will also be carried out.

21961 **(CONF-861175—1) Progress in stellarator/heliotron research, 1981-1986.** Lyon, J.F. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 45p. NTIS, PC A03. File Number DE87005505.

From IAEA workshop on the stellerator heliotron; Kyoto, Japan (25 Nov 1986).

Viewgraphs from this presentation are included. (MOW)

21962 **(CONF-861175—3-Vugraphs) Low-aspect-ratio torsatron reactors and ATF-II studies.** Lyon, J.F. (Oak Ridge National Lab., TN (USA)). Nov 1986. Contract AC05-84OR21400. 34p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87005506.

Viewgraphs presented at the meeting are included. (MOW)

21964 **(CONF-861254—1) The regional electromagnetics workshop in the USA.** Turner, L.R. (Argonne National Lab., IL (USA)). Nov 1986. Contract W-31109-ENG-38. 9p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87004709.

From International workshop for eddy current code comparison; Tokyo, Japan (20 Dec 1986).

At the Second Regional Workshop, held at Argonne National Laboratory 23 to 24 June 1986, fifteen participants from four countries heard ten presentations on Problems 1, 2, and 6. This note includes information about the workshop and summaries of the results for Problems 1 and 2.

21965 **(CONF-8609157—2) Thermal conductivity of fusion solid breeder materials.** Liu, Y.Y.; Tam, S.W. (Argonne National Lab., IL (USA)). Jun 1986. Contract W-31109-ENG-38. 22p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87004663.

From International workshop on the properties of ceramics and their measurements; Soverato, Italy (22 Sep 1986).

Several simple and useful formulae for estimating the thermal conductivity of lithium-containing ceramic tritium breeder materials for fusion reactor blankets are given. These formulae account for the effects of irradiation, as well as solid breeder configuration, i.e., monolith or a packed bed. In the latter case, a coated-sphere concept is found more attractive in incorporating beryllia (a neutron multiplier) into the blanket than a random mixture of solid breeder and beryllia spheres.

21966 **(CONF-8610115—22) Accelerated beam experiments with the ORNL SITEX [Surface Ionization with Transverse Extraction] and VITEX [Volume Ionization with Transverse Extraction] $H^-/D^-$ sources.** Dagenhart, W.K.; Tsai, C.C.; Stirling, W.L.; Ryan, P.M.; Schechter, D.E.; Whealton, J.H.; Donaghy, J.J. (Oak Ridge National Lab., TN (USA); Washington and Lee Univ., Lexington, VA (USA)). 1986. Contract AC05-84OR21400. 12p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87005683.

From 4. international symposium on the production and neutralization of negative ions and beams; Upton, NY, USA (27 Oct 1986).

Beam parameters have been measured for both the Surface Ionization with Transverse Extraction (SITEX) and Volume Ionization with Transverse Extraction (VITEX) $H^-/D^-$ ion sources. Both sources use a reflex discharge to generate the main plasma. Beam energies up to 18 keV were used for pulse lengths up to several seconds. For SITEX, Faraday cup magnetically analyzed $D^-$ beam currents of 110 mA at extraction densities of 48 $mA/cm^2$ and at a source ion temperature of 4 eV have been measured. For the VITEX results, Faraday cup magnetically analyzed beam currents of up to 80 mA at extraction densities of 27 $mA/cm^2$ and at a source ion temperature of 0.5 eV have been measured. Virtually all extracted electrons were recovered at an energy of 10 to 30% of the accel beam energy, and there were none in the analyzed beam.

21967 **(CONF-8610214—2) Oxidation of tritium atoms at a stainless steel surface.** Finn, P.A.; VanDeventer, E.H. (Argonne National Lab., IL (USA)). Oct 1986. Contract W-31109-ENG-38. 5p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87004936.

From International symposium on fusion reactor blanket and fuel cycle technology; Tokai-mura, Japan (27 Oct 1986).

The dynamic reaction of oxygen and tritium on a stainless steel surface was studied for low oxygen concentrations (less than 1 ppM oxygen in helium). The oxygen was swept over a stainless surface through which 20 to 90 $\mu Ci/d$ of tritium permeated. Dynamic conditions were maintained for three to five days with gas flow rates maintained at 40 to 100 mL/min. The ratio between the tritiated water collected and the tritium gas collected was less than one. At oxygen levels greater than 50 ppM, the ratio of tritiated water to tritium gas appears to be greater than 10.

21968 **(CONF-8610214—4) The LISA-1 and TRIO in-pile tests.** Clemmer, R.G.; Werle, H.; Briec, M. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.); CEA Centre d'Etudes Nucleaires de Grenoble, 38 (France)). 27 Oct 1986. Contract W-31109-ENG-38. 5p. NTIS, PC A02. File Number DE87004957.

From International symposium on fusion reactor blanket and fuel cycle technology; Tokai-mura, Japan (27 Oct 1986).

The in-pile tests TRIO and LISA-1 involve measurement of in-situ tritium release as a function of time, temperature and sweep gas conditions. These in-situ tritium recovery experiments are similar in concept to other in-pile tests such as the VOM series, Exotic, and the LILA series. TRIO used a single capsule with lithium aluminate. The results from TRIO have been compiled, evaluated and reported. The LISA-1 experiment had six test capsules: one lithium aluminate, one lithium orthosilicate ($Li_4SiO_4$), and four lithium metasilicate ($Li_2SiO_3$). A previous report gives a description of the experimental setup, experimental observations, and preliminary results. Presented herein is a more detailed evaluation of the LISA-1 experimental results for the three breeder materials. The results from LISA are then compared to those of TRIO.

21969 **(CONF-8610240—1) Experimental study of coupling between eddy currents and deflections in cantilevered beams as models of tokamak limiters.** Turner, L.R.; Hua, T.Q. (Argonne National Lab., IL (USA)). 1986. Contract W-31109-ENG-38. 6p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87004938.

From IUTAM conference: electromagnetomechanical interactions in deformable solids and structures; Tokyo, Japan (12 Oct 1986).

The coupling between eddy current and motion in a cantilevered beam is examined. The beam, which provides a simple model for the limiter blades of a tokamak fusion reactor, was subjected to simultaneous orthogonal time-varying and constant magnetic fields. The dynamic deformation of the beam includes two different modes: a bending mode and a torsional mode. Interaction of current with each mode and with the combined modes of vibration in described. Experimental verification of the case without torsional motion was performed with the FELIX facility at ANL. The peak deflection and stresses are much less than those predicted without consideration given to the coupling.

21970 **(DOE/DP/40200—24-Vol.26) LLE [Laboratory for Laser Energetics] review: Quarterly report, January-March 1986.** Schmid, A. (ed.). (Rochester Univ., NY (USA). Lab. for Laser Energetics). 1986. Contract FC08-85DP40200. 64p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87005865.

This volume of the LLE Review contains reports on OMEGA and GDL laser activities; characterization of laser-generated x-ray sources for nuclear level excitation; the physics of parametric instabilities driven by two pump beams in laser-produced plasmas; developments in advanced technology areas at LLE, specifically ultra-high-speed opto-electronic devices and methods and the modeling of thin-film features in physical vapor deposition; and the National Laser Users Facility activities from January to March 1986. The following are highlights of articles contained in this issue: (1) Parametric instabilities driven by more than one laser beam are analyzed for realistic laser-driven plasmas. (2) OMEGA laser-plasma x-ray yields are analyzed for their suitability in pumping novel γ-ray laser configurations. (3) A new streak spectrograph combines an x-ray streak camera with a conically curved crystal x-ray spectrograph for time-resolved spectral analysis of laser-plasma x rays. (4) The race for the fastest device switching times among high-speed electronic circuits is accelerated by the LLE opto-electronic sampling technique, which measured a 5-ps rise time in a permeable-base transistor. (5) Growth abnormalities in physically vapor-deposited optical thin films are a vexing problem for film environmental stability and high-power laser compatibility.

21971 **(DOE/DP/40200—30) Target fabrication for high density target experiments at the University of Rochester's Laboratory for Laser Energetics.** Kim, H.; Soures, J.M. (Rochester Univ., NY (USA). Lab. for Laser Energetics). 1986. Contract FC08-85DP40200. 8p. (CONF-860330—3). NTIS MF A01; 2; GPO Dep. File Number DE87005915.

From 5. annual target fabrication specialists meeting; Las Vegas, NV, USA (24 Mar 1986).

A theoretical and experimental program is in progress at the University of Rochester's Laboratory for Laser Energetics to demonstrate high density compression using the 351-nm, uniform illumination, OMEGA laser facility. The targets that have the best chance of meeting the objectives of this campaign are low-Z polymer shells with liquid or solid DT layers. This paper describes fabrication activities of such targets. These activities include polymer shell fabrication, development of a cryogenic fuel facility, a tritium filling facility, development of low-mass target supports, and development of levitated target coating.

21972 **(DOE/DP/40200—31) Direct-drive laser-fusion in the US.** McCrory, R.L.; Soures, J.M.; Audebert, P.; Barnouin, O.; Craxton, R.S.; Delettrez, J.; Epstein, R.; Forsley, L.; Hutchison, R.J.; Jacobs, S. (Rochester Univ., NY (USA). Lab. for Laser Energetics; Naval Research Lab., Washington, DC (USA); International Atomic Energy Agency, Vienna (Austria)). 1986. Contract FC08-85DP40200. 9p. (IAEA-CN—47/B-I-5; CONF-861106—21). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87005916.

From IAEA international conference on plasma physics and controlled nuclear fusion research; Kyoto, Japan (12 Nov 1986).

Direct-drive experiments at the University of Rochester's Laboratory for Laser Energetics (LLE) and the Naval Research Laboratory (NRL) are presently addressing issues in pellet compression and heating: efficiency of coupling of laser energy to the target and the coupling of absorbed energy to the fuel, drive uniformity, hydrodynamic stability, preheat arising from laser plasma instabilities and x-rays, and target diagnostics. The 24-beam, 2500-Joule, 351 nm OMEGA laser system at LLE has been used in an experimental effort to achieve high compressed DT fuel densities. Detailed hydrodynamic computer simulations at NRL predict that the growth rate of the ablative Rayleigh-Taylor instability is less than the classical values. Recent Rayleigh-Taylor experiments ar NRL are testing these predictions.

21973 **(DOE/DP/40200—32) Thermal self-focusing with multiple beams.** Craxton, R.S.; McCrory, R.L. (Rochester Univ., NY (USA). Lab. for Laser Energetics). Jul 1986. Contract FC08-85DP40200. 21p. (CONF-8607116—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87005917.

From 16. annual anomalous absorption conference; Lake Luzerne, NY, USA (13 Jul 1986).

Self-focusing in underdense plasmas in the presence of overlapping beams is of interest for multibeam laser-irradiation systems. The hydrodynamics/ray-tracing simulation code SAGE is used to model thermal self-focusing in two-dimensional line-focus geometry with beams incident obliquely at different angles. The conjecture that multiple overlapping beams may suppress self-focusing is investigated for parameters appropriate to reactor-sized targets; in particular, the dependence upon intensity, scale length and pulse width is examined. While the full problem is three-dimensional, insight may be gained from two-dimensional simulations.

21974 **(DOE/DP/40200—45) High power laser research and development at the Laboratory for Laser Energetics.** Soures, J.M.; McCrory, R.L.; Cerqua, K.A.; Craxton, R.S.; Hutchison, R.; Jacobs, S.D.; Kessler, T.; Kelly, J.; Mourou, G.; Seka, W. (Rochester Univ., NY (USA). Lab. for Laser Energetics). 1986. Contract FC08-85DP40200. 14p. (CONF-8609127—18). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87005921.

From SPIE's fiber LASE '86; Cambridge, MA, USA (14 Sep 1986).

As part of its research mission - to investigate the interaction of intense radiation with matter - the Laboratory for Laser Energetics (LLE) of the University of Rochester is developing a number of high-peak power and high-average-power laser systems. In this paper we highlight some of the LLE work on solid-state laser research, development and applications. Specifically, we discuss the performance and operating characteristics of Omega, a twenty-four beam, 4000 Joule, Nd:glass laser system which is frequently tripled using the polarization mismatch scheme. We also discuss progress in efforts to develop high-average-power solid-state laser systems with active-mirror and slab geometries and to implement liquid-crystal devices in high-power Nd:glass lasers. Finally we present results from a program to develop a compact, ultrahigh-peak-power solid-state laser using the concept of frequency chirped pulse amplification.

21975 **(DOE/DP/40211—1) Thermal transport studies using extreme ultraviolet spectroscopy: Final report for the period 31 August 1984-1 January 1986.** Griem, H.R. (Maryland Univ., College Park (USA). Lab. for Plasma and Fusion Energy Studies). Dec 1986. Contract AS08-84DP40211. 26p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87005040.

In view of the crucial importance of thermal transport for the hydrodynamic efficiency of inertial fusion, a complementary approach to the well established x-ray method for burnthrough measurements had been proposed using longer wavelength lines. Basically, this will allow access to a lower temperature region, possibly including some preheat. As proposed, a theoretical program was initiated to enhance the University of Rochester computer code by adding the various atomic processes needed to calculate quantitatively lithium-like line spectra. We contributed to the University of Rochester program through our various tests of atomic physics packages in LILAC. In April 1986, successful measurements were made for aluminum and titanium targets overcoated with up to 9 to 11 μm, respectively, of CH. A description of these measurements and of the conclusions reached by comparison with the code simulation constitutes the bulk of this report.

21976 (EUR-CEA-FC—1295, pp 21-24) **Scrape-off layer and coupling studies with the 3.7 GHz 18-waveguide multijunction grill on Petula.** Goniche, M.; David, C.; Tonon, G.; Rey, G.; Briand, P. (Association EURATOM-CEA, CEN Grenoble, 38, France. Dept. de Recherches sur la fusion controlee). May 1986. NTIS (US Sales Only), PC A04/MF A01. File Number DE87751062. (CONF-860412—Pt.1).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

A 500 kW-30 ms-3.7 GHz L.H. experiment has been operated on Petula in order to test the physical and technical options taken for the Lower Hybrid system of TORE SUPRA. The antenna used to launch the wave to the plasma is a modular 18-waveguide grill using mainly the multijunction effect. This provides a great simplification of the antenna, but the 6 waveguides of a module are tightly RF coupled. This paper presents the RF behaviour of such an antenna: self-matching properties of the multijunction, plasma R.F. wave coupling. These studies have been supported by scrape-off layer density measurements before and during the RF pulses.

21977 **(EUR-CEA-FC—1297) Generalized network representation of twist-reflectors.** Rebuffi, L. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee). Jun 1986. 36p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87751050.

A general network representation of different kinds of Twist-Reflector (TR) is presented. By mean of a TM- and TE-type modal representation of the fields, using a double equivalent circuit it is possible to describe a strip, parallel plate or corrugated surface T.R. Modal reflection coefficients GAMMA' and GAMMA'' are derived starting from Marcuvitz formulations [1 ] and adapting them to different tested mirrors. Theoretic-empirical circuit parameters are thus deduced to satisfy the two basic conditions for an optimal design. The strip and the plate thickness is considered to be finite, thus reducing the degree of approximation. Using this model, predicted theoretical values for the reflector efficiency are in close agreement with experimental results, thus permitting a correct design of different kinds of Twist-Reflector.

21978 **(GA-A—18418) Initial conditioning of the vessel wall and the graphite limiters in DIII [Doublet III]-D.** Brooks, N.H.; Petersen, P. (GA Technologies, Inc., San Diego, CA (USA)). Jun 1986. Contract AC03-84ER51044. 22p. (CONF-860522—23). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87005237.

From 7. international conference on plasma surface interactions in controlled fusion devices; Princeton, NJ, USA (5 May 1986).

The Doublet III tokamak has been rebuilt to accommodate in a single device both large dee-shaped limiters and single-null divertor plasmas (a = 0.67 m) with high elongation (b/a ≧ 2). The new vacuum vessel has been conditioned by a combination of 400°C baking, Taylor pulsed discharge cleaning (TDC), and rf-assisted glow cleaning (RGC). Tokamak operation began in February 1986 with an 0.5 MA discharge produced on the first day plasmas were attempted. Rapid achievement of high current (I ≧ 2.5 MA) tokamak discharges in the DIII-D device underscores the importance of high temperature bakeout in shortening the initial cleanup period for a vessel with large amounts of graphitic armor.

21979 **(GTFR—70) The sputtering and redeposition behaviour of $VBe_{12}$ compound and of Ti-Cu-Li composites within a fusion tokamak environment.** DeWald, A.B. Jr.; Brooks, J.N.; Krauss, A.R.; Gruen, D.M. (Georgia Inst. of Tech., Atlanta (USA). Fusion Research Center; Argonne National Lab., IL (USA)). Jan 1987. Contract AS05-78ET52025. 20p. NTIS, PC A02. File Number DE87005315.

$VBe_{12}$ compound and porous titanium composites infiltrated with a lithium bearing copper alloy have been investigated as a means of reducing fusion plasma impurities and sputter erosion associated with fusion tokamak limiter and divertor surfaces. These materials possess high temperature strength and melt-layer stability properties in conjunction with the self-sustainment of a low-Z overlayer that inhibits erosion of the underlying structural substrate. The sputter erosion and redeposition properties of these materials have been analyzed by calculating the sputtering coefficients via TRIM, which are subsequently used in the REDEP code to evaluate their performance for various plasma edge temperature regimes. The results have been compared to elemental beryllium, tungsten, and graphite on the basis of minimizing plasma impurities and material erosion, suppressing runaway self-sputtering, and/or enhancing thermal properties.

21980 **(HEDL-TME—86-13) Test results of lithium pool-air reaction suppression systems.** Jeppson, D.W. (Hanford Engineering Development Lab., Richland, WA (USA)). Feb 1987. Contract AC06-76FF02170. 117p. NTIS, PC A06/MF A01; 1; GPO Dep. File Number DE87006603.

Engineered reaction suppression systems were demonstrated to be effective in suppressing lithium pool-air reactions for lithium quantities up to 100 kg. Lithium pool-air reaction suppression system tests were conducted to evaluate suppression system effectiveness for potential use in fusion facilities in mitigating consequences of postulated lithium spills. Small-scale perforated and sacrificial cover plate suppression systems with delayed inert gas purging proved effective in controlling the lithium-air interaction for lithium quantities near 15 kg at initial temperatures up to 450°C. A large-scale suppression system with a sacrificial cover, a diverter plate, an inert gas atmosphere, and remotely retrievable catch pans proved effective in controlling lithium pool-air interaction for a 100-kg lithium discharge at an initial temperature of 550°C. This suppression system limited the maximum pool temperature to about 600°C less than that expected for a similar lithium pool-air reaction without a suppression system. Lithium aerosol release from this large-scale suppression system was a factor of about 10,000 less than that expected for a lithium pool-air reaction with no suppression system. Remote retrieval techniques for lithium cleanup, such as (1) in-place lithium siphoning and overhead crane dismantling, and (2) lithium catch pan removal by use of an overhead crane, were demonstrated as part of this large-scale test.

21981 (IAEA-CN—44/I-I-3, pp 403-411) **Experimental and theoretical investigations of compact toroid configurations with large-orbit particles.** Lovelace, R.V.; Fleischmann, H.H.; Jayakamar, R.; Litwin, C.; Mehanian, C.; Parker, M.R.; Seyler, E.; Sudan, R.N.; Taggart, D.P.; Turnbull, A.D. (Cornell Univ., Ithaca, NY). 1985. NTIS.

From 10. international conference on plasma physics and controlled nuclear fusion research; London, England (12-19 Sep 1984).

Experimental and theoretical progress has been made on toroidal plasma configurations (spheromaks) including an energetic, large-orbit, ion ring component. A particular advantage of the ion ring component is the stabilization of the tilt-shift modes without close-fitting metal walls, and the added flexibility of the possible reactor options of the configuration. The theory has now been devel-

oped to the point where definite stability predictions can be made on the percentage of the total current in the ion rings needed for stability as well as the optimum geometry. Experiments on the RECE-Christa device have succeeded in generating stable rings with about equal plasma and large-orbit fast electron currents.

21982 **(ILE—8508P) Suprathermal electron generation in cannonball targets.** (Osaka Univ., Suita (Japan). Inst. of Laser Engineering). Jul 1985. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700913.

Suprathermal (T/sub s/ = 20 — 300 keV) electron production in cannonball targets was investigated in Gekko laser fusion experiments. Very high temperatures (T/sub SH/ = 200 — 350 keV) and energy conversion rates (eta/sub SH/ = 10/sup -5/ - 10/sup -4/ J/J Str) were observed for the cannonball targets as compared to directly driven targets (T/sub SH/ = 20 — 200 keV, eta/sub SH/ = 10/sup -8/ — 10/sup -6/ J/J Str). Correlations of superthermal electron conversion with SRS and 3/2 ω/sub 0/ light conclusively indicated that these electrons were mainly generated by parametric processes in the region below n/sub c//4.

21983 (INIS-mf—10565, pp 38-41) **Thermal stability of cryogenic targets in laser experiments.** Koresheva, E.R.; Nikitenko, A.I. 1985. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780085.

Kratkie Soobshcheniya po Fizike. No. 3.

In Experimental and theoretical physics. Collection.

The problem of cryogenic target disruption in the laser thermonuclear synthesis chamber is under discussion. Estimates of target lifetime in the chamber are performed. When estimating target lifetime in a vacuum chamber with warm walls, it is necessary to consider a possibility of target disruption both at the expense of crystal growth in a DT-layer and increase of gas mass in a target center during heating. The lifetime in a chamber with Tsub(st)=300 K constitutes 0.034-0.7 s for two-layer cryogenic targets with fuel mass 3-40 μg.

21984 **(IPP—III/110) ASDEX papers at the 13th European conference on controlled fusion and plasma physics.** (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). May 1986. 149p. (CONF-860412—). NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274.

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

This report provides 29 ASDEX papers concerning pellet refuelling, confinement, high-beta plasma and MHD-equilibrium, heating by ICR, lower hybrid and current-drive, impurity studies and plasma diagnostics. All of these papers have been indexed separately.

21985 (IPP—III/110, pp 19-30) **Review on pellet fuelling.** Kaufmann, M. (Association Euratom-Max-Planck-Institut fuer Plasmaphysik, Garching, Germany, F.R.). May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

Injection of frozen hydrogen pellets was already proposed as a means of fuelling plasmas at an early stage of fusion research. After an extended period of technical development, gas gun pellet injectors are now available with speeds of up to 2000 m/s (in single-shot operation and in series of up to 7 shots per discharge). Centrifuges can deliver up to 80 pellets per discharge with speeds of up to 800 m/s. Substantial progress in understanding pellet ablation was achieved with the description of a cold gas mantle shielding the pellet against the hot plasma. For ohmic discharges with sufficiently high density, good agreement between this 'neutral shielding model' and the experimental observation of ablation was found. In the case of non-thermal electrons much faster ablation has been observed. The pellets explode at the plasma edge in extreme cases. With neutral injection part of the pellets often seems to be ablated outside the plasma. Inside the plasma enhanced ablation by fast ions has to be taken into account. For several years now a growing number of experiments with pellet injection have been conducted on hot plasmas. So far different influences on the plasma performance have been reported: Strong peaking of the density profile is usually also seen in cases where the pellet does not penetrate to the centre. In ohmic discharges with sufficient edge recycling it was observed that the averaged density increases and in parallel the particle and energy confinement are substantially improved. With growing neutral injection power, this improvement degrades, while the central particle and energy confinement remain enhanced. The peaked density profile is accompanied by a strong inward drift of high-Z material. The resulting radiation from the centre keeps the increase of the density limit below or equal to 100%.

21986 (IPP—III/110, pp 4-18) **Combined application of neutral injection, lower hybrid, and ion cyclotron resonance heating in ASDEX and synergetic effects.** Wagner, F.; Soeldner, F.X.; Steinmetz, K.; Becker, G.; Bosch, H.S.; Brocken, H.; Eberhagen, A.; Eckhartt, D.; Fussmann, G.; Gehre, O. May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

Confinement properties of ASDEX discharges are studied when NI and ICRH or NI and LH were applied simultaneously. ICRH leads to a larger change in plasma energy content when applied together with NI. At high power the β/sub p/-increases of NI and ICRH are additive corresponding to the total heating power. In the combination of NI and LH the β/sub p/-increase is the same when NI is applied to inductively or non-inductively driven plasma current despite the different current profiles. The effect of sawteeth on central confinement is described in detail in ohmically and beam heated plasmas as is the suppression of sawteeth by LH. The suppression of sawteeth by LH in low q/sub a/ beam heated plasmas leads to a substantial increase of β/sub p/. The H-mode can be realized with NI under current drive conditions. ICRH can cause the H-transition in combination with NI. The H-mode, however, can also be realized with ICRH alone.

21987 (IPP—III/110, pp 31-34) **Increase of the density limit in ASDEX by repetitive pellet injection.** Niedermeyer, H.; Buechl, K.; Kaufmann, M.; Lang, R.; Mertens, V.; Sandmann, W.; Becker, G.; Bosch, H.S.; Brocken, H.; Eberhagen, A. May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

Pellet injection is able to switch the confinement properties of a tokamak discharge fundamentally. This switching is possible with pellets penetrating to the half-radius (there are indications that even much smaller penetration depths are sufficient). Improved particle confinement and triangular density profiles permit to achieve extremely high central densities. Substantially improved energy confinement is provided in this transport regime.

21988 (IPP—III/110, pp 124-127) **Evolution of radiation power profiles in ASDEX H-mode discharges.** Mueller, E.R.; Janeschitz, G.; Smeulders, P.; Fussmann, G.; Kornherr, M.; Mast, K.F.; Becker, G.; Bosch, H.S.; Brocken, H.; Eberhagen, A. (Commission of the European Communities, Abingdon, UK. JET Joint Undertaking). May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

The paper compares the impurity radiation behaviour of two types of H-mode discharges. In the normal H-mode that reaches a quasi-stationary state the energy (and particle) losses within the outer plasma half-radius are characterized by the repetitive burst-like exhaust into the divertor and constantly moderate radiation power losses. In contrast, the burst-free variant of the H-mode with superior confinement properties is dominated by radiation losses growing continuously up to 100% of the heating power. The time evolution of the impurity concentration and the associated radiation losses at the plasma centre is hardly influenced by the kind of H-mode. If the concentration of medium-heavy metals in the burst-dominated H-mode plasma is raised to sufficiently high values, e.g. by the accumulation of intrinsic iron, the burst-free (or burst-deficient) H-mode is triggered which after a new accumulation period usually ends by a radiation collapse.

21989 (IPP—III/110, pp 128-131) **Impurity production during ICRF heating.** Janeschitz, G.; Fussmann, G.; Noterdaeme, J.M.; Steinmetz, K.; Becker, G.; Bosch, H.S.; Brocken, H.; Eberhagen, A.; Gehre, O.; Gernhardt, J. May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

ICRF heating at 2Ω/sub CH/ was investigated for a variety of different target plasmas and heating regimes. In all cases a significant increase of the radiated power, caused mainly by a higher iron concentration in the plasma, is observed. Neither the moderately improved particle confinement nor a reduction of impurity screening on account of changed plasma edge parameters is responsible for the high radiation losses, but enhanced wall erosion is required to explain the experimental data. The impurity production mechanisms are not yet fully understood. Impurity sputtering by oxygen and carbon, however, could be experimentally excluded as possible production processes. In all experiments a clear anticorrelation between wave absorption and impurity production was observed. Moreover, we find that suprathermal ions are produced in the plasma edge region by the non-absorbed ICRF power. It is assumed that these particles are responsible for the excessive impurity production.

21990 (IPP—III/110, pp 132-135) **Wall carbonization in ASDEX: A collation of characteristic results.** Poschenrieder, W.; Fussmann, G.; Gierke, G. v.; Mast, F.; Niedermeyer, H.; Roth, J.; Soeldner, F.X.; Steinmetz, K.; Verbeek, H.; Wagner, F. May 1986. NTIS (US Sales Only), PC A07/MF A01. File Number DE87751274. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

The aim of this presentation is to describe the procedures of carbonization and decarbonization followed on ASDEX, and to summarize the most significant changes of discharge parameters observed under the various experimental conditions with carbonized walls.

21991 (IPP-JET—32) **Reemission, trapping, and desorption of implanted deuterium from JET samples.** Scherzer, B.M.U.; Boergesen, P.; Moeller, W. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Jul 1986. 22p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87751273.

Gas reemission from first-wall samples of JET was measured during 1-22 keV deuterium ion bombardment. The sample temperature was varied between room temperature and 970 K. The samples were pieces taken from the 1984-graphite limiter and 6 long-term samples (LTS) of Inconel and Ni. The near surface deuterium inventory was determined by nuclear reaction analysis (NRA). In some cases thermal desorption spectra of the implanted samples were taken. No significant differences were found between samples from different positions in the torus. Instantaneous reemission is found for low-energy (1 keV) D/sup +/-bombardment of the limiter samples due to diffusion in the deposited impurity layer. Limiter samples that have been implanted to saturation at room temperature show a release peak when further bombarded at a higher temperature. On Inconel LTS the reemission time constant tau/sub R/ is found to decrease with increasing flux. The accumulated D inventory is only partly trapped within the ion range. On Ni-LTS the deposited impurity layer undergoes a modification when the sample is heated from 250/sup 0/C to 317/sup 0/C increasing the trapped D inventory by almost two orders of magnitude.

21992 (IPPJ-DT—119) **Calorimetrical measuring system for neutral beam teststand.** (Nagoya Univ. (Japan). Inst. of Plasma Physics). Sep 1985. 18p. (In Japanese). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700961.

This paper describes a small data acquisition system prepared for a beam profile measurement using a beamline calorimeter. The system is composed of an LSI-11/23 microcomputer included in a CAMAC crate and an electronic system for detecting outputs of thermocouples installed on a V-shaped calorimeter. An example of the experimental results of the beam divergence measurements is also shown.

21993 (IPPJ-DT—121) **Development of 120 keV 10 MW neutral beam teststand.** (Nagoya Univ. (Japan). Inst. of Plasma Physics). Oct 1985. 76p. (In Japanese). NTIS (US Sales Only), PC A05/MF A01. File Number DE87700962.

This is a report of design and construction of 120 keV, 10 MW Neutral Beam Test Stand (10 MW NBTS) which has been prepared for the development of NB Injector on R-project in the 1981 to 1982 fiscal year. The Test Stand is designed to simulate NBI on the project and the aim is test for the performance of many components and the over all performance of beam line. A design of the beam line (which is composed of a neutralizer cell, a 180 deg deflection magnet, calorimeter, and ion dump, etc.), 1/4 size ion source, power supply system, and sequence and control are described, and the test results are also given briefly. Main features of the NBTS are as follows: (1) A powerful ion source of 120 keV, 75 A for 1 sec, (2) Gate Turn Off (GTO) accel power supply system of 120 keV, 10 MW, in which all the components are fabricated by the solid-state elements, (3) highspeed open-type cryocondensation pump for the vacuum system. Test results of each component are compared with the design value of them. Overall test including the beam extraction of up to 120 keV, — 20 A for 1 sec is satisfactorily completed by applying 1/4 size model ion source.

21994 (ITEF—122(1985)) **Numerical investigation of resistive longitudinal instability of nonbunched beam in heavy-ion rings.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87700977.

Using quasilinear theory numerical investigation of nonlinear stage of development of resistive longitudinal instability of nonbunched charged particle beam in heavy-ion rings for inertial synthesis is carried out. Using quasilinear theory for the system of the Vlasov equations this instability may be suppresed by forming a beam with a special form of particle momentum distribution function having a so called "tails". Calculations carried out for one-mode regime showed that particle diffusion from stationary distribution region to the resonance of the beam coherent oscillations result in appearance of self-stabilized distribution function "tail". Dependence of particle number in the "tail" on longitudinal coupling impedance and other beam parameters is estimated. It is shown that in the frame of quasilinear theory self-stabilization mechanism is effective only in case when the beam is not far from instability region boundary calculated according to linear theory. 9 refs.; 3 figs.

21995 (JAERI-M—85-176) **Summary of conceptual design study of fusion experimental reactor (FER). FY 1984 report.** (Japan Atomic Energy Research Inst., Tokyo). Nov 1985. 92p. (In Japanese). NTIS (US Sales Only), PC A05/MF A01. File Number DE87701004.

Since 1980 the design study has been conducted at JAERI for the Fusion Experimental Reactor (FER) which has been proposed to be the next machine to JT-60 in the Japanese long term program of fusion reactor development. Starting from 1984 FER design is now being reviewed and redesigned. This report is the summary of the report which describes the results obtained in the review and redesign activities in 1984. The following three steps are followed in those activities; critical issues study step in which FER critical issues were reviewed and the frame of FER design was revised, torus structure selection step in which a few options within the frame for FER were examined and design step in which major components of the torus structure were designed. The newly established frame for FER design is as follows: 1) Plasma: Self-ignition, 2) Operation scenario: Quasi-steady state operation with long burn pulse, 3) Neutron fluence on the first wall: 0.3 MWY/m/sup 2/, 4) Blanket: Non-tritium breeding blanket with test modules for breeding blanket development, 5) Magnets: Superconducting Magnets.

21996 **(JAERI-M—85-179) Parametric and alternative studies for fusion experimental reactor (FER) (FY 1984).** (Japan Atomic Energy Research Inst., Tokyo). Jan 1986. 466p. (In Japanese). NTIS (US Sales Only), PC A20/MF A01. File Number DE87701005.

Since 1980 the design study has been conducted at JAERI for the Fusion Experimental Reactor (FER) which has been proposed to be the next machine to JT-60 in the Japanese long term program of fusion reactor development. Starting from 1984 FER design is being reviewed and redesigned. This report is a part of the interim report which describes the results obtained in the review and redesign activities in FY 1984. This report includes the following parametric and alternative studies for the FER reference design: 1) parametric studies concerning with core plasma magnets, and operation scenario and power supply, 2) tritium breeding blanket, 3) the study for the steady state operation FER, 4) OTHERS.

21997 **(JAERI-M—85-189) Verification experiment of 15T-split coil(Splitar-15).** (Japan Atomic Energy Research Inst., Tokyo). Nov 1985. 14p. (In Japanese). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701006.

In order to test the 12 T-10 kA superconducting cables, which were developed for the high field toloidal coils, the split backup field coil is under construction. This split coil generate very high field of 15 T with backup field, and is operated with large winding current density of 70 A/mm/sup 2/ due to the geometrical limit. This split coil is named 'Splitar-15'. The following results are obtained through the R and D works for the Splitar-15. (1) To generate the maximum field of 15.25 T with the average winding current density of 140 A/mm/sup 2/ is verified by the charging test of the R and D coil. (2) By the optimization of the heat treatment condition, the high stabilized conductor, which has small residual resistance and large critical current density, is developed. (3) By the reduction of the superconducting filament diameter, the high magnetically stable conductor, in which flux jump is not almost occurred, is developed.

21998 **(JAERI-M—85-204) Thermal cycle testing of TiC-coated molybdenum by infrared heating.** (Japan Atomic Energy Research Inst., Tokyo). Dec 1985. 10p. (In Japanese). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701007.

TiC films which were composed of various C/Ti ratios were formed on molybdenum substrates by the reactive evaporation method, and the adhesion of the films were investigated by a cyclic infrared heating. The result shows that stoichiometric TiC films have the best adhesive characteristics for molybdenum. The reactive evaporation method will be applied to the in-situ coating for JT-60.

21999 **(JAERI-M—85-205) Annual report of the Fusion Research Center for the period of April 1, 1984 to March 31, 1985.** (Japan Atomic Energy Research Inst., Tokyo). Jan 1986. 231p. NTIS (US Sales Only), PC A11/MF A01. File Number DE87701008.

Research and development activities of the Fusion Research Center (Department of Large Tokamak Development and Department of Thermonuclear Fusion Research) from April 1984 to March 1985 are described. The JT-60 program progressed as scheduled. Commissioning of the JT-60 tokamak was completed by the end of the period under review. In parallel with installation and test of the tokamak machine, installation of basic diagnostic instruments and examination of the procedure for experiment had been made to meet the first phase Joule heating experiment. (The first plasma discharge was recorded on April 8, 1985). Construction of auxiliary heating systems had continued. A medium-sized tokamak, JFT-2M, had been operated for high-power ICRF heating and ECH assisted LH current drive experiments. Installation of a power supply for plasma shaping in JFT-2M was completed. In the field of plasma theory, detailed analysis had been made on nonlinear kink/tearing modes in a plasma with free boundary and also on ICRF heating. Development of a high-voltage, high-current He ion source for JT-60 plasma diagnostics had proceeded successfully, and tests of JT-60 LH and ICRF luanchers as well. Surface erosion of a new ceramics, SiC with BeO addition by proton bombardment was studied. In IEA's Large Coil Task, three coil test was made at ORNL. A 11 T experiment of TMC-1, a large-bore Nb/sub 3/Sn coil was completed. Commissioning tests of tritium handling facilities had proceeded in the Tritium Process Laboratory. Design studies of the Fusion Experimental Reactor (FER) and INTOR had been advanced.

22000 **(JAERI-M—85-215) Development of the piezoelectric gas injection valve for JT-60.** (Japan Atomic Energy Research Inst., Tokyo). Jan 1986. 87p. (In Japanese). NTIS (US Sales Only), PC A05/MF A01. File Number DE87701011.

Piezoelectric gas injection valve (PEV) for JT-60 have been developed which was a piezo-electric element. The raliability of the PEV under the actual condition of high magnetic fields and high temperatures are veryfied, and it became clear that the PEV had enough throughput range and sufficient repetability for long life throughput characteristics. Remarkables of the developed PEV are summarized as follows, (1) The maximum throughput rate, responce time and helium leakage rate satisfy the desiged specifications. (2) Throughput equation for PEV is clarified by comparison with experiment. (3) Reliabilities of PEV under the actual condition during coil power test become clear.

22001 **(JAERI-M—86-006) MHD equilibrium analysis method of JT-60 based on magnetic measurements.** (Japan Atomic Energy Research Inst., Tokyo). Feb 1986. 52p. (In Japanese). NTIS (US Sales Only), PC A04/MF A01. File Number DE87701019.

A code has been developed to calculate MHD equilibrium configuration in JT-60 from magnetic pick-up signals, plasma current, and external coil currents. To investigate equilibrium configuration, we must seek out a solution of Grad-Shafranov equation which reproduces experimental magnetic data. Fast boundary identification using discrete filaments at prespecified locations proved to be effective in the JT-60 divertor configuration. When we solve the MHD equilibrium as a fixed boundary problem incorporating results of the fast boundary identification, iterative calculations converge rapidly. We derived an efficient method of modifying unknown parameters which specify plasma current profile to obtain nonlinear least-squares solutions. Poloidal $\beta$ value and internal inductance can be separated in the JT-60 configuration with nearly circular cross-section. The estimation error of $\beta$/sub p/ is less than +- 0.05 when input magnetic data contains 1% error.

22002 **(JAERI-M—86-008) Numerical studies on JT-60 divertor plasma characteristics.** (Japan Atomic Energy Research Inst., Tokyo). Feb 1986. 58p. (In Japanese). NTIS (US Sales Only), PC A04/MF A01. File Number DE87701021.

The characteristics of divertor plasma in JT-60 were numerically studied both for Joule heated plasma and for high power heated one. The effects of parameters related to divertor plasma or main plasma on these characteristics were analyzed. The former parameters include divertor chamber shape, divertor configuration, width of scrape-off layer, effective pumping speed, radiation loss and so on. The latter parameters include main plasma density, input power, particle diffusion coefficient and safety factor. The dominant parameters on divertor plasma characteristics and the conditions required to produce cold and dense divertor plasma were clarified. In order to investigate the above subject, a new simulation model was developed by which both divertor plasma and main plasma can be consistently analyzed.

22003 **(Juel—2060) Measurement of the space dependent tritium production rates and energy depositions in a fusion reactor blanket model by thermoluminescence detectors (TLD).** Goergen, G. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Reaktorentwicklung; Technische Hochschule Aachen (Germany, F.R.)). Apr 1986. 164p. (In German). NTIS (US Sales Only), PC A08/MF A01. File Number DE87751266.

The space dependent energy deposition and tritium production rate for a lithium-metal fusion reactor blanket model is determined using the computer programs MORSE-CG and MACK-IV. The glowcurves of LiF TLD which are irradiated in the blanket by

14.1 MeV source neutrons are divided in several Gauss-peaks by computer. The measured peak areas can be compared to the calculated space dependent energy depositions for the different reactions in the TLD. A new method has been developed to measure the space dependent tritium production rate generated by the different Li-isotopes in the blanket using TLD. The glowcurves of the TLD are analysed and compared after irradiation with neutrons, $\alpha$-particles and deuterons of different energies.

22004 **(KFK—4105) Study on tritium separation from LiPb by permeation into Na or NaK and cold trapping.** Reimann, J.; Malang, S. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Reaktorbauelemente). Oct 1986. 87p. NTIS (US Sales Only), PC A05/MF A01. File Number DE87751267.

The tritium separation and recovery method discussed in this report appears to be a very promising technique for a LiPb self cooled blanket where an intermediate loop is required for safety reasons anyway. This technique can be also of interest for a water cooled LiPb blanket if a tritium purification unit exists in the water loop. Considerable work has been done on cold trapping of hydrogen from Na flows for the fast breeder technology. More work is needed in respect to fusion blanket applications, especially, on hydrogen removal from cold traps by thermal hydride decomposition. This report summarizes the state of the art on the precipitation and decomposition processes and discusses practical experiences with cold traps. Some ideas on a fusion blanket cold trap are outlined and a research program covering the more fundamental aspects for the next future is proposed.

22005 **(KFK—4142) Simple method to calculate neutron energy deposition in ICF targets.** Goel, B.; Henderson, D. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Neutronenphysik und Reaktortechnik). Oct 1986. 18p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87751276.

In most ICF-target simulation calculations $\alpha$'s and other charged particles are supposed to be reabsorbed in the plasma whereas neutrons are often allowed to escape without interaction. However, in reactor size targets neutrons lose about the same amount of energy in the DT-fuel as $\alpha$-particles and can considerably influence the burn characteristics of the target. In the present paper a simple method to account for neutron-fuel interaction is presented. Results are compared with Monte-Carlo and S/sub N/ transport calculations. The effect of neutron energy deposition in the fuel on the performance is shown on the 4 mg DT-target of the HIBALL reactor.

22006 **(KMSF-U—1821) A novel $^3$He scintillation detector.** Knoll, G.F.; Henderson, T.M.; Felmlee, W.J. (Michigan Univ., Ann Arbor (USA); KMS Fusion, Inc., Ann Arbor, MI (USA)). 1986. Contract AC08-82DP40152. 7p. (CONF-861007—25). NTIS, PC A02. File Number DE87003424.

From Nuclear science and nuclear power systems symposium; Washington, DC, USA (29 Oct 1986).

A $^3$He scintillation detector of unique design has been fabricated and tested. It incorporates high-pressure helium gas contained within small spherical glass shells dispersed in a plastic scintillator matrix. The detector displays a unique combination of properties including high detection efficiency, fast response, and convenient physical form.

22007 **(KMSF-U—1824) Classical and holographic interferometry systems combined to document inertial fusion experiments.** Ankney, J.S.; Busch, G.E. (KMS Fusion, Inc., Ann Arbor, MI (USA)). 1986. Contract AC08-82DP40152. 4p. (CONF-861038—7). NTIS MF A01; 2; GPO Dep. File Number DE87003425.

From OSA/APS international laser science conference; Seattle, WA, USA (20 Oct 1986).

An optical system has been developed which is used to document inertial fusion experiments. It records both classical interferograms of solid hydrogen isotope layers within the hollow spherical fuel container prior to the shot and holographic interferograms of the plasma during the implosion. This optical system has the advantages of visible and uv utility, 2 to 4 $\mu$m resolution and a low space requirement. Both systems share a catadioptric objective lens and a refractive relay lens. The visible classical interferometric beam and the uv pulsed holographic probe follow different off-axis paths within the object cone of the lenses. To document the solid layer, the beam is diverted to a shearing cube interferometer using a lens-mirror assembly on a sliding stage. This assembly then slides out of the way before the implosion to admit the uv probe to the holographic camera, which records four holographic interferograms of the plasma separated in time by 40 to 400 ps. The two operational modes, shearing interferometer and holographic, are serial; switching from one to the other requires only seconds.

22008 **(LA-UR—86-3556) Tritium fuel cycle technology at the Tritium Systems Test Assembly.** Anderson, J.L.; Bartlit, J.R. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 5p. (CONF-8610214—1). NTIS, PC A02. File Number DE87001964.

From International symposium on fusion reactor blanket and fuel cycle technology; Tokai-mura, Japan (27 Oct 1986).

The Tritium Systems Test Assembly (TSTA) at Los Alamos is charged with developing the tritium technology required to fuel a fusion reactor. A second major task is the development and evaluation of personnel and environmental protection systems associated with the tritium handling facilities at a fusion reactor. Tritium experiments were initiated in June 1984 when 10 g of tritium was introduced into the cryogenic distillation isotope separation system. In September 1986 the tritium inventory was increased to 50 g, the fuel cleanup system was used to remove impurities from the gas and extremely pure (>99.9%) tritium was prepared in the isotope separation system. The success of the TSTA operation is demonstrated by the fact that from June 1984 through September 1986 more than 5 x $10^8$ Ci of tritium have been processed at TSTA. During this period less than 15 Ci of tritium have been released to the environment. Personnel exposures during this time have totaled less than 100 person-mRem. Experiments performed during this period include the tests on the isotope separation and fuel cleanup system; tests to study the contamination and decontamination of surfaces exposed to elemental tritium and tritium oxide; evaluation of a commercial getter for glovebox atmosphere detritiation tritium testing on a palladium alloy membrane diffuser; and evaluation of a ceramic electrolysis cell for decomposing tritiated water. The latter two experiments are being done in cooperation with the Japan Atomic Energy Research Institute.

22009 **(PPPL—2394) Measurements of fusion product emission profiles in tokamaks.** Strachan, J.D.; Heidbrink, W.W.; Hendel, H.W.; Lovberg, J.; Murphy, T.J.; Nieschmidt, E.B.; Tait, G.D.; Zweben, S.J. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Nov 1986. Contract AC02-76CH03073. 34p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87005628.

The techniques and results of fusion product emission profile measurements are reviewed. While neutron source strength profile measurements have been attempted by several methods, neutron scattering is a limitation to the results. Profile measurements using charged fusion products have recently provided an alternative since collimation is much easier for the charged particles.

22010 **(SAND—87-0191C) PBFA II [Particle Beam Fusion Accelerator 2] APEX pulse shaping project.** Crow, J.T. (Sandia National Labs., Albuquerque, NM (USA)). 1986. Contract AC04-76DP00789. 7p. (CONF-861256—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87005531.

From Topical conference on the physics of radiatively driven ICF targets; Albuquerque, NM, USA (8 Dec 1986).

The APEX Project will develop a system of ion beam pulse-shaping and target standoff for installation on PBFA II. The project will include development of an efficient ion diode and plasma transport channels for ion beam propagation over several meters. The ion beam will have a pulse shape, power and area appropriate for achieving gain from a D-T fusion target. The system, as presently conceived, will use a single diode, single transport channel, and a target designed for single-sided illumination. The basic APEX system is described.

22011 **(UCID—20773-Vol.1) MINIMARS conceptual design: Final report.** Lee, J.D. (ed.). (Lawrence Livermore National Lab., CA (USA); Oak Ridge National Lab., TN (USA); Wisconsin Univ., Madison (USA); General Dynamics Corp., San Diego, CA (USA). Space Systems Div.; Grumman Aerospace Corp., Bethpage, NY (USA); Canadian Fusion Fuels Technology Project, Toronto, Ontario). Sep 1986. Contract W-7405-ENG-48. 532p. NTIS, PC A23/MF A01; 1; GPO Dep. File Number DE87006584.

This volume of the conceptual design report contains detailed information on the following: (1) plasma engineering, (2) tandem mirror optimization code, (3) configuration, (4) assembly and maintenance, (5) availability, (6) site and facilities, (7) magnet design, (8) end-cell shielding, (9) drift pumping system, (10) rf systems, (11) negative-ion neutral beam injection system, (12) sloshing-ion beamline, and (13) power balance and electrical systems. (MOW)

22012 **(UCID—20994) MacFuse: A laser fusion simulation code for the Macintosh.** Harrison, A.K. (Lawrence Livermore National Lab., CA (USA)). Feb 1987. Contract W-7405-ENG-48. 43p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87006599.

This paper describes an inertial-confinement-fusion (ICF) simulation code and associated postprocessor written and run on a Macintosh Plus microcomputer. The objectives of this work were the following: to give the author experience in ICF target design; to familiarize him with physics, numerical methods and code structure typical of a target design code; and to explore the extent to which target design could be carried out with limited computing resources. 8 refs., 48 figs.

22013 **(UCRL—15871) Design and operation of 140 GHz gyrotron oscillators for power levels up to 1 MW CW.** Jory, H.; Bier, R.; Craig, L.J.; Felch, K.; Ives, L.; Lopez, N.; Spang, S. (Varian Associates, Inc., Palo Alto, CA (USA); Lawrence Livermore National Lab., CA (USA)). Dec 1986. Contract W-7405-ENG-48. 7p. NTIS, PC A02. File Number DE87006683.

Varian has designed and tested 140 GHz gyrotron oscillators that have generated output powers of 100 kW CW and 200 kW for 1 ms pulses. Upcoming tubes will be designed to operate at power levels of 200 kW CW and ultimately up to 1 MW CW. The important design considerations which are addressed in the higher power tubes include the design of the electron gun, interaction circuit, and output window. These issues will be discussed and the results of the earlier 140 GHz gyrotron work at Varian will be summarized.

22014 **(UCRL—94044) Radiation associated with an inertial confinement fusion laser system.** Singh, M.S. (Lawrence Livermore National Lab., CA (USA)). 3 Dec 1986. Contract W-7405-ENG-48. 12p. (CONF-870219—10). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87003814.

From Midyear topical symposium of the Health Physics Society: health physics of radiation-producing machines; Reno, NV, USA (8 Feb 1987).

The primary objective the LLNL Laser Fusion Program is to understand and develop the science and technology of inertial confinement fusion. Nova, a 100-TW/100-kJ laser system, has demonstrated efficient compression, ignition, and burn of D-T fusion fuel. The LLNL fusion computer program (LASNEX) and experiments strongly support achieving high gain with the proposed multi-MJ laser system. In this paper, I examine the prompt and residual radiations associated with these laser systems. 3 refs., 6 figs., 4 tabs.

22015 **(UCRL—95759) High current density magnets for INTOR and TIBER.** Miller, J.R.; Henning, C.D.; Kerns, J.A.; Slack, D.S.; Summers, L.T.; Zbasnik, J.P. (Lawrence Livermore National Lab., CA (USA)). Dec 1986. Contract W-7405-ENG-48. 37p. (CONF-861253—1). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87003819.

From International tokamak reactor workshop; Vienna, Austria (1 Dec 1986).

The adoption of high current density, high field, superconducting magnets for INTOR and TIBER would prove beneficial. When combined with improved radiation tolerance of the magnets to minimize the inner leg shielding, a substantial reduction in machine dimensions and capital costs can be achieved. Fortunately, cable-in-conduit conductors (CICC) which are capable of the desired enhancements are being developed. Because conductor stability in a CICC depends more on the trapped helium enthalpy, rather than the copper resistivity, higher current densities of the order of 40 A/mm$^2$ at 12 T are possible. Radiation damage to the copper stabilizer is less important because the growth in resistance is a second-order effect on stability. Such CICC conductors lend themselves naturally to niobium-tin utilization, with the benefits of the high current-sharing temperature of this material being taken to advantage in absorbing radiation heating. When the helium coolant is injected at near the critical pressure, Joule-Thompson expansion in the flow path tends to stabilize the fluid temperature at under 6 K. Thus, higher fields, as well as higher current densities, can be considered for INTOR or TIBER.

22016 **Operation of a Dudnikov type Penning source with $LaB_6$ cathodes.** Leung, K.N.; DeVries, G.J.; Ehlers, K.W.; Jackson, L.T.; Stearns, J.W.; Williams, M.D.; McHarg, M.G.; Ball, D.P.; Lewis, W.T.; Allison, P.W.; and others. (Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Review of Scientific Instruments;* **58**: No. 2, 235-239(Feb 1987). Contract AC03-76SF00098.

The Dudnikov type Penning source has been operated successfully with low work function $LaB_6$ cathodes in a cesium-free discharge. It is found that the extracted $H^-$ current density is comparable to that of the cesium-mode operation and $H^-$ current density of 350 mA/cm$^2$ have been obtained for an arc current of 55 A. Discharge current as high as 100 A has also been achieved for short pulse durations. The $H^-$ yield is closely related to the source geometry and the applied magnetic field. Experimental results demonstrate that the majority of the $H^-$ ions extracted are formed by volume processes in this type of source operation.

22017 **Recyclotron III, a recirculating plasma fusion system.** Jarnagin, W.S. US Patent 4,639,348. 27 Jan 1987. Filed date 13 Nov 1984. vp.

This patent describes a recyclotron nuclear fusion system comprising recyclotrons. Each recyclotron comprises cyclotron means for receiving and accelerating charged particles in spiral and work conservative pathways. An output means forms a beam from particles received from the cyclotron means; (i) the cyclotron means comprising (a) a channel shaped electromagnet having a pair of indented polefaces, oriented along an input axis and defining an input axis and defining an input magnetic well, (b) a pair of elongated linear electrodes centered along the input magnetic well arranged generally parallel to the input axis and having a gap therebetween, (c) tuned oscillator means connected to the electrodes for applying an oscillating electric potential thereto, (ii) the output means comprising (e) inverter means comprising an electromagnet having a polarity opposite that of the channel shaped electromagnet oriented contigously therealong for extracting fully accelerated particles from the cyclotron means, and (f) reinverter means comprising an electromagnet having a polarity the same as that of the channel shaped electromagnet for correcting the flightpath of the extracted particles.

22018 **Production of /sup 91/Nb, /sup 94/Nb, and /sup 95/Nb from Mo by 14.5—14.8 MeV neutrons.** Greenwood, L.R.; Doran, D.G.; Heinisch, H.L. (Argonne National Laboratory, Argonne, Illinois 60439). *Physical Review* [*Section*] *C: Nuclear Physics;* **35**: No. 1, 76-80(Jan 1987). Contract W-31-109-ENG-38.

Production cross sections for /sup 94/Nb(2.03 x 10$^4$ yr) have been measured from enriched /sup 94/Mo and /sup nat/Mo. The samples were irradiated by 14.5—14.8 MeV neutrons and the cross sections were measured by gamma spectroscopy. The cross section for the /sup 95/Mo(n,np+d)/sup 94/Nb reaction was deduced from the difference in /sup 94/Nb activity in the natural and enriched Mo samples. Cross sections were also determined for the /sup 95/Mo(n,p)/sup 95/Nb, /sup 92/Mo(n,x)/sup 91/Nb/sup m/, and /sup 98/Mo(n,$\alpha$)/sup 95/Zr reactions, all being in good agreement with previous data. Our data can also be used to estimate the

production of the long-lived (700 yr) ground state of /sup 91/Nb/ sup g/ from /sup 92/Mo.

22019 **(UCRL-Trans—12153) Conceptual design of negative-ion-based 500 keV, 20 MW neutral beam injector.** Horiike, Hiroshi; Ohara, Yoshihiro; Okumura, Yoshikazu; Shibata, Takemasa; Tanaka, Shigeru. (Lawrence Livermore National Lab., CA (USA); Japan Atomic Energy Research Inst., Tokyo). Jan 1987. Contract W-7405-ENG-48. Translation of JAERI-M86-04, April 1986. 195p. NTIS, PC A09/ MF A01; 1; GPO Dep. File Number DE87005504.

The conceptual design of the source plasma generator and the accelerating system is presented. Three candidate systems are then examined, each with a different neutralizing cell. The system having a very long neutralizer was judged to be the most suitable to the reactor considered. It was designed in detail. The long neutralizer (30 m) has many advantages: (1) the ion source can be located far from the reactor, permitting a narrow injection tube and tangential injection angle; (2) neutron shielding is easy because the solid angle of the beam line is very small; (3) complex components are removed from the vicinity of the reactor.

22020 **Effect of capsule aspect ratio on hydrodynamic efficiency.** Pollaine, S.M.; Lindl, J.D. (Lawrence Livermore National Lab., CA). *Nuclear Fusion;* **26**: No. 12, 1719-1723(Dec 1986).

Using LASNEX, the authors investigate the effect of initial fuel aspect ratio on the hydrodynamic efficiency and implosion stability of 1 mg ICF capsules directly driven with 0.27 μm light. It is concluded that these capsules will be either hydrodynamically inefficient, with less than 8% of the incident laser energy converted into fuel kinetic energy, or hydrodynamically unstable, with an in-flight aspect ratio greater than 80, unless the instability growth rate can be reduced to a small fraction of its classical value. 4 references, 10 figures.

22021 **Heavy ion fusion. Report on the international symposium, held at Washington, DC, USA, 27-29 May 1986.** Bangerter, R.O.; Keefe, D. (Lawrence Livermore National Lab., CA). *Nuclear Fusion;* **26**: No. 12, 1741-1747(Dec 1986).

This report on the International Symposium on Heavy Ion Fusion held May 27-29, 1986 summarizes the problems and achievements in the areas of targets, accelerators, focussing, reactor studies, and system studies. The symposium participants recognize that there are large uncertainties in Heavy Ion Fusion but many of them are also optimistic that HIF may ultimately be the best approach to fusion. 1 table.

22022 **A folded waveguide coupler for plasma heating in the ion cyclotron range of frequencies.** Owens, T.L. (Mc Donnell Douglas Astronautics Co., St. Louis, MO 63166). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Plasma Science;* **PS-14**: No. 6, 934-946(Dec 1986).

A new type of waveguide coupler for plasma heating experiments in the ion cyclotron range of frequencies (ICRF) is introduced. The coupler consists of a series of interleaved metallic vanes within a rectangular enclosure analogous to a very wide simple rectangular waveguide that has been "folded" several times. At the mouth of the coupler a plate is attached which contains coupling apertures in each "fold" or every other "fold" depending upon the application. This plate serves primarily as a wave field polarizer that converts coupler fields to the polarization of the fast magnetosonic wave within a plasma. Theoretical estimates indicate that the folded waveguide coupler is capable of high-efficiency multimegawatt operation into a plasma.

22023 **Advantages of high-field tokamak for fusion reactor development.** Cohn, D.R.; Bromberg. L. (MIT Plasma Fusion Center, Cambridge, MA). *Journal of Fusion Energy;* **5**: No. 3, 161-170(Sep 1986).

High-field designs could reduce the cost and complexity of tokamak reactors. Moreover, the certainty of achieving required plasma performance could be increased. Strong Ohmic heating could eliminate or significantly decrease auxiliary heating power requirements and high values of n/tau/ /SUB e/ could be obtained in modest-size plasmas. Other potential advantages are reactor operation at modest values of B, capability of higher power density and wall loading, and possibility of operation with advanced fuel mixtures. Present experimental results and basic scaling relations imply that the parameter $B^2a$, where B is the magnetic field and a is the minor radius, may be of special importance. A superhigh-field compact ignition experiment with very high values of $B^2a$ (e.g., $B^2a=150$ $T^2$ m) has the potential of Ohmically heating to ignition. This short-pulse device would use inertially cooled copper plate magnets. Compact engineering test reactor and/or experimental hybrid reactor designs would use steady-state, water-cooled copper magnets and provide long-pulse operation. Design concepts are also described for demonstration / commercial reactors. These devices could use high-field superconducting magnets with 7-10 T at the plasma axis.

22024 **Fast-fission tokamak breeder reactors.** Jasshy, D.L.; Berwald, D.H.; Garner, J.; Lee, J.D.; Maya, I.; Moir, R.W.; Whitley, R.H.; Wong, C.P.C. (Princeton Plasma Physics Laboratory, Princton, NJ). *Journal of Fusion Energy;* **5**: No. 3, 171-180(Sep 1986).

A fast-fission blanket around a fusion plasma exploits high neutron multiplication for superior breeding and high-energy multiplication to generate significant net electrical power. A major improvement over previous fast-fission blanket concepts is the use of mobile fuel, namely a pebble-bed configuration with helium cooling. Upon loss of coolant, the mobile fuel can be gravity-dumped to a separately cooled dump tank before excessive temperatures are reached. The pebble bed is also compatible with rapid fuel exchange and a low-cost reprocessing method. With the ignited tokamak plasma producing 620 MW of fusion power, the net electric power is 1600 MW /SUB e/ and the annual fissile production exceeds 3 tonnes.

22025 **The need and prospects for improved fusion reactors.** Krakowski, R.A.; Hagenson, R.L.; Miller, R.L. (Los Alamos National Laboratory, Los Alamos, NM). *Journal of Fusion Energy;* **5**: No. 3, 213-230(Sep 1986).

Conceptual fusion reactor studies over the past 10-15 yr have projected systems that may be too large, complex, and costly to be of commercial interest. One main direction for improved fusion reactors points toward smaller, higher-power-density approaches. First-order economic issues (i.e., unit direct cost and cost of electricity) are used to support the need for more compact fusion reactors. The results of a number of recent conceptual designs of reversed-field pinch, spheromak, and tokamak fusion reactors are summarized as examples of more compact approaches. While a focus has been placed on increasing the fusion-power-core mass power density beyond the minimum economic threshold of 100-200 kWe/tonne, other means by which the overall attractiveness of fusion as a long-term energy source are also addressed.

22026 **Fueling of naval and space reactors with U-233 produced in a fusion reactor blanket.** Jassby, D.L. (Princeton Plasma Physics Laboratory, Princeton, NJ). *Journal of Fusion Energy;* **5**: No. 3, 245-246(Sep 1986).

This note estimates the minimum annual demand for fissile fuel of a system of naval reactors and the required capacity of a fusion neutron source that could supply the fuel by breeding in a thorium-containing blanket.

22027 **Lithium nitrate as a fusion reactor coolout fluid? A thermochemical assessment.** Adamson, M.G.; Calef, D.; Moir, R.W. (Lawrence Livermore National Laboratory, Livermore, CA). *Journal of Fusion Energy;* **5**: No. 3, 247-252(Sep 1986).

In connection with possible application as a coolant fluid in fusion reactors, molten $LiNO_3$ and $LiNO_3/LiNO_2$ mixtures, and their mixtures with Na/K nitrates, have been evaluated with respect to their high temperature stability, their ability to reversibly dissolve and release tritium and, in a very limited sense, their corrosiveness toward structural alloys. The results of the primarily thermochemical evaluation indicate that with respect to thermal/radiolytic decomposition and corrosivity $LiNO_3/LiNO_2$ may be suitable

for application up to about 700 degrees K; however, with respect to reversibility/irreversibility of tritium release, it appears unsuitable a all likely operating temperatures ( about 675-800 degrees K).

22028 **Some thoughts on the production of muons for fusion catalysis.** Chapline, G.; Moir, R. (Lawrence Livermore National Laboratory, Livermore, CA). *Journal of Fusion Energy;* **5**: No. 3, 191-200(Sep 1986).

For muon-catalyzed fusion to be of practical interest, a very efficient means of producing muons must be found. We describe here some schemes for producing muons that may be more energy efficient than any heretofore proposed. There are, in particular, some potential advantages of creating muons from collisions of high-energy tritons confined in a magnetic mirror configuration. If one could catalyze 200 fusions per muon and employ a uranium blanket that would multiply the neutron energy by a factor of ten, one might produce electricity with an overall plant efficiency (ratio of electric energy produced to nuclear energy released) approaching 30%.

22029 **Fusion-neutron production in the TFTR with deuterium neutral-beam injection.** Hendel, H.W.; England, A.C.; Josshy, D.L.; Mirin, A.A.; Nieschmidt, E.B. (RCA David Sarnoff Research Center, Princeton, NJ). *Journal of Fusion Energy;* **5**: No. 3, 231-244(Sep 1986).

We report measurements of the fusion reaction rate in the Tokamak Fusion Test Reactor (TFTR) covering a wide range of plasma conditions and injected neutral-beam powers up to 6.3 MW. The fusion neutron production rate in beam-injected plasmas decreases slightly with increasing plasma density n /SUB e/ , even though the energy confinement parameter n /SUB e/ t /SUB e/ generally increases with density. The measurements indicate and Fokker-Planck simulations show that with increasing density the source of fusion neutrons evolves from mainly beam-beam and beam-target reactions at very low n /SUB e/ to a combination of beam-target and thermonuclear reactions at high n /SUB e/ . At a given plasma current, the reduction in neutron source strength at higher n /SUB e/ is due to both a decrease in electron temperature and in beam-beam reaction rate. The Fokker-Planck simulations also show that at low n /SUB e/ , plasma rotation can appreciably reduce the beam-target reaction rate for experiments with coinjection only. The variation of neutron source strength with plasma and beam parameters is as expected for beam-dominated regimes. However, the Fokker-Planck simulations systematically overestimates the measured source strength by a factor of 2-3; the source of this discrepancy has not yet been identified.

22030 **Lithium plasma generation for PBFA-II ion diodes.** Rice, J.K.; Gerber, R.A.; Tisone, G.C. (Sandia National Laboratories, Albuquerque, NM). *AIP (American Institute of Physics) Conference Proceedings;* **146**: No. 1, 654-657(15 Aug 1986). (CONF-851185—). Contract AC04-76DP00789.

From International laser science conference; Dallas, TX, USA (18 Nov 1985).

The selection of lithium as the ion for PBFA II has made the development of a suitable lithium ion source one of the highest priority areas in the light-ion fusion program. Several schemes for producing lithium ions in a suitable diode configuration are being actively pursued. One attractive option is to use the LIBORS laser ionization technique on a thin layer of lithium vapor near the anode. A space- and time-dependent model of this process has been developed to guide system design studies, and experiments are being performed to validate model predictions.

22031 **Inertial confinement fusion with light ion beams.** VanDevender, J.P.; Cook, D.L. (Sandia National Labs., Albuquerque, NM). *Science (Washington, D.C.);* **232**: 831-836(16 May 1986). Contract AC04-76DP00789.

The Particle Beam Fusion Accelerator II (PBFA II) is presently under construction and is the only existing facility with the potential of igniting thermonuclear fuel in the laboratory. The accelerator will generate up to 5 megamperes of lithium ions at 30 million electron volts and will focus them onto an inertial confinement fusion (ICF) target after beam production and focusing have been optimized. Since its inception, the light ion approach to ICF has been considered the one that combines low cost, high risk, and high payoff. The beams are of such high density that their self-generated electric and magnetic fields were thought to prohibit high focal intensities. Recent advances in beam production and focusing demonstrate that these self-forces can be controlled to the degree required for ignition, break-even, and high gain experiments. ICF has been pursued primarily for its potential military applications. However, the high efficiency and cost-effectiveness of the light ion approach enhance its potential for commercial energy application as well.

22032 **Heavy ion inertial fusion.** Reiser, M.; Godlove, T.; Bangerter, R. (eds.). New York, NY; American Institute of Physics (1986). 634p. (CONF-860510—). American Institute of Physics, 335 E. 45th St., New York, NY 10017. File Number TI87005365.

From Symposium on heavy ion inertial fusion; Washington, DC, USA (27 May 1986).

Separate abstracts for each included paper have been entered into the data base. (MOW)

22033 **Search for lower hybrid drift fluctuations in a field-reversed configuration by means of carbon dioxide heterodyne scattering.** Carlson, A.W. Seattle, WA; Univ. of Washington (1986). 143p. University Microfilms Order No. 86-26,633.

Thesis (Ph. D.).

A measurement reported sets an upper bound on LHD like density fluctuations in an FRC, which is two orders of magnitude below the predicted levels. Particle loss from FRC's is known to occur anomalously fast, and this is usually attributed to effects of the LHD instability. If LHD waves are present, they can be measured using heterodyne detection of $CO_2$ laser light scattered from the associated density fluctuations. In this study the usual scattering system was successfully modified to compensate for severe refraction of the beams by the plasma. This system was calibrated by detection of an electrooptically modulated $CO_2$ laser beam, and by detection of light scattered from acoustic waves in salt. The plasma measurements made on the TRX-2 field reversed theta pinch covered all parameters at which LHD fluctuations might be expected to occur, namely wavenumbers from 30 to 240 $cm^{-1}$, frequencies from 10 to 300 MHz, and radii from one centimeter inside the separatrix to two centimeters outside. The lack of detectable scattered light under any of these conditions indicates $(\delta n/n) < 1 \times 10^{-4}$, compared to predictions of $(\delta n/n) \sim 1 \times 10^{-2}$ based on mode coupling theory, ion-trapping theory, and observed transport rates. Several mechanisms are discussed that may stabilize LHD in these plasmas. Several alternate explanations of the observed anomalous transport rates in FRC's are also discussed.

22034 **Summary abstract: fabrication of Rayleigh-Taylor instability experiment.** Hsieh, E.J.; Hatcher, C.W.; Miller, D.E. (Lawrence Livermore Lab., CA). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* **3**: No. 3, 1278-1279(May-Jun 1985). Contract W-7405-ENG-48.

Because of the concern for growth of Rayleigh-Taylor (RT) instabilities, surfaces of targets for implosion experiments must be exceptionally smooth. The 100 A surface smoothness requirement could be conservative, expensive insurance against RT instabilities. Will instabilities grow at 500 or 1000 A surface smoothness? What are the approaches to minimize the RT instability effects? The present RT experiments are designed to answer some of these questions. The authors approach to the problem has been to fabricate planar targets with known defects so that their performance can be compared with theoretical predictions. Since it is difficult to make theoretical calculations for a point defect, their RT experiments are designed to test continuous, single-frequency sinusoidal defects of various wavelengths and peak-to-valley heights.

22035 **Laser and plasma technology.** Lee, S.; Tan, B.C.; Wong, C.S.; Chew, A.C. Singapore, Singapore; World Scientific Publishing Co. Pte Ltd. (1985). 690p. (CONF-8312137—). World Scientific Publishing Co. Pte Ltd., 9 Kaki Bukit Rd., 2 Gordon Warehouse 03-01, Singapore, Singapore 1441 SG.

From 1. tropical college on applied physics; Kuala Lumpur, Malaysia (26 Dec 1983).

This book presents the papers given at a conference on laser and plasma technology. Topics considered at the conference included: experiments on plasma focus, glow discharge and the collinear dye laser; basic theory and methods of laser technology; technology of solid state lasers; and basic theory and methods of plasma technology.

22036 **$H^-$ production in a multicusp microwave plasma.** Trow, J.R. Berkeley, CA; Univ. of California (1985). 219p. University Microfilms Order No. 85-25,140.

Thesis (Ph. D.).

High energy neutral beams are necessary for the continued development of magnetically confined fusion plasma devices. Neutral beams based on positive ions are not efficient at beam energies of 100 keV or above; however, negative ion based neutral beam systems are efficient, even at high beam energies. Volume production of $H^-$ has many advantages over the other methods, chiefly: simplicity of design and operation, and no need for alkali metals. Since volume production requires a low electron temperature, but also requires molecular intermediates only formed by more energetic electrons (>20 eV), double plasma devices with a separate hot electron region are desirable. Therefore, an experiment was undertaken to examine $H^-$ production by volume processes in a multicusp microwave discharge, part of the cusp field being enhanced to produce an ECR (electron cyclotron resonance), that would also isolate the hotter plasma formed there. This arrangement is analogous to the magnetic filters used in some other negative ion sources. This work describes the experiment setup and the results obtained, which are a survey of the behavior of this type of device. Also included is a discussion of the volume processes associated with $H^-$ production, including numerical estimates, based on the experimental measurements.

22037 **Physics of plasma-wall interactions in controlled fusion.** Post, D.E.; Behrisch, R. New York, NY; Plenum Press (1984). 1183p. (CONF-8407172—).

From NATO advanced study institute on physics of plasma-wall interactions in controlled fusion; Val-Morin, Quebec, Canada (30 Jul 1984).

In the areas of plasma physics, atomic physics, surface physics, bulk material properties and fusion experiments and theory, the following topics are presented: the plasma sheath; plasma flow in the sheath and presheath of a scrape-off layer; probes for plasma edge diagnostics in magnetic confinement fusion devices; atomic and molecular collisions in the plasma boundary; physical sputtering of solids at ion bombardment; chemical sputtering and radiation enhanced sublimation of carbon; ion backscattering from solid surfaces; implantation, retention and release of hydrogen isotopes; surface erosion by electrical arcs; electron emission from solid surfaces;l properties of materials; plasma transport near material boundaries; plasma models for impurity control experiments; neutral particle transport; particle confinement and control in existing tokamaks; limiters and divertor plates; advanced limiters; divertor tokamak experiments; plasma wall interactions in heated plasmas; plasma-wall interactions in tandem mirror machines; and impurity control systems for reactor experiments.

22038 **Introduction to the physics of plasma wall interactions in controlled fusion.** Post, D.E.; Behrisch, R.; Stansfield, B. (Plasma Physics Laboratory, Princeton University Princeton, NJ). pp 1-14 of Physics of plasma-wall interactions in controlled fusion. Post, D.E.; Behrisch, R. New York, NY; Plenum Press (1984). (CONF-8407172—).

From NATO advanced study institute on physics of plasma-wall interactions in controlled fusion; Val-Morin, Quebec, Canada (30 Jul 1984).

This paper begins by addressing the major physics questions of confinement, beta ratio, heating and current drive, and impurity and particle control necessary to the realization of controlled fusion, and then reviews the current tokamak data base and the operating projections for the current tokamak projects. The paper concludes by classifying the lectures presented at the conference according to subject.

22039 **Properties of materials.** Smith, M.F.; Whitley, J.B. (Sandia National Labs., Albuquerquem, nm). pp 539-605 of Physics of plasma-wall interactions in controlled fusions. Post, D.E.; Behrisch, R. New York, NY; Plenum Press (1984). (CONF-8407172—).

From NATO advanced study institute on physics of plasma-wall interactions in controlled fusion; Val-Morin, Quebec, Canada (30 Jul 1984).

This paper describes the major differences in the basic structures of metals, ceramics, and graphites. The physical properties which strongly influence materials performance in a fusion plasma environment are discussed. The response of materials to severe thermal loads that can be imposed by contract with a plasma are examined. Several figures-of-merit and materials comparisons are presented relating to thermal stress. The effects of radiation on materials are examined.

22040 **Particle confinement and control in existing tokamaks.** Cohen, S.A. (Plasma Physics Lab., Princeton, Univ., NJ). pp 773-853 of Physics of plasma-wall interactions in controlled fusions. Post, D.E.; Behrisch, R. New York, NY; Plenum Press (1984). (CONF-8407172—).

From NATO advanced study institute on physics of plasma-wall interactions in controlled fusion; Val-Morin, Quebec, Canada (30 Jul 1984).

This paper reviews measurements of particle losses relevant to plasmawall interactions in tokamaks. The methods commonly used to measure the confinement and loss of thermal plasma, impurity ions, suprathermal electrons and ions, and photons are compared and evaluated. Refueling and particle control techniques, including pulsed gas and pellet injection and gettering and discharge cleaning, are described.

22041 **Plasma-wall interactions in tandem mirror machines.** Allen, S.L. (Lawrence Livermore National Lab Univ. of California, Livermore, CA). pp 1067-1099 of Physics of plasma-wall interactions in controlled fusion. Post, D.E.; Behrisch, R. New York, NY; Plenum Press (1984). (CONF-8407172—).

From NATO advanced study institute on physics of plasma-wall interactions in controlled fusion; Val-Morin, Quebec, Canada (30 Jul 1984).

This paper describes the plasma-surface interactions in thermalbarrier tandem-mirror machines. The thermal-barrier mode of axial confinement is an integral part of a tandem mirror, and it dictates the required plasma conditions, particularly on the surface of the plasma. A brief description is given of the experimental configuration used in tandem mirrors to create the thermal barrier. The TMX-U and MFTF-B machines are used as specific examples. Relevant plasmasurface interaction issues are addressed, and the experimental results from currently operating tandem mirror machines are included. A summary and discussion of future work concerned with plasma-surface interactions in tandem mirrors are presented.

22042 **Impurity control system for reactor experiments.** Post, D.E.; Matlas, R.F. (Princeton Univ., Princeton, NJ). pp 1101-1147 of Physics of plasma-wall interactions in controlled fusion. Post, D.E.; Behrisch, R. New York, NY; Plenum Press (1984). (CONF-8407172—).

From NATO advanced study institute on physics of plasma-wall interactions in controlled fusion; Val-Morin, Quebec, Canada (30 Jul 1984).

This paper discusses the requirements that an impurity and particle control system must meet. The general plasma physics issues relevant to impurity control and the issues for pumped limiters and poloidal divertors are discussed. The physics of the operation of the "open" divertors described are addressed. Materials issues are summarized and design considerations are described. Examples drawn from the INTOR design studies are used as illustrations. These examples make the relevant points more specific.

22043 **Limiters and divertor plates.** Ulrickson, M. (Princeton Univ, Princeton, NJ). pp 855-890 of Physics of plasma-wall interactions in controlled fusions. Post, D.E.; Behrisch, R. New York, NY; Plenum Press (1984). (CONF-8407172—).

From NATO advanced study institute on physics of plasma-wall interactions in controlled fusion; Val-Morin, Quebec, Canada (30 Jul 1984).

This paper presents the basic physical principles that are important for the design of limiters and divertor plates. The methods used to find a solution within the constraints are described. The author shows how all of the individual effects interact to lead to a design. Some remarks concerning how the designed components are conditioned for optimum performance are presented.

22044 **Advanced limiters.** Mioduszewski, P. (Oak Ridge National Lab., Oak Ridge, TN). pp 891-929 of Physics of plasma-wall interactions in controlled Fusion. Post, D.E.; Behrisch, R. New York, NY; Plenum Press (1984). (CONF-8407172—).

From NATO advanced study institute on physics of plasma-wall interactions in controlled fusion; Val-Morin, Quebec, Canada (30 Jul 1984).

This paper provides a synopsis of major concepts of mechanical pump limiters and magnetic ergodic limiters/divertors. The principles of pump limiter operation and pump limiter design are discussed. Particle exhaust and pumping considerations are reviewed. The authors note that for impurity control, pump limiters seem to be inferior to magnetic divertors. The impurities originated at the limiter itself are examined. The authors examine prospects for fusion reactor applications in which pump limiters or divertors would fulfill heat removal, density control, helium ash removal, and impurity control tasks.

# 99 GENERAL AND MISCELLANEOUS

22045 **(DOE/MA—0288) Listing of awardee names: Inactive awards as of January 29, 1987.** (USDOE Assistant Secretary for Management and Administration, Washington, DC. Procurement and Assistance Management Directorate). 29 Jan 1987. 483p. NTIS, PC A21/MF A01; 1; GPO Dep. File Number DE87005444.

This is a computerized listing issued quarterly from the Procurement and Assistance Data System (PADS), including an alphabetical listing of all acquisition and financial assistance awards (excluding purchase orders) with the Department of Energy. Inactive is defined as the completion date of the award is earlier (in the past) than the date of the issuance of the listing.

22046 **(DOE/METC—87/6074) Morgantown Energy Technology Center: Publications list, FY 86.** Sink, C.H.; Pasini, S.E. (USDOE Morgantown Energy Technology Center, WV). Dec 1986. 132p. NTIS, PC A07/MF A01; GPO Dep. File Number DE87001020.

This Publications List includes the scientific and technical documents, papers, and presentations authored by the Morgantown Energy Technology Center (METC) staff as well as those written by METC contractors during Fiscal Year 1986. The documents, papers, and presentations are arranged by METC areas of expertise: Arctic and Offshore; Components; Computers, Modeling, and Simulation; Enhanced Oil Recovery; Environment; Fluidized-Bed Combustion; Fuel Cells; Gas Stream Cleanup; Gasification; Heat Engines; Instrumentation and Control; Low-Rank Coal; Oil Shale; Tar Sands; Unconventional Gas Recovery; Underground Coal Gasification; and Crosscutting Technologies. The reports are subarranged by identification numbers from the Energy Data Base. Author/corporate author, report number, and title indexes follow.

22047 **Normal accidents.** Perrow, C. New York, NY; Basic Books (1984). 386p.

From review by Larry Hirschhorn, Univ. of Pennsylvania, in Science, Vol. 228 (17 May 1985).

The book Normal Accidents, by Charles Perrow is reviewed. The book examines the ways in which complex technological systems fail and argues that people are intrinsically unable to build, manage and maintain modern technologies. Accidents in several different types of activities are examined in detail as support for this conclusion. The reviewer disagrees with Mr. Perrow's conclusion.

## 9901 Management

*REFER ALSO TO CITATION(S) 20820*

22048 **(INIS-mf—10495-Vols.1-2) Feasibility study for the Nuclear Research Centre of the Nuclear Energy Commission.** (Comision Nacional de Energia Atomica, Montevideo (Uruguay)). 1985. 488p. (In Spanish). NTIS (US Sales Only), PC A21/MF A01. File Number DE87701491.

The feasibility study was carried out in order to evaluate the possibility of building a Nuclear Research Centre in Uruguay, which would support a wide range of nuclear related technological activities. A market research was carried out, of the products to be manufactured at the Nuclear Centre, regarding the size of production. A detailed list of the main products considered is enclosed. The siting study was performed through the analysis of the incidental factors, such as environment, technical scope and socio-ecomonic factors. An engineering study for the main installations was done. The investment and financial sources were also studied.

22049 (INIS-mf—10574, pp 13-17) **Activities of consultancy centre for ionizing radiation applications.** Teply, J.; Bartonicek, B. (Ustav Jaderneho Vyzkumu CSKAE, Rez, Czechoslovakia). 1985. (In Czech). NTIS (US Sales Only), PC A05/MF A01. File Number DE87701448. (CONF-8506335—Pt.4).

From Scientific and technical conference on the occasion of the 30th anniversary of the Czechoslovak Nuclear Research Institute; Rez, Czechoslovakia (6 Jun 1985).

The consultancy centre for ionizing radiation applications has been established within the radiation chemistry department at the Nuclear Research Institute at Rez. It is equipped with two well-type /sup 60/Co gamma irradiation devices of an activity of about 300 and 280 TBq, an electron accelerator for pulse radiolysis, and an accelerator for technological irradiation (3 MeV/1.2 kW), both products by Tesla. The centre provides irradiation services, chemical and technical expertise and is involved in the solution of research problems, this independently or in cooperation with other institutions.

22050 **(IPPJ-DT—117) Development of retrieval, reservation and management system for measuring instruments.** (Nagoya Univ. (Japan). Inst. of Plasma Physics). Aug 1985. 41p. (In Japanese). NTIS (US Sales Only), PC A03/MF A01. File Number DE87700959.

In order to computerize the lending and management of measuring instruments, at first, the specification of the software was examined, but thereafter, the development was begun. The largest aim of the computerization was the automation and labor saving of the lending works of diverse measuring instruments and the automatic management. From user side, it is desirable to know the specification and the state of use and reservation of measuring instruments and to be able to easily make reservation based on the information. Besides, from management side, it is desirable to know the location and the state of use and reservation of measuring instruments, to immediately prepare for lending and returning, and to automate the recording of lending and returning. So as to satisfy those conditions, the automatic reservation and management system for measuring instruments was developed. At the same time, the means to simply input required data such as specification, names of manufacturers and equipment number was developed. The input of data was carried out for three months from October, 1984, and the system was almost completed in December, 1984. The full scale operation was started in January, 1985. (Kako, I.).

22051 **(PPA-T—20) Secondary Standard Dosimetry Laboratory (SSDL).** (Unit Tenaga Nuklear, Bangi, Selangor (Malaysia)). 1983. 23p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701492.

A secondary Standard Dosimetry Laboratory has been established in the Tun Ismail Research Centre, Malaysia as a national laboratory for reference and standardization purposes in the field of radiation dosimetry. This article gives brief accounts on the general information, development of the facility, programmes to be carried out as well as other information on the relevant aspects of the secondary standard dosimetry laboratory.

## 9902 Mathematics And Computers

*REFER ALSO TO CITATION(S) 20328, 20329, 20330, 20374, 20404, 21200*

22052 **(AD-A—175121/3/XAB) Sparse elimination on vector multiprocessors. Interim report, 1 May 1985-30 April 1986.** Calahan, D.A. (Michigan Univ., Ann Arbor (USA). Dept. of Electrical Engineering and Computer Science). 15 Apr 1986. 7p. NTIS, PC A02/MF A01.

The availability of instruction-level simulators for the CRAY X-MP and the CRAY-2, together with early access to the MFECC and NAS CRAY-2s, has made possible the study of a variety of equation-solving issues for many-processor VMP configurations. These include: (1) the development of equation-solving algorithms on the CRAY-2, and; (2) task granularity studies; and (3) memory conflict studies.

22053 **(AD-A—175148/6/XAB) Design guidelines for a rule-based passive surveillance system. Master's thesis.** Jennings, K.E. (Naval Postgraduate School, Monterey, CA (USA)). Sep 1986. 51p. NTIS, PC A04/MF A01.

This thesis addresses the application of artificial intelligence to passive surveillance systems that use waveform analysis as their primary means of detecting, classifying, and locating a specific target. Discussion is further limited to those passive surveillance systems which must deal with considerable noise in the data. Present methods, which use visual examination of the waveform data for the detection of target waveforms, is complicated, time consuming, and requires considerable expertise. The lack of prior knowledge of the nature of the noise, (e.g., frequency spectra, amplitude, or dynamics), means that the majority of signal analysis must be done by experts. This study discusses and recommends a rule-based system which uses the following artificial-intelligence structures: the blackboard architecture, and the frames data structure. Sources of uncertainty are also discussed and methods of dealing with it are suggested. This study recommends that the symbolic representation language be carefully selected for conciseness, efficiency, and a vocabulary rich enough to express everything desired by the experts. A learning knowledge source is also recommended.

22054 **(AD-A—175239/3/XAB) Development of programming techniques for SIMD computers. Annual progress report No. 2.** Potter, J.L. (Kent State Univ., OH (USA). Dept. of Mathematical Sciences). 15 Oct 1986. 35p. NTIS, PC A03/MF A01.

During the past fiscal year, this research grant helped support activities in four related areas of associative programming: 1) implementation of the ASPROL compiler; 2) implementation of the FIRST, NEXT, PREVIOUS, TRUNC and TRUNCA acode functions and I/O stack routines; 3) implementation of the associative database primitives; and 4) analysis of new network designs for interprocessor communications in associative processors. It is felt that this compiler can be augmented with rule-based constructs that will provide a high performance expert system capability. The ASPROL high-level language developed last year and described in last years report was implemented on the KSU VAX 780 research computer.

22055 **(AD-A—175260/9/XAB) Serial-bus architecture for parallel-processing systems. Master's thesis.** Delaney, K.J. (Naval Postgraduate School, Monterey, CA (USA)). Sep 1986. 64p. NTIS, PC A04/MF A01.

One of the most-serious deterrents to the development of multiple-processor architectures has been the problem of providing adequate communication between the discrete processing elements. This thesis examine two communications-based constraints. The first constraint is related to the physical structure of the VLSI chip. The wider the communication path the more pins are needed to effect the data transfer. As integrated circuits grow in computational power, more communication capacity is needed, pushing designs closer to the pin limitation of the packaging technology. The second constraint, somewhat related to the first, is the limited speed with which data can be transmitted via internal channels. Typical speeds one can achieve on a single wire are on the order of 1 Gbps. The recent development of an optoelectronic multiplexer may allow VLSI chips to communicate at rates up to 7 Gbps. An architecture for a parallel-processing computer that takes advantage of this new capability is presented. The feasibility is presented. The feasibility of a single-chip parallel-processor based on the Optoelectronic Multiplexer is examined by projecting current trends in processor speed, power, and transistor count into estimates of throughput for a multiprocessor IC.

22056 **(ANL/MCS-TM—84) Use of vector and parallel computers in the solution of large, sparse linear equations.** Duff, I.S. (Argonne National Lab., IL (USA). Mathematics and Computer Science Div.). Nov 1986. Contract W-31109-ENG-38. 16p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87006194.

We discuss the direct solution of large, sparse linear equations on vector and parallel computers. To be specific, we examine algorithms based on Gaussian elimination for solving the equation $Ax=b$, when the coefficient matrix A is unsymmetric, large, and sparse. We will look at three classes of algorithms and comment on how effective they are at exploiting vector and parallel architectures. The classes into which we divide our algorithms are general methods, band and frontal techniques, and multifrontal approaches. 32 refs., 2 figs., 5 tabs.

22057 **(ANL/TM—447) Report of the Computer-Aided Engineering Integration Project.** Raffenetti, R.C.; Amber, R.A.; Bertoncini, P.J.; Cook, J.M.; Mandel, J.H.; McMahon, R.J.; Vander Mast, S.K.; Volmer, J.A. (Argonne National Lab., IL (USA)). Feb 1987. Contract W-31109-ENG-38. 40p. NTIS, PC A03/MF A01; GPO Dep. File Number DE87006790.

Goal of this project is to investigate, evaluate, and recommend the networking methods and the data exchange standards by which integration of the Intergraph design equipment and other computer-based Laboratory systems will be achieved. Personal computer-based design systems, computer-integrated manufacturing, engineering analysis, graphics output, electronic publishing, applications data interfaces and data communications options are covered.

22058 **(CONF-870150—1) Alternative knowledge acquisition: Developing a pulse coded neural network.** Dress, W.B. (Oak Ridge National Lab., TN (USA)). Jan 1987. Contract AC05-84OR21400. 12p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87005192.

From Long Island University computer technology symposium; Brookville, NY, USA (23 Jan 1987).

After a Rip-van-Winkle nap of more than 20 years, the ideas of biologically motivated computing are re-emerging. Instrumental to this awakening have been the highly publicized contributions of John Hopfield and major advances in the neurosciences. In 1982, Hopfield showed how a system of maximally coupled neutron-like elements described by a Hamiltonian formalism (a linear, conservative system) could behave in a manner startlingly suggestive of the way humans might go about solving problems and retrieving memories. Continuing advances in the neurosciences are providing a coherent basis in suggesting how nature's neurons might function. A particular model is described for an artificial neural system designed to interact with (learn from and manipulate) a simulated (or real) environment. The model is based on early work by Iben Browning. The Browning model, designed to investigate computer-based intelligence, contains a particular simplification based on observations of frequency coding of information in the brain and information flow from receptors to the brain and back to effectors. The ability to act on and react to the environment was seen as an important principle, leading to self-organization of the system.

**22059 (FNAL-TM—1427) Review of the status of the FASTBUS standard routine specification.** Pordes, R. (Fermi National Accelerator Lab., Batavia, IL (USA)). Nov 1986. Contract AC02-76CH03000. 9p. (CONF-861007—24). NTIS, PC A02/MF A01; GPO Dep. File Number DE87004228.

From Nuclear science and nuclear power systems symposium; Washington, DC, USA (29 Oct 1986).

Within the next few months the FASTBUS Software Working group hopes to distribute the Specification for Standard Routines for FASTBUS. The draft specification will go to the members of the overseeing NIM committee for review. This paper presents the current status of the specification. It includes a list of the goals of the specification; some details of the concepts embedded in it; as well as an overview of the software implementations of the previously distributed draft versions of the specification.

**22060 (IAE—1971/E-3/R/B) One-dimensional SNAIL computer code for the reactor rigs and other multilaminar cylindrical systems heat analysis.** (Institute of Atomic Energy, Otwock-Swierk (Poland)). 1983. 40p. (In Polish). Power System Computer Centre. Mining and Power System Information Department, Palace of Culture and Science, PL-00-901 Warsaw, Poland.

FORTRAN EXTENDED for CYBER 73.

The suitability is presented of the one-dimensional heat transfer model in reactor rigs heat computations. The structure and functioning of the SNAIL program which realizes such a model are discussed. The results of experimental verification of the code are presented. The program is comparatively universal - it can be used for heat computations of all the multilaminar cylindrical geometry systems which fulfill the assumptions made in the paper. The most essential feature of the code is that it effectively considers thermal dilatations of each layer.

**22061 (IFVE-OMVT—85-118) REDUCE program for the calculation of the geometrical characteristics of compactified multidimensional Riemannian space.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1985. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87700899.

Submitted to the journal Comp. Phys. Comm. .

The REDUCE program for calculation of the connection, curvature, Ricci tensor etc. for the group quotient space is described. The knowledge of these quantities is necessary for creation of unified models of fundamental interactions in the framework of multidimensional generally covariant field theories. 12 refs.; 1 tab.

**22062 (INP—1228/AP) BALTORO a general purpose code for coupling discrete ordinates and Monte-Carlo radiation transport calculations.** (Institute of Nuclear Physics, Krakow (Poland)). 1983. 81p. NTIS (US Sales Only), PC A05/MF A01. File Number DE87701490.

CDC computer 6600(7600), FORTRAN.

The general purpose code BALTORO was written for coupling the three-dimensional Monte-Carlo /MC/ with the one-dimensional Discrete Ordinates /DO/ radiation transport calculations. The quantity of a radiation-induced /neutrons or gamma-rays/ nuclear effect or the score from a radiation-yielding nuclear effect can be analysed in this way.

**22063 (INR—1960/9/R/B) Modification of the TESP code system: application of the deformed quadrangle mesh.** (Institute of Nuclear Research, Warsaw (Poland)). 1983. 20p. (In Polish). Power System Computer Centre. Mining and Power System Information Department, Palace of Culture and Science, PL-00-901 Warsaw, Poland.

FORTRAN EXT/CDC-CYBER 72.

Some alterations to the TESP programme system are presented. These alterations enable calculation of the temperature and stress distribution in the areas where the boundaries and the material separation lines consist of segments and arcs of circle.

**22064 (JAERI—1301) THIDA-2: an advanced code system for calculation of transmutation, activation, decay heat and dose rate.** (Japan Atomic Energy Research Inst., Tokyo). Mar 1986. 123p. NTIS (US Sales Only), PC A06/MF A01. File Number DE87701000.

In a D-T burning fusion reactor, the radioactivity induced by the 14 MeV neutrons causes many problems. It limits personnel access to the reactor during shutdown, generates decay heat and produces radwastes. A code system THIDA had been developed in 1978 to calculate the radioactivity and dose rate around a fusion device. The THIDA system consisted of the followings: one- and two-dimensional discrete ordinates radiation transport codes; induced activity calculation code; three libraries for transmutation and decay chain data, transmutation cross sections and delayed gamma-ray emission data. The present report gives a complete description of THIDA-2, a new advanced version of the THIDA system which has the following major improvements: 1. Capability to treat three-dimensional calculation models by the use of a Monte Carlo transport code. 2. Accurate decay heat calculation following the transport of delayed gamma rays. 3. Simplification of the data input process by the use of free format scheme and closer coupling between the radiation transport codes and the induced activity calculation code. 4. Self-descriptive output format and additional plotter output. 5. Capability to calculate problems requiring larger core memory by the use of variable dimension.

**22065 (JAERI-M—86-010) Function and organization of CPC database system.** (Japan Atomic Energy Research Inst., Tokyo). Feb 1986. 112p. (In Japanese). NTIS (US Sales Only), PC A06/MF A01. File Number DE87701022.

It is very time-consuming and expensive work to develop computer programs. Therefore, it is desirable to effectively use the existing program. For this purpose, it is required for researchers and technical staffs to obtain the relevant informations easily. CPC (Computer Physics Communications) is a journal published to facilitate the exchange of physics programs and of the relevant information about the use of computers in the physics community. There are about 1300 CPC programs in JAERI computing center, and the number of programs is increasing. A new database system (CPC database) has been developed to manage the CPC programs and their information. Users obtain information about all the programs stored in the CPC database. Also users can find and copy the necessary program by inputting the program name, the catalogue number and the volume number. In this system, each operation is done by menu selection. Every CPC program is compressed and stored in the database; the required storage size is one third of the non-compressed format. Programs unused for a long time are moved to magnetic tape. The present report describes the CPC database system and the procedures for its use.

**22066 (LA—10883-MS) FORTRAN compiler performance benchmarks for the IBM personal computer.** Ballmann, J.S.; Wilkerson, J.F. (Los Alamos National Lab., NM (USA)). Feb 1987. Contract W-7405-ENG-36. 29p. NTIS, PC A03/MF A01; GPO Dep. File Number DE87006319.

The relative performance of various FORTRAN compilers has been measured. The AT and XT models of the IBM peronal computer using the PCDOS operating system were used to evaluate three currently available compilers. Results are summarized and the characteristics of each compiler are presented. 11 refs.

**22067 (LA-UR—86-4336) Implementing remote procedure calls with DECnet.** Bjorklund, E.; Schaller, S.C. (Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 17p. (CONF-870471—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE87003754.

From DECUS spring meeting; Nashville, TN, USA (27 Apr 1987).

The "Remote Procedure Call" (RPC) has recently become an important communication model for distributed systems. The basic idea behind remote procedure calls is that a process running on one machine can "call", using standard procedure calling semantics, another routine that executes on a different machine. A message-passing mechanism is used to transfer parameters between the caller and the called routine. In this paper, we describe a remote

procedure call system we have implemented that uses DECnet as the underlying message-passing mechanism. Our system is highly reliable, reasonalbly efficient, and supports some advanced features such as asynchronous remote procedures. The described system is currently part of a distributed accelerator-control system containing VMS, Micro-VMS, and VAXELN nodes. It could also be extended to any other system that supports DECnet. Topics discussed include the system design, parameter-passing protocol, error detection and recovery, and performance.

22068 **(LA-UR—87-140) Nonlinear response matrix methods for radiative transfer.** Miller, W.F. Jr.; Lewis, E.E. (Los Alamos National Lab., NM (USA); Northwestern Univ., Evanston, IL (USA)). 1987. Contract W-7405-ENG-36. 16p. (CONF-870424—6). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87005106.

From American Nuclear Society international meeting on advances in reactor physics, mathematics and computation; Paris, France (27 Apr 1987).

A nonlinear response matrix formalism is presented for the solution of time-dependent radiative transfer problems. The essential feature of the method is that within each computational cell the temperature is calculated in response to the incoming photons from all frequency groups. Thus the updating of the temperature distribution is placed within the iterative solution of the spaceangle transport problem, instead of being placed outside of it. The method is formulated for both grey and multifrequency problems and applied in slab geometry. The method is compared to the more conventional source iteration technique. 7 refs., 1 fig., 4 tabs.

22069 **(M—194) Writing Basis packages.** Dubois, P.F. (Lawrence Livermore National Lab., CA (USA)). 18 Nov 1986. Contract W-7405-ENG-48. 39p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87006827.

The Basis Language is the user interface for programs using the Basis system. This language is a fully featured programming language with the additional property that the variables in the common blocks of the physics packages are accessible and can appear in user statements. Thus, statements of the Basis Language set or display the variables in the physics packages, plot them, save them to files, etc. This manual contains the documentation for the development system.

22070 **(N—87-14247) Techniques to achieve high-speed computations in supercomputers.** Watanabe, T. (National Aerospace Lab., Chofu, Tokyo (Japan)). Nov 1985. vp. (NAL-SP—5). NTIS, PC A12/MF A01.

Various techniques to achieve high-speed computations in supercomputers are described. In particular, architectural approaches to augment concurrency are described. Those approaches include multiprocessors, parallel processors, and pipelined processors. A multiprocessor system is one in which plural processors share the main memory and different programs are executed on each processor. The multiprocessor enhances the system throughput by the concurrent execution of programs. In a parallel processor system, plural processors are connected to each other directly or through a memory unit, and all the processors execute the identical instruction simultaneously under the control of the control unit. In a pipelined processor, instruction execution is streamlined like an assembly line of an automobile factory or the processing procedure in a chemical plant. Next, vector processing for achieving high-speed computations is outlined. Finally, as an example of supercomputers, the vector processing feature of the NEC supercomputer SX system is introduced. The SX system employs multiple-parallel pipelines and 512 way-interleaved memory system to achieve a vector processing speed of 1.3 G flops.

22071 **(ORNL—6362) International symposium on methodologies for intelligent systems: Colloquia program: Proceedings.** Zemankova, M.; Emrich, M.L. (eds.). (Tennessee Univ., Knoxville (USA); Oak Ridge National Lab., TN (USA); Martin Marietta Energy Systems, Inc., Oak Ridge, TN (USA); North Carolina Univ., Charlotte (USA); Procter and Gamble Co., Cincinnati, OH (USA); Association for Computing Machinery, New York (USA). Special Interest Group on Artificial Intelligence). Jan 1987. Contract AC05-84OR21400. 163p. (CONF-8610193—). NTIS MF A01; 2; GPO Dep. File Number DE87006025.

From International colloquia on methodologies for intelligent systems; Knoxville, TN, USA (25 Oct 1986).

Individual papers have been cataloged separately. (WRF)

22072 **(PB—87-124400/XAB) Scientific data manipulation in a relational data-base system.** Read, B.J. (Rutherford Appleton Lab., Chilton (UK)). Jul 1986. 10p. (RAL—86-084). NTIS, PC PC E03/MF E03.

Provided the user interface is well designed, extended relational algebra can be a powerful tool for handling scientific data. Its utility is greatly enhanced by the addition of attribute algebra to allow mathematical manipulation of field values. The paper reports on a development which, motivated by practical requirements, integrates features such as functions, vector data types, iteration, and conditional-attribute values into a relational data-base management system.

22073 **(SAND—86-2453) Elements of a proposed security methodology for networks of computers.** Pierson, L.G.; Witzke, E.L. (Sandia National Labs., Albuquerque, NM (USA)). Oct 1986. Contract AC04-76DP00789. 13p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006769.

In this document we describe the components or elements of a proposed security methodology for networks of computers. This general security methodology separates the "security life" of a computer network into two phases; the design, review, and accreditation phase, and the operational phase. The first phase deals with system security planning, implementation, certification, and accreditation for operation. The second phase deals with the processing of unusual events which may be of security interest during the operation of a computer network. The unusual events are processed through a series of "filters" to determine if the event is associated with a loss or unauthorized activity. Detection and processing of certain kinds of unusual events may cause the update and review of the elements in the first phase (design, review, and accreditation).

22074 **(SLAC-PUB—4148) Networking through the new phone system: The future of telecommunications.** Struven, W. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Dec 1986. Contract AC03-76SF00515. 9p. (CONF-870249—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE87004558.

From Computing high energy physics; Pacific Grove, CA, USA (2 Feb 1987).

The history of the telephone system is traced from 1850 to present, and the "new" telephone companies are described. The immediate problems of 56 KB data and 64 KB voice channels are discussed together with their proposed solution. The Integrated Digital System Network concept (IDSN) is described, and the proposals to build a true end-to-end digital telephone network are described. The Stanford University-Northern Telecom information test facility is described. The current and planned networks in the US and around the world have also been included.

22075 **(UCID—20709) New Application Language Committee: Final report.** Blair, G.J.; Chase, L.; Cook, L.M.; Moura, J.E. (Lawrence Livermore National Lab., CA (USA)). Oct 1986. Contract W-7405-ENG-48. 131p. NTIS, PC A07. File Number DE87005929.

A modern language can revolutionize programming at the Laboratory. The New Applications Language Committee recommends that the Laboratory complete the language study and selection, begin aggressive education and training in modern languages, acquire Ada compilers to encourage experimentation, monitor and

influence the standardization and revision of Ada and Fortran 8X, and implement the selected language. This report discusses the strengths of Ada, problem areas for scientific application, and mixed language issues. It also documents for future reference learning experiences with the Ada Language.

22076 **Bifurcated method and apparatus for floating point addition with decreased latency time.** Farmwald, P.M. (to Dept. of Energy, Washington, DC). US Patent 4,639,887. 27 Jan 1987. Filed date 24 Feb 1984. vp.

This patent describes a method for performing floating point addition of a pair of floating point binary numbers each expressed as a mantissa and an exponent. The method comprises the steps of alignment of the mantissas, addition of the aligned mantissas and postnormalization of the mantissa of the sum. The improvement described here comprises: comparing the exponents of the two floating point numbers prior to the alignment step; simultaneously performing two separate calculations along first and second separate parallel paths as follows: calculating a first sum in the first path as if the difference of the exponents is either 0 or 1, including performing the alignment step by at most a one place right shift of one mantissa; simultaneously calculating a second sum in the second path as if the difference of the exponents is greater than 1, including performing the postnormalization step by at most a one place shift of the mantissa of the second sum; selecting between the first sum and the second sum after simultaneously performing the two calculations.

22077 **Perspectives on artificial intelligence programming.** Bobrow, D.G.; Stefik, M.J. (Xerox Palo Alto Research Center, CA). *Science (Washington, D.C.);* **231**: 951-956(28 Feb 1986).

Programs are judged not only by whether they faithfully carry out the intended processing but also by whether they are understandable and easily changed. Programming systems for artificial intelligence applications use specialized languages, environments, and knowledge-based tools to reduce the complexity of the programming task. Language styles based on procedures, objects, logic, rules, and constraints reflect different models for organizing programs and facilitate program evolution and understandability. To make programming easier, multiple styles can be integrated as sublanguages in a programming environment. Programming environments, provide tools that analyze programs and create informative displays of their structure. Programs can be modified by direct interaction with these displays. These tools and languages are helping computer scientists to regain a sense of control over systems that have become increasingly complex. 36 references, 3 figures.

22078 **Knowledge-based systems.** Davis, R. (Massachusetts Institute of Technology, Cambridge). *Science (Washington, D.C.);* **231**: 957-963(28 Feb 1986).

First developed two decades ago, knowledge-based systems have seen widespread application in recent years. While performance has been a strong focus of attention, building such systems has also expanded the authors conception of a computer program from a black box providing an answer to something capable of explaining its answers, acquiring new knowledge, and transferring knowledge to students. These abilities derive from distinguishing clearly what the program knows from how that knowledge will be used, making it possible to use the same knowledge in different ways. 44 references, 1 figure.

22079 **High performance execution of Prolog programs based on a Static Data Dependency Analysis.** Chang, J.H. Berkeley, CA; Univ. of California (1985). 157p. University Microfilms Order No. 86-09,970.

Thesis (Ph. D.).

Prolog programs are executed from left-to-right and top-to-bottom with backtracking to the most recently activated choicepoint when a failure occurs. This execution strategy is based on a sequential execution model and has been implemented with most efficiency in conventional computer systems. In this thesis, two ways are explored to improve the performance of a Prolog system. The first way is a more intelligent form of backtracking. The second way is to exploit AND-parallel execution. Both intelligent backtracking and AND-parallel execution require information about the dependency between body literals. This information can be derived either at compile time by using a static analysis or at run-time. A methodology for a Static Data Dependency Analysis (SDDA) was developed. The SDDA is based on a worst-case analysis of variable bindings. To perform the SDDA, only one declaration, which describes the worst-case activation, is necessary for each procedure which can be directly invoked from the top level query. A scheme for compiling intelligent backtracking based on the SDDA was designed. To take full advantage of dependency graphs, three different types of backtracking are differentiated. A scheme to exploit AND-parallelism is also proposed. It includes generating parallel executable tasks by the SDDA, using a set of message protocols to coordinate co-operating processes, exploiting both intelligent backtracking and parallel backtracking.

22080 **Design and descriptive tools for systolic architectures.** Lewis, P.S. (Los Alamos National Lab., NM). *Proceedings of the Society of Photo-Optical Instrumentation Engineers;* **495**: 67-74(1984).

From Real time signal processing VII; San Diego, CA, USA (21-22 Aug 1984).

Automated design and descriptive tools are essential for the practical application of highly parallel special-purpose hardware such as systolic arrays. The use of special-purpose hardware can greatly increase the capabilities of signal processing systems. However, the more limited applications base makes design costs a critical factor in determining technical and economic viability. Systolic systems can be described at several levels of abstraction, each of which has unique descriptive requirements. This paper focuses on the descriptive issues involved at the system architectural level. Tools at this level must bridge the gap between logic- and circuit-oriented computer-aided design tools and algorithmic descriptions of systolic architectures. Traditionally, hardware description languages (HDLs) have been used at this level to describe conventional computer architectures. Systolic architectures, however, have different requirements. This paper examines these requirements and develops a set of criteria for evaluating HDLs. Four popular DHLs are evaluated and their strengths and weaknesses noted. The final section of the paper summarizes ongoing efforts at Los Alamos to develop a systolic array HDL based on the CONLAN family of languages. 14 references.

## 9903 Information Handling

*REFER ALSO TO CITATION(S) 21617, 22072*

22081 **(INIS-mf—10551) IAEA data base system for nuclear research reactors (RRDB).** (International Atomic Energy Agency, Vienna (Austria)). Jan 1986. 147p. NTIS (US Sales Only), PC A07/MF A01. File Number DE87700926.

The IAEA Data Base System for Nuclear Research Reactors (RRDB) User's Guide is intended for the user who wishes to understand the concepts and operation of the RRDB system. The RRDB is a computerized system recording administrative, operational and technical data on all the nuclear research reactors currently operating, under construction, planned or shut down in IAEA Member States. The data is received by the IAEA from reactor centres on magnetic tapes or as responses to questionnaires. All the data on research, training, test and radioactive isotope production reactors and critical assemblies is stored on the RRDB system. A full set of RRDB programs (in NATURAL) are contained at the back of this Guide. 11 figs.

## 9905 Civilian Defense

22082 **(ORNL—6252) Civil defense shelters: A state-of-the-art assessment, 1986.** Chester, C.V.; Zimmerman, G.P. (Oak Ridge National Lab., TN (USA)). Feb 1987. Contract AC05-84OR21400. 314p. NTIS, PC A14/MF A01; 1; GPO Dep. File Number DE87006023.

The literature on the design, construction, testing, and cost of blast and fallout shelters was reviewed, and a bibliography of over 1000 documents was assembled. It was found that nuclear

weapon effects and shelter design are well understood. An important barrier to construction of permanent shelters is cost. Single-purpose shelters cost in the high hundreds to low thousands of dollars per occupant (or per space), depending on size, hardness, location, and whether the shelter is part of new construction or retrofit. Multiplied by a risk area population of approximately 160 million, the cost of a blast shelter construction program would rival that of a major strategic weapon system. Options in the mid-range of expense, a few tens to a few hundreds of dollars per space include (1) requiring modified limestone mining practices, where appropriate, to generate usable shelter space near cities; (2) encouraging the construction of earth-sheltered housing and other buildings; and (3) requiring and/or subsidizing the construction of dual-use basement shelter in new construction. A program using this approach would require an annual expenditure of approximately 1% of the annual defense budget for 10 or more years. 950 refs., 68 figs., 9 tabs.

# CORPORATE AUTHOR INDEX

In the Corporate Author Index, report literature is indexed using the name of the organization or institution responsible for issuing the report. Headings are provided for all report literature and for published literature for which a corporate approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate heading gives the document title and the volume and abstract numbers. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German, are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes.

DOE Energy Data Base: Corporate Author Entries (DOE/TIC-4585) is used in the standardization of corporate entries. DOE/TIC-4585 is available for purchase from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22161.

Experimental criticality program to optimize pool storage and transport casks of PWR type fuel assemblies taking into account their burnup. Phase 1: feasibility study, 12:20824 (R;FR;In French)
Operation of the High Flux Reactor. Annual report 1985, 12:20403 (R;XE)
Outline of a numerical method for solving transient equations for multidimensional two-phase flow through a porous medium, 12:20896 (R;FR)
Plasma arc and thermal lance techniques for cutting concrete and steel, 12:20419 (R;FR)
Qualification, training, licensing and retraining of operating shift personnel in nuclear power plants. Presentation of different procedures in the countries of the European Community, Spain, Sweden, Switzerland and the USA, 12:20324 (R;FR)
Ratchetting in the creep range, 12:20362 (R;FR)
Stowing of radioactive materials package during road transport on vehicles of a total weight under 38 tons, 12:20829 (R;FR;In French)
System of large transport containers for waste from dismantling light water and gas-cooled nuclear reactors. Volume 1, 12:20827 (R;FR)
System of large transport containers for waste from dismantling light water and gas-cooled nuclear reactors. Volume 2, 12:20828 (R;FR)
Testing and evaluation of solidified high-level waste forms. Joint annual progress report 1983, 12:20107 (R;FR)
VAK III. Seals and sealing system, 12:20141 (R;FR)
**Commission of the European Communities, Petten (Netherlands). Joint Nuclear Research Center**
Operation of the High Flux Reactor. Annual report 1985, 12:20403 (R;XE)
**Communications Satellite Corp., Clarksburg, MD (USA). COMSAT Labs.**
Design and development of a multi-kilowatt hour hydrogen/nickel oxide battery, 12:20448 (R;US)
**Computational Mechanics Consultants, Knoxville, TN (USA)**
Analysis of boundary conditions for SSME subsonic internal viscous flow analysis, 12:20899 (R;US)
**Concawe, The Hague (Netherlands)**
Sulfur emissions from combustion of residual fuel oil based on EEC energy demand and supply, 1980-2000, 12:19990 (R;US)
**Coordinating Research Council, Inc., Atlanta, GA (USA)**
CRC (Coordinating Research Council) octane number requirement survey, 12:19977 (R;US)
**Cornell Univ., Ithaca, NY (USA)**
Ion-beam-mixing in metal-metal systems and metal-silicon systems, 12:20617 (D;US)
**Council for Scientific and Industrial Research, Faure (South Africa). National Accelerator Centre**
Standardization of /sup 57/Co by liquid scintillation coincidence counting, 12:20801 (R;ZA)
**Council for Scientific and Industrial Research, Pretoria (South Africa). National Accelerator Centre**
15 channel 2- and 3-fold coincidence counting system for radioactivity standardization, 12:21007 (R;ZA)
Doping of silicon by laser-induced diffusion, 12:21751 (R;ZA;In English and Afrikaans)

## D

**Decision Focus, Inc., Los Altos, CA (USA)**
Cost-benefit analysis of demand-side planning alternatives: Final report, 12:20473 (R;US)
The Transformer/Capacitor Risk Management model: Final report, 12:20928 (R;US)
**Denver Wildlife Research Center, CO (USA)**
Differential response of coyotes to novel stimuli in familiar and unfamiliar environments, 12:21140 (R;US)
**Department of Commerce, Boulder, CO (USA). Inst. for Telecommunication Sciences**
Ionospheric Communications Analysis and Prediction Program (IONCAP) (for microcomputers). Software, 12:21413 (R;US)
**Department of Energy, London (UK)**
Passive solar design in non-domestic buildings, 12:20252 (R;GB)
**Department of Energy, London (UK). Energy Efficiency Office**
Advanced lighting control system using mains signalling and remote (infra-red) reset in a refurbished office building. A demonstration at Lloyds Bank plc. Final Report, 12:20485 (R;GB)
Application of regenerative ceramic burners on an aluminium bulk melting furnace. A demonstration at Alcan Enfield Alloys Ltd. Final Report , 12:20504 (R;GB)
Assessment of 'replication', 12:20460 (R;GB)
Heat recovery from an aluminium furnace for air pre-heating and stock drying. A demonstration at London and Scandinavian Metallurgical Co. Ltd. Final Report , 12:20502 (R;GB)
Microprocessor control of agitators in suspension storage tanks. A demonstration at Cookson Ceramics and Antimony Ltd. (formerly HMR Group Ltd.). Final Report, 12:20501 (R;GB)
Recovery of waste heat in the glass industry, 12:20503 (R;GB)

Use of an oxygen trim control system on a steady load natural gas-fired pressurised hot water boiler. Final Report, 12:20510 (R;GB)
Ventilation control by measurement of carbon dioxide levels in public entertainment buildings. A demonstration in a cinema and a bingo and social club operated by Rank Organisation plc. Final Report, 12:20486 (R;GB)
Waste-fired steam boiler and baling plant. Final Report, 12:20169 (R;GB)

**Department of Energy, Washington, DC (USA). Office of Fusion Energy**
BEATRIX: The international breeder materials exchange, 12:21960 (R;US)

**Deutsche Forschungs- und Versuchsanstalt fuer Luft- und Raumfahrt e.V., Koeln (Germany, F.R.)**
Investigations on the entropy of cloudy air, 12:21052 (R;DE;In German)

**Deutsche Forschungs- und Versuchsanstalt fuer Luft- und Raumfahrt e.V., Oberpfaffenhofen (Germany, F.R.). Inst. fuer Physik der Atmosphaere**
Investigations on the entropy of cloudy air, 12:21052 (R;DE;In German)

**Du Pont de Nemours (E.I.) and Co., Aiken, SC (USA). Savannah River Lab.**
Capabilities and modification plans for the Savannah River New Special Recovery facilities, 12:20104 (R;US)
Concept development for saltstone and low level waste disposal, 12:20102 (R;US)
Demonstration of a remotely operated TRU waste size-reduction and material handling process, 12:20101 (R;US)
Investigation of lead-iron-phosphate glass for SRP waste, 12:20100 (R;US)
Ion exchange processes for clean-up of dilute waste streams by the F/H Effluent Treatment Facility at the Savannah River Plant, 12:20105 (R;US)
Leaching TC-99 from DWPF glass in simulated geologic repository groundwaters, 12:20106 (R;US)
Mobile robots in research and development programs at the Savannah River site, 12:20822 (R;US)
Reprocessing of nuclear fuels at the Savannah River Plant, 12:20046 (R;US)
Tank farm processing of high-level waste for the Defense Waste Processing Facility, 12:20103 (R;US)
WIPP [Waste Isolation Pilot Plant]/SRL in situ tests: Part 2, Pictorial history of MIIT [Materials Interface Interactions Tests] and final MIIT matrices, assemblies, and sample listings, 12:20657 (R;US)

**Du Pont de Nemours (E.I.) and Co., Aiken, SC (USA). Savannah River Plant**
Deaerator inspection and analysis, 12:20821 (R;US)

## E

**Ebasco Services, Inc., New York (USA)**
Feasibility study of Coal Gasification/Fuel Cell/Cogeneration economic and financing assessment, 12:20509 (R;US)

**ECD Partnership, London (UK)**
Ventilation control by measurement of carbon dioxide levels in public entertainment buildings. A demonstration in a cinema and a bingo and social club operated by Rank Organisation plc. Final Report, 12:20486 (R;GB)

**Economist Intelligence Unit, London (UK)**
Soviet energy to 2000, 12:20465 (R;GB)

**EG and G Energy Measurements, Inc., Goleta, CA (USA). Santa Barbara Operations**
Differential response of coyotes to novel stimuli in familiar and unfamiliar environments, 12:21140 (R;US)
Wildlife management plan, Naval Petroleum Reserve No. 1, Kern County, California, 12:21125 (R;US)

**EG and G Idaho, Inc., Idaho Falls (USA)**
Determination of crack initiation sites using a digital NDE workstation, 12:20917 (R;US)
Pellet injection results during TFTR Ohmic and neutral beam heating experiments, 12:21870 (R;XA)

**Eidgenoessisches Inst. fuer Reaktorforschung, Wuerenlingen (Switzerland)**
Calculation of the fine spectrum and integration of the resonance cross sections in the cells, 12:20322 (R;CH;In French)
Core optimization studies for a small heating reactor, 12:20331 (R;CH)
Experimental investigation of atmospheric dispersion over complex terrain in a prealpine region (experiment SIESTA), 12:21053 (R;DE)
Recent joint developments in cross-section uncertainty analysis at Los Alamos and EIR [Eidgenoessiches Institut fuer Reaktorforschung], 12:21625 (R;US)
Validation of the EIR LWR calculation methods for criticality assessment of storage pools, 12:20323 (R;CH)

**Eidgenoessische Technische Hochschule, Zurich (Switzerland). Lab. fuer Atmosphaerenphysik**
Experimental investigation of atmospheric dispersion over complex terrain in a prealpine region (experiment SIESTA), 12:21053 (R;DE)

**Electric Power Research Inst., Palo Alto, CA (USA)**
Analysis of the off-design performance and phased construction of integrated-gasification-combined-cycle power plants: Volume 1, Results and conclusions: Final report, 12:20311 (R;US)
Analysis of the off-design performance and phased construction of integrated-gasification-combined-cycle power plants: Volume 2, Models and procedures: Final report, 12:20312 (R;US)
Assessment of sulfur in chemical cleaning of PWR [pressurized water reactor] steam generators: Final report, 12:20332 (R;US)
Bench-scale combustion characterization of cleaned Kentucky No. 9 coals: Final report, 12:19963 (R;US)
Causes of end corrective actions for pitting in steam generator tubing: Final report, 12:20536 (R;US)
Caustic concentration in tube support plate crevices of steam generators: Topical report, 12:20381 (R;US)
Coal gasification tests at TVA [Tennessee Valley Authority]: Final report, 12:19907 (R;US)
Coal-water-slurry transportation alternatives: Final report, 12:19959 (R;US)
Coatings technology for hot components of industrial combustion turbines: A review of the state of the art: Final report, 12:20313 (R;US)
Combustion characterization of the Kentucky No. 9 cleaned coals: Final report, 12:19892 (R;US)
Cost-benefit analysis of demand-side planning alternatives: Final report, 12:20473 (R;US)
Demand-side planning program: Projects and products, 1974-1986, 12:20472 (R;US)
Fireside corrosion and fly ash erosion in boilers: Final report, 12:20315 (R;US)
Guidelines for the evaluation of seam-welded steam pipes: Final report, 12:20314 (R;US)
High-efficiency axial compressor: Final report, 12:20505 (R;US)
LaPorte liquid-phase methanol process development unit: Continued operation in liquid-entrained catalyst mode: Final report, 12:19909 (R;US)
Liquid-entrained catalyst operations at LaPorte Pilot Plant for liquid-phase methanol process, 1984-1985: Final report, 12:19908 (R;US)
Performance of mechanical systems for condenser cleaning: Final report, 12:20318 (R;US)
Specially prepared alloy 600 tubing: Final report, 12:20537 (R;US)
Survey of utility lighting programs: Final report, 12:20474 (R;US)
The Transformer/Capacitor Risk Management model: Final report, 12:20928 (R;US)

**Energy and Environmental Analysis, Inc., Arlington, VA (USA)**
Distribution of methanol for motor vehicle use in the California South Coast Air Basin: [Final technical report], 12:20165 (R;US)

**Energy and Environmental Research Corp., Irvine, CA (USA)**
Kinetics of nitrogen and sulfur reactions in combustion systems: Quarterly report No. 6, 12:20317 (R;US)

**Engineering-Science, Inc., Denver, CO (USA)**
Installation-restoration program Phase II - confirmation/quantification Stage 1 for Air Force Plant PJKS, Waterton, Colorado. Volume 1. Final report, October 1985-October 1986, 12:21117 (R;US)

Installation-restoration program Phase II - confirmation/ quantification Stage 1 for Air Force Plant PJKS, Waterton, Colorado. Volume 2. Final report, October 1985-October 1986, 12:21118 (R;US)

Correlation between decomposition structure and fatigue crack propagation in a copper-nickel-chromium alloy, 12:20539 (R;DE;In German)

**Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii**
Automated complex for muon investigations, 12:20980 (R;SU;In Russian)
By layer analysis of structural perfection of monocrystal near surface layers by the asymptotic Bragg diffraction, 12:21733 (R;SU;In Russian)
Collision forces in various oxygen and carbon ions at transition excitation by electron impact, 12:21428 (R;SU;In Russian)
Influence of the process (dμ)sub(n)+t -> d+(tμ)sub(n) on the kinetics of muon catalysis in a mixture D/sub 2/+T/sub 2/, 12:21630 (R;SU)
Nuclear magnetic gamma double resonance, 12:21732 (R;SU;In Russian)
Quantum mechanics and liquid drop model of nuclei, 12:21667 (R;SU)
Reconstruction of parahydrogen phonon density from neutron data. Multiphonon process consideration, 12:21735 (R;SU;In Russian)
Sputtering by nuclear fragments, 12:21734 (R;SU;In Russian)
Stress-strained analysis of fuel rods taking into account anisotropy of properties of fuel and cladding materials, 12:20388 (R;SU;In Russian)
Study on the /sup 90/Zr(/sup 6/Li,/sup 6/He)/sup 90/Nb reaction at Esub(sup(6) Li) = 93 MeV, 12:21643 (R;SU;In Russian)

**Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki**
Analysis of dependence on target nucleus mass number of spectrum shapes and angular distributions of protons produced in hadron-nucleus interactions, 12:21636 (R;SU;In Russian)
Beta function in supersymmetric gauge theories. Instantons versus traditional approach, 12:21595 (R;SU)
BISAR code for two-dimensional analysis of reactor stability relatively to slow movements of the neutron field, 12:20357 (R;SU;In Russian)
Calculation of neutron field distortion in a reactor on control rod displacement (IGR code), 12:20378 (R;SU;In Russian)
Computer code for calculation of Alvarez type resonator geometrical parameters, 12:20961 (R;SU;In Russian)
Coulomb corrections in the low-energy scattering, 12:21543 (R;SU)
Disintegration of photoemulsion nuclei in small angle inelastic scattering of muons with 32 GeV momentum. Fast proton emission, 12:21506 (R;SU;In Russian)
Elastic and quasi-elastic /sup 3/Hep scattering at /sup 3/He nucleus momentum of 2.5 GeV/c, 12:21631 (R;SU;In Russian)
Energy dependence of p-odd angular asymmetry for fragments and atomic nucleus fission dynamics, 12:21673 (R;SU;In Russian)
Feasibility study on the project of proton-heavy ion accelerating complex on the base of the ITEP proton synchrotron, 12:20944 (R;SU;In Russian)
Four-quark states in the heavy quark system, 12:21541 (R;SU)
Inelastic scattering of 130MeV K/sup +/-mesons on light nuclei with proton escape, 12:21634 (R;SU;In Russian)
Infrared and collinear divergences in field theory, 12:21593 (R;SU;In Russian)
Manifestation of narrow maximum in the impulse distribution of $\pi$ mesons from the $\pi$/sup +/+A(C,Xe)->$\pi$/sup +-/+kp(k=0,1,2...)+A' reactons, 12:21635 (R;SU;In Russian)
Measurement of resolution functions using hadronic energy in antineutrino experiment at 15-foot Ne-H/sub 2/ bubble chamber, 12:20999 (R;SU;In Russian)
Multiple rescattering in the intranuclear cascade model, 12:21672 (R;SU;In Russian)
Muon sticking to helium in the muon catalyzed fusion ddμ -> μ/sup 3/He + n, 12:21438 (R;SU)
Numerical investigation of resistive longitudinal instability of nonbunched beam in heavy-ion rings, 12:21994 (R;SU;In Russian)
On the possibility of non-weak interactions of neutrinos, 12:21546 (R;SU)
Operator product expansion and calculation of the two-loop Gell-Mann-Low function, 12:21598 (R;SU)
P-matrix analysis of the ΛN -> ΣN system and the nature of the hadron peak near the ΣN threshold, 12:21542 (R;SU)
Preasymptotical corrections to the pomeron exchange, 12:21544 (R;SU)
Proton, neutron and deuteron yields from different nuclei including separated Li, B, Ni, Sn isotopes, 12:21633 (R;SU;In Russian)
Quadrupole moments of hadrons, 12:21545 (R;SU)
Quasiperiodical orbits in the scalar classical lambdaphi/sup 4/ field theory, 12:21596 (R;SU)
Some estimates in analytic theory of Hill absolute stability, 12:21796 (R;SU;In Russian)
Strong interaction: experiments from 1982 to 1984. Heavy quarks, 12:21507 (R;SU;In Russian)
Study on the mechanism of the /sup 3/He+p->p+p+d reaction at /sup 3/He momentum of 5 GeV/c, 12:21674 (R;SU)
Supersymmetry in a space with auxilliary dimensions, 12:21594 (R;SU)
SUSY non-Abelian gauge models: exact beta function from one loop of perturbation theory, 12:21597 (R;SU)
Use of the Ksub(892)sup(*+-) resonance as an indicator of systematic distortions for the 2 meter hydrogen liquid ITEhF chamber, 12:20997 (R;SU;In Russian)
Wide-aperture multichannel threshold high-pressure Cherenkov detector, 12:20998 (R;SU;In Russian)

**Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.**
Applicability study of the first collision probability method for calculation of cells with heavy shielded burnable poison rods, 12:20375 (R;SU;In Russian)
Interaction of slow neutrons with water in near- and subcritical region. Analysis of translational part of scattering law, 12:21705 (R;SU;In Russian)
Iterative selection principles for homogenized group constants, 12:20377 (R;SU;In Russian)
Lumped parameter method in problems on temperature field in deformed fuel bundles of fast reactors with diabatic boundary conditions, 12:20363 (R;SU;In Russian)
Mechanisms of interstitial loop formation in metals under low radiation doses, 12:21722 (R;SU;In Russian)

On applying the variational method to diffusion accompanied by chemical reactions, 12:20364 (R;SU;In Russian)
Reactor Ksub(eff) calculation using the albedo-diffusion approximation, 12:20376 (R;SU;In Russian)
Structure functions and leptonic widths of heavy mesons, 12:21533 (R;SU)
Study of niobium-oxygen and vanadium-nitrogen solid solutions using slow neutron scattering technique, 12:20633 (R;SU;In Russian)

Tropical forests: a call for action. Part 1: the plan. Part 2: case studies. Part 3: country investment profiles, 12:20456 (R;US)

## Y

**Yale Univ., New Haven, CT (USA)**
Alfven wave heating in the ideal MHD and Guiding Center Plasma models, 12:21950 (D;US)
Effects of autoionization on the photoionization induced alignment of cadmium II ($4d^9\ 5s^2\ ^2D/sub\ 5/2/$), 12:21469 (D;US)
**Yale Univ., New Haven, CT (USA). Dept. of Biology**
Effect of surface and membrane potentials on IAA [indoleactic acid] uptake and binding by zucchini membrane vesicles, 12:21142 (R;US)

# PERSONAL AUTHOR INDEX

Authors' surnames are indexed in the form appearing in the abstracted publication; given names are reduced to initials. Each author entry gives the publication title and the citation number. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes. For publications with multiple authors, an entry is provided for each author. Entries for the second and succeeding authors give references to the first author.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. Changes in spelling introduced as a result of accent omission follow standard conventions.

# SUBJECT INDEX

The subject index is based on the use of subject descriptors selected from a controlled thesaurus of terms (DOE/TIC-7000). Subject descriptors and qualifiers (subheadings) are selected and presented in the following format:

SUBJECT DESCRIPTOR
Qualifier
Title, (supplementary information), citation number, (R;US)

The notations in the final parentheses indicate the type of document, e.g., R for Report; the country of publication, e.g., US; and the language if other than English, e.g., In German. Tables of document types and country of publication codes appear after the indexes.

The title may be supplemented with additional words, or a phrase, if it appears additional information would be helpful. In cases for which the title contains little or no information related to the subject entry, it may be replaced entirely by the supplementary information. A qualifier is not always required, and in such cases the title will follow the unqualified subject descriptor.

The descriptors selected for use as subject terms are generally the names of specific materials, things, or processes. To the extent possible, a qualifier is selected to describe the properties of, or processes applied to, the subject term.

Index entries are selected to indicate the important ideas and concepts presented in a document, rather than words that may appear in the text. Within the available thesaurus terms, the most probable or logical place to look for typical information is selected. "See references" are included to guide users from synonymous terms or phrases to the descriptor selected as a subject heading for the concept (e.g., Pipeline Quality Gas, see HIGH BTU GAS). "See also references" are used to indicate where to find references to subject concepts that are narrower, broader, or related to a particular subject heading. To complete an exhaustive search of a given subject, all such headings should be reviewed. Copies of DOE/TIC-7000, the Subject Thesaurus, are available from the National Technical Information Service (NTIS), U.S. Department of Commerce, Springfield, VA 22161.

## A

**A CODES**
Synthesis and characterization of (pentamethylcyclopentadienyl)iridium polyhydride and polyphosphine complexes, 12:20748 (R;US)
**Computerized Simulation**
First step of the project for implementation of two non-symmetric cooling loops modeled by the ALMOD3 code, 12:20328 (R;BR;In Portuguese)
**Manuals**
Automatic generation control simulation: Program reference manual, 12:20309 (R;US)
**Steam Generators**
First step of the project for implementation of two non-symmetric cooling loops modeled by the ALMOD3 code, 12:20328 (R;BR;In Portuguese)
**A1-1070 RESONANCES**
**Form Factors**
Form factors of mesons and meson resonances at small and intermediate momentum transfers Q/sup 2/ in the relativistic quark model, 12:21527 (R;SU)
**Particle Decay**
Form factors of mesons and meson resonances at small and intermediate momentum transfers Q/sup 2/ in the relativistic quark model, 12:21527 (R;SU)
**ABNORMALITIES (CHROMOSOMAL)**
*See CHROMOSOMAL ABERRATIONS*
**A-BOMB SURVIVORS**
**Radiation Doses**
Perspectives on radiation dose estimates for A-bomb survivors, 12:21205 (R;US)
Sensitivity/uncertainty analysis for the Nagasaki dosimetry reevaluation effort, 12:21202 (R;US)
**ABRASIVES**
**Carcinogens**
Mortality among workers exposed to cutting fluids and abrasives: Bearing Plant 1, 12:21231 (R;US)
**ABSORBED DOSES**
*See RADIATION DOSES*
**ACCELERATOR FACILITIES**
*See also STANFORD LINEAR COLLIDER*
**Mass Spectroscopy**
Conference summary, 12:20968 (J;NL)
**ACCELERATORS**
*See also HEAVY ION ACCELERATORS*
*LINEAR ACCELERATORS*
*PARTICLE BEAM FUSION ACCELERATOR*
Report on ICFA, 12:20943 (R;JP)
**Beam Dynamics**
$e^+$ e/sub -/ colliders, 12:20952 (BA;US)
New acceleration methods, 12:20951 (BA;US)
Topics in the physics of particle accelerators, 12:20950 (BA;US)
**Carbon Dioxide Lasers**
Application of picosecond $CO_2$ lasers to particle accelerators, 12:20945 (R;US)
**Electron Beams**
Output characteristics of 2 MeV, 60 kW, dual beam type electron accelerator of TRCRE, JAERI, 12:20962 (R;JP;In Japanese)
**Mass Spectroscopy**
Accelerator mass spectrometry: from nuclear physics to dating, 12:20970 (J;US)
**Reviews**
New acceleration methods, 12:20951 (BA;US)
Topics in the physics of particle accelerators, 12:20950 (BA;US)
**ACCIDENTAL INTAKE**
*See ACCIDENTS*
**ACCIDENTS**
*See also REACTOR ACCIDENTS*
**Radiation Doses**
Safety assessment of accident radiological releases: a study performed for the conceptual design of a geologic repository at Yucca Mountain, Nevada, 12:20135 (J;US)
**ACCRETION DISKS**
**Acceleration**
Magnetic braking in weakly ionized circumstellar disks, 12:21387 (RA;US)
**Magnetic Fields**
Magnetic braking in weakly ionized circumstellar disks, 12:21387 (RA;US)
**ACES**
*See QUARKS*
**ACETIC ACID**
**Ecological Concentration**
Organic acids in springtime Wisconsin precipitation samples, 12:21103 (J;GB)

**ACETONE**
**Absorption Spectra**
Transient phenomena in the pulse radiolysis of retinyl polyenes. 6. Radical ions of retinal homologues, 12:20798 (J;US)
**Chemical Reactions**
Transient phenomena in the pulse radiolysis of retinyl polyenes. 6. Radical ions of retinal homologues, 12:20798 (J;US)
**Fragmentation**
Fragmentation of acetone following excitation in the region of the oxygen K edge, 12:20797 (J;US)
**Photolysis**
Fragmentation of acetone following excitation in the region of the oxygen K edge, 12:20797 (J;US)
**Solvent Properties**
Characterization of a resinite maceral fraction, 12:19914 (R;US)
**ACETYLENE**
**Adsorption**
Bonding and thermal decomposition of propylene, propadiene, and methylacetylene on the Rh(111) single-crystal surface, 12:20757 (J;US)
**Chemical Reactions**
Bonding and thermal decomposition of propylene, propadiene, and methylacetylene on the Rh(111) single-crystal surface, 12:20757 (J;US)
**Infrared Spectra**
Infrared spectrum of the acetylene radical cation $C_2H^+_2$. A theoretical study using SCF, MCSCF, and CI methods, 12:21452 (J;US)
**Molecular Crystals**
Calculated high-pressure properties of solid acetylene and possible polymerization paths, 12:20680 (J;US)
**Polymerization**
Calculated high-pressure properties of solid acetylene and possible polymerization paths, 12:20680 (J;US)
**ACID ELECTROLYTE FUEL CELLS**
**Anodes**
Surfactant addition to phosphoric acid electrolyte, 12:20481 (P;US)
**Cathodes**
Surfactant addition to phosphoric acid electrolyte, 12:20481 (P;US)
**Electrolytes**
Surfactant addition to phosphoric acid electrolyte, 12:20481 (P;US)
**ACID RAIN**
**Chemical Composition**
Organic acids in springtime Wisconsin precipitation samples, 12:21103 (J;GB)
**Deposition**
Acid deposition and forest nutrient cycling, 12:21062 (R;US)
**Environmental Effects**
Chemical processes in forest soils: Final report, 12:21119 (R;US)
**Precipitation Scavenging**
Mesoscale storm and dry period parameters from hourly precipitation data, 12:21102 (J;GB)
**Samplers**
Siting criteria for regionally located-wet deposition collection sites, 12:21082 (R;US)
**ACIDS (ORGANIC)**
*See ORGANIC ACIDS*
**ACOUSTIC AGGLOMERATORS**
**Economics**
Acoustic agglomeration of power plant fly ash: Semi-annual technical report, 5/6/86 to 11/5/86, 12:19919 (R;US)
**ACOUSTIC EMISSION TESTING**
Acoustic emission point source locations on thin spherical shell, 12:20921 (R;US)
**CAMAC System**
Determination of crack initiation sites using a digital NDE workstation, 12:20917 (R;US)
**ACRIDINES**
**Radiationless Decay**
Time-resolved study of singlet molecular oxygen ($^1m$/sub g/$O_2$) formation in a solution-phase photosensitized reaction: a new experimental technique to examine the dynamics of quenching by oxygen, 12:20790 (J;US)
**ACTINIDE NUCLEI**
*See also AMERICIUM 241*
*AMERICIUM 242*
*CALIFORNIUM 252*
*PLUTONIUM 239*
*PLUTONIUM 240*
*THORIUM 231*
*THORIUM 232*
*URANIUM 233*
*URANIUM 234*
*URANIUM 235*
*URANIUM 238*
**Isotope Production**
Dependence of actinide production on the mass number of the projectile: Xe +/sup 248/Cm, 12:21659 (J;US)
**ACTINIDES**
*See also AMERICIUM*
*NEPTUNIUM*
*PLUTONIUM*

**AGRICULTURE**
**Energy Efficiency**
Africa Bureau energy-strategy statement, Agency for International Development, 12:20462 (R;US)
**Irrigation**
Irrigation customer survey procedures and results, 12:20476 (R;US)
**AIR**
**Combustion Kinetics**
Laminar flame propagation in premixed gases, 12:20162 (B;US)
**AIR CONDITIONING**
**Evaporative Cooling**
MAX air-conditioner development: advanced indirect/direct evaporative cooling. Final report, 5 December 1984-31 July 1986, 12:20488 (R;US)
**AIR FILTERS**
**Design**
Innovative HEPA [high-efficiency particulate air] filter designs to reduce waste generation and simplify waste treatment, 12:20126 (R;US)
**P Codes**
Evaluation of methods, instrumentation, and materials pertinent to quality assurance filter penetration testing: Final report, 12:21239 (R;US)
**Quality Assurance**
Evaluation of methods, instrumentation, and materials pertinent to quality assurance filter penetration testing: Final report, 12:21239 (R;US)
**AIR FLOW**
**Heat Transfer**
Convection calibration method for local heat flux gages, 12:20910 (J;US)
Heat transfer effects of a longitudinal vortex embedded in a turbulent boundary layer, 12:20909 (J;US)
**AIR POLLUTION**
*See also INDOOR AIR POLLUTION*
**Air Curtains**
Pilot demonstration of the air-curtain system for fugitive-particle control. Final report, June 1982-August 1986, 12:21088 (R;US)
**Air Samplers**
Evaluation of an EPA (Environmental Protection Agency) high-volume air sampler for polychlorinated dibenzo-p-dioxins and polychlorinated dibenzofurans, 12:21083 (R;US)
**Data Base Management**
National Air Toxics Information Clearinghouse: NATICH data base report on state and local agency air toxics activities, July 1986. Volumes 1 and 2. Interim report, 12:21067 (R;US)
**Ecological Concentration**
Use of an equation solver package for quickly estimating source terms, 12:21097 (J;US)
**Mathematical Models**
EPA (Environmental Protection Agency) complex-terrain model development: description of a computer data base from the Full-Scale Plume Study, Tracy Power Plant, Nevada. Final report, 12:21092 (R;US)
Method for evaluation of atmospheric vapor concentrations emitted by instantaneous or continuous sources. Technical note, 12:21072 (R;US;FR)
Port Vessel Emissions Model: a computer model for calculating vessel air pollutants (for microcomputers). Model, 12:21073 (R;US)
Port Vessel Emissions Model: a computer model for calculating vessel air pollutants. Volume 1. Study report. Final report, October 1984-December 1986, 12:21074 (R;US)
Port Vessel Emissions Model: a computer model for calculating vessel air pollutants. Volume 2. User's manual. Final report, October 1984-December 1986, 12:21075 (R;US)
Port Vessel Emissions Model: a computer model for calculating vessel air pollutants. Volume 3. Workbook. Final report, October 1984-December 1986, 12:21076 (R;US)
**Pollution Control Equipment**
Pilot demonstration of the air-curtain system for fugitive-particle control. Final report, June 1982-August 1986, 12:21088 (R;US)
**Pollution Sources**
Investigation of source-emission PM-10 particulate matter field studies of candidate methods. Final report, 12:21089 (R;US)
**Regulations**
Primary aluminum: statistical analysis of potline fluoride emissions and alternate sampling frequency. Final report, 12:21086 (R;US)
Review of new source performance standards for primary aluminum reduction plants. Final report, 12:21087 (R;US)
**Samplers**
Investigation of source-emission PM-10 particulate matter field studies of candidate methods. Final report, 12:21089 (R;US)
Siting criteria for regionally located-wet deposition collection sites, 12:21082 (R;US)
**AIR POLLUTION ABATEMENT**
*Use this term for items that involve the prevention of formation of pollutants at the source.*
**Foreign Policy**

**Absorption Spectroscopy**
Use of electrothermal atomization for determining metallic impurities in nuclearly pure uranium compounds, 12:20728 (R;BR;In Portuguese)
**Adsorption**
Force and total-energy calculations for a spatially compact adsorbate on an extended, metallic crystal surface, 12:20563 (J;US)
**Electronic Structure**
Force and total-energy calculations for a spatially compact adsorbate on an extended, metallic crystal surface, 12:20563 (J;US)
**Emission Spectroscopy**
Spectrographic determination of impurities in beryllium oxide, 12:20730 (R;BR;In Portuguese)
**Ion Collisions**
Secondary-ion emission from clean and oxidized aluminum as a function of incident ion mass and energy, 12:20567 (J;US)
**Laser-Produced Plasma**
Radiation transport and preheat calculations of laser irradiated Al targets, 12:21864 (RA;IL)
**Opacity**
Effects of low velocity air flow over alumina-silica insulating boards in solar environments, 12:20280 (R;US)
**Physical Radiation Effects**
Elastic waves induced in a semi-infinite body with cover by a pulse radiation, 12:21436 (RA;SU;In Russian)
Ion-beam-mixing in metal-metal systems and metal-silicon systems, 12:20617 (D;US)
**Positron Collisions**
Positronium time-of-flight spectroscopy of dissimilar metals, 12:20555 (J;US)
**Secondary Emission**
Secondary-ion emission from clean and oxidized aluminum as a function of incident ion mass and energy, 12:20567 (J;US)
**Solar Heating**
Effects of low velocity air flow over alumina-silica insulating boards in solar environments, 12:20280 (R;US)
**Sound Waves**
Elastic waves induced in a semi-infinite body with cover by a pulse radiation, 12:21436 (RA;SU;In Russian)

**Stopping Power**
Oblique target transmission technique in measuring stopping powers, 12:21739 (R;XA)
Split-target technique in determining the dE/dX of 1.0-5.0 MeV tritium in Al, Ni and Au, 12:21431 (R;XA)
**Thermal Expansion**
Thermal expansion coefficient determination by CBED, 12:20613 (BA;US)
**Work Functions**
Positronium time-of-flight spectroscopy of dissimilar metals, 12:20555 (J;US)

**Beam Injection Heating**
Combined application of neutral injection, lower hybrid, and ion cyclotron resonance heating in ASDEX and synergetic effects, 12:21986 (RA;DE)
Comparison of ICRH and LH accelerated hydrogen ions in NI heated ASDEX plasmas, 12:21894 (RA;DE)
Free-boundary flow equilibria for ASDEX-UG, 12:21882 (RA;DE)
**Beta Ratio**
Influence of the current distribution on the achievable $\beta$-values in ASDEX, 12:21889 (RA;DE)
**Charged-Particle Transport**
Energy and particle transport in medium-density ASDEX pellet discharges, 12:21884 (RA;DE)
**Electric Currents**
Influence of the lower hybrid wave spectrum on the current distribution in ASDEX, 12:21898 (RA;DE)
**Energy Transfer**
Energy and particle transport in medium-density ASDEX pellet discharges, 12:21884 (RA;DE)
**Fishbone Instability**
ICRF H-mode and 2Ω/sub CH//D(H)-minority heating on ASDEX, 12:21892 (RA;DE)
MHD characteristics of ASDEX H-type discharges approching the $\beta$ limit, 12:21890 (RA;DE)
**ICR Heating**
Combined application of neutral injection, lower hybrid, and ion cyclotron resonance heating in ASDEX and synergetic effects, 12:21986 (RA;DE)
Comparison of ICRH and LH accelerated hydrogen ions in NI heated ASDEX plasmas, 12:21894 (RA;DE)
ICRF H-mode and 2Ω/sub CH//D(H)-minority heating on ASDEX, 12:21892 (RA;DE)
**Impurities**
Evolution of radiation power profiles in ASDEX H-mode discharges, 12:21988 (RA;DE)
**Lower Hybrid Heating**
Combined application of neutral injection, lower hybrid, and ion cyclotron resonance heating in ASDEX and synergetic effects, 12:21986 (RA;DE)
Comparison of ICRH and LH accelerated hydrogen ions in NI heated ASDEX plasmas, 12:21894 (RA;DE)
Influence of the lower hybrid wave spectrum on the current distribution in ASDEX, 12:21898 (RA;DE)
Measurements of non-thermal electron population during lower-hybrid heating in ASDEX, 12:21897 (RA;DE)
**Meetings**
ASDEX papers at the 13th European conference on controlled fusion and plasma physics, 12:21984 (R;DE)
**MHD Equilibrium**
Dimensionality of fluctuations in ASDEX, 12:21881 (RA;DE)
MHD-effects with NI and ICRF heating on ASDEX, 12:21891 (RA;DE)
**Pellet Injection**
Increase of the density limit in ASDEX by repetitive pellet injection, 12:21987 (RA;DE)
**Plasma Confinement**
Analysis of the invariance property of the electron temperature during auxiliary heating in ASDEX, 12:21885 (RA;DE)
Particle confinement in ohmically heated ASDEX plasmas, 12:21886 (RA;DE)
Transport in beam-heated ASDEX discharges below and in the vicinity of the beta limit, 12:21888 (RA;DE)
**Plasma Diagnostics**
Measurements of charged fusion products in ASDEX, 12:21900 (RA;DE)
Measurement of plasma emission profiles in the range from 800-1000 nm for Z/sub EFF/-analysis in ASDEX, 12:21902 (RA;DE)
Particle confinement in ohmically heated ASDEX plasmas, 12:21886 (RA;DE)
Periodic Thomson scattering diagnostic with 16 spatial channels on ASDEX, 12:21901 (RA;DE)
Probe measurements of plasma inhomogeneities in the scrape-off layer of ASDEX during LH, 12:21899 (RA;DE)
**Plasma Waves**
MHD characteristics of ASDEX H-type discharges approching the $\beta$ limit, 12:21890 (RA;DE)
**Rotating Plasma**
Free-boundary flow equilibria for ASDEX-UG, 12:21882 (RA;DE)

Nuclear power plants and the environment, 12:20400 (RA;CS;In Slovak)
**Reactor Accidents**
Risk uncertainty analysis methods for NUREG-1150, 12:20437 (R;US)
**Reactor Dismantling**
Plasma arc and thermal lance techniques for cutting concrete and steel, 12:20419 (R;FR)
**Reactor Kinetics**
Calculation of the fine spectrum and integration of the resonance cross sections in the cells, 12:20322 (R;CH;In French)
Validation of the EIR LWR calculation methods for criticality assessment of storage pools, 12:20323 (R;CH)
**Reactor Licensing**
Safety-related topics from the Nuclear Power Options Viability Study, 12:20438 (J;US)
**Reactor Safety**
Proceedings of the US Nuclear Regulatory Commission fourteenth water reactor safety information meeting: Volume 1, Plenary session, Severe accident sequence analysis, Risk analysis/PRA applications, Reference plant risk analysis - NUREG-1150, Innovative concepts for increased safety of advanced power reactors, 12:20433 (R;US)
Proceedings of the US Nuclear Regulatory Commission fourteenth water reactor safety information meeting: Volume 3, Equipment qualification, Mechanical and structural research, Seismic research, Nuclear plant aging, 12:20435 (R;US)
Proceedings of the US Nuclear Regulatory Commission fourteenth water reactor safety information meeting: Volume 2, Research in nondestructive evaluation, Environmental effects in primary system components, Pressure vessel research, Irradiation effects on RPV steels, Degraded piping research, 12:20434 (R;US)
Proceedings of the US Nuclear Regulatory Commission fourteenth water reactor safety information meeting: Volume 6, TMI-2 analyses, Fission product release and transport in containment, Severe accident source term, Containment systems research/containment loads analysis, 12:20436 (R;US)
Safety-related topics from the Nuclear Power Options Viability Study, 12:20438 (J;US)
**Temperature Coefficient**
Measurement of reactivity temperature coefficient by noise method in power reactors. Theory, 12:21023 (R;HU)

## C

**CADARACHE (CEA)**
*See CEA CADARACHE*
**CADMIUM**
**Absorption Spectroscopy**
Use of electrothermal atomization for determining metallic impurities in nuclearly pure uranium compounds, 12:20728 (R;BR;In Portuguese)
**Air Pollution Control**
Cadmium pollution caused by Cd-emissions from an industrial plant, 12:21065 (R;DE;In German)
**Emission Spectroscopy**
Spectrographic determination of impurities in beryllium oxide, 12:20730 (R;BR;In Portuguese)
**Land Pollution Control**
Cadmium pollution caused by Cd-emissions from an industrial plant, 12:21065 (R;DE;In German)
**Photoionization**
Effects of autoionization on the photoionization induced alignment of cadmium II (4d$^9$ 5s$^2$ $^2$D/sub 5/2/), 12:21469 (D;US)
**Removal**
Disposal of low-level radioactive waste using high-calcium fly ash. Final report, 12:20098 (R;US)
**Toxicity**
Summary introduction to environmental toxicology. Information paper, 12:21229 (R;DE;In German)
**Water Pollution**
Seasonal variability in Prickly Pear Creek water quality and macroinvertebrate communities, 12:21130 (R;US)

**CADMIUM FLUORIDES**
Absorption Spectra
Optical properties of $Cr^{3+}$ in fluorite-structure hosts and in $MgF^{*}_{2}$, 12:20857 (J;US)
Chromium Additions
Optical properties of $Cr^{3+}$ in fluorite-structure hosts and in $MgF^{*}_{2}$, 12:20857 (J;US)
**CADMIUM IONS**
Alignment
Effects of autoionization on the photoionization induced alignment of cadmium II (4d⁹ 5s² ²D/sub 5/2/), 12:21469 (D;US)
Excited States
Effects of autoionization on the photoionization induced alignment of cadmium II (4d⁹ 5s² ²D/sub 5/2/), 12:21469 (D;US)
**CADMIUM SELENIDES**
Crystal Defects
CdS induced homojunction formation in crystalline p-$CuInSe_2$, 12:20684 (J;US)
Homojunctions
CdS induced homojunction formation in crystalline p-$CuInSe_2$, 12:20684 (J;US)
**CADMIUM SULFIDES**
Chemical Preparation
Quantum size effects of in situ generated colloidal CdS particles in dioctadecyldimethylammonium chloride surfactant vesicles, 12:20795 (J;US)
**CADMIUM TELLURIDES**
Corrosion
Electron-number diagram for study of corrosion processes. Final report, 1 August 1984-31 July 1986, 12:20531 (R;US)
Photovoltaic Effect
Characterization of 2.5 microns HgCdTe detectors for low-background applications, 12:21028 (RA;US)
**CALCITE**
Solubility
Calcite solubility in simulated geothermal brines, 12:20300 (R;US)
**CALCIUM**
Plages
Solar-Geophysical Data Number 506, October 1986. Part 1 (prompt reports). Data for September 1986, August 1986, and late data, 12:21389 (R;US)
**CALCIUM 40 TARGET**
Electron Reactions
Nuclear medium effects in $^{40}Ca(e, e', p)^{39}K$ experiment, 12:21639 (R;FR)
Magnesium 24 Reactions
Beta-delayed proton decay of /sup 61/Ge, 12:21641 (J;US)
Silicon 28 Reactions
Beta-delayed proton decay of /sup 61/Ge, 12:21641 (J;US)
**CALCIUM FLUORIDES**
Absorption Spectra
Optical properties of $Cr^{3+}$ in fluorite-structure hosts and in $MgF^{*}_{2}$, 12:20857 (J;US)
Chromium Additions
Optical properties of $Cr^{3+}$ in fluorite-structure hosts and in $MgF^{*}_{2}$, 12:20857 (J;US)
**CALCIUM IONS**
Ion-Atom Collisions
Charge transfer and excitation in high-energy ion-atom collisions, 12:21923 (R;US)
K- and L-shell resonant transfer and excitation in ion-atom collisions (Resonant transfer), 12:21422 (R;US)
Light Scattering
Light-scattering cross sections of Ca/sup 2+/ and the calcium—cation-vacancy complex in KBr, 12:20673 (J;US)
**CALCIUM OXIDES**
Chemical Reactions
Kinetics of nitrogen and sulfur reactions in combustion systems: Quarterly report No. 6, 12:20317 (R;US)
Sorptive Properties
Kinetics of nitrogen and sulfur reactions in combustion systems: Quarterly report No. 6, 12:20317 (R;US)
**CALCULATIONS (1-DIMENSIONAL)**
*See ONE-DIMENSIONAL CALCULATIONS*
**CALIFORNIA**
Geothermal Fields
Modeling the natural state of geothermal systems, 12:20288 (J;US)
Geothermal Resources
Historical use of geothermal resource at Paso Robles, 12:20289 (J;US)
Mineral Resources
Dependence on mineral resources, 12:20457 (J;US)
**CALIFORNIUM 252**
Neutron Spectra
Measurement of the energy dependence of prompt fission neutron emission from /sup 233/U, /sup 235/U, and /sup 239/Pu for E = 0.0005 to 10 MeV relative to emission from spontaneous fission of /sup 252/Cf/sup */, 12:21660 (BA;US)
**CALORIMETERS (PARTICLE)**
*See SHOWER COUNTERS*
**CAM**
*See COMPUTER-AIDED MANUFACTURING*
**CANADA**
*See also ALBERTA*
*MANITOBA*
Hydrology
Semi-quantitative measurement of water flow through fractured crystalline rock using the borehole-dilution technique, 12:21254 (RA;US)
**CANARY ISLANDS**
Aquifers
Low permeability volcanics in the Canary Islands (Spain), 12:20088 (RA;US)
Hydrology
Low permeability volcanics in the Canary Islands (Spain), 12:20088 (RA;US)

*DIAMONDS*
*GRAPHITE*
Interfaces
Standing wave enhanced scattering in multilayer structures, 12:20679 (J;US)
Pion Plus Reactions
Manifestation of narrow maximum in the impulse distribution of $\pi$ mesons from the $\pi$/sup +/+A(C,Xe)->$\pi$/sup +-/+kp(k=0,1,2...)+A' reactons, 12:21635 (R;SU;In Russian)
Proton Reactions
Multiple rescattering in the intranuclear cascade model, 12:21672 (R;SU;In Russian)
Standing Waves
Standing wave enhanced scattering in multilayer structures, 12:20679 (J;US)

**X-Ray Diffraction**
Standing wave enhanced scattering in multilayer structures, 12:20679 (J;US)

**CARBON 11**
**Radiochemistry**
C-11-labeled octadecylamine, a potential agent for positron tomographic pulmonary metabolism studies, 12:21183 (J;US)

**CARBON 12**
**Giant Resonance**
Continuum shell model calculations and the resonances below the GDR in /sup 12/C, 12:21699 (BA;US)
**Nuclear Structure**
Continuum shell model calculations and the resonances below the GDR in /sup 12/C, 12:21699 (BA;US)
**Photonuclear Reactions**
Continuum shell model calculations and the resonances below the GDR in /sup 12/C, 12:21699 (BA;US)
**Shell Models**
Continuum shell model calculations and the resonances below the GDR in /sup 12/C, 12:21699 (BA;US)

**CARBON 12 REACTIONS**
**Heavy Ion Fusion Reactions**
Incomplete and complete fusion in intermediate energy heavy ion reactions, 12:21654 (J;SE)
**Precompound-Nucleus Emission**
Precompound decay in heavy ion reactions via the hybrid model, 12:21677 (J;US)

**CARBON 12 TARGET**
**Nitrogen 14 Reactions**
Correlations between $\alpha$ particles and evaporation residues for the /sup 14/N+/sup 12/C reaction at E(/sup 14/N) = 180 MeV, 12:21637 (J;US)

**CARBON 13**
**Isotope Separation**
Isotopic enrichment in a plasma centrifuge, 12:20746 (R;BR)
**Nuclear Magnetic Resonance**
Nuclear magnetic resonance study of the bonding and diffusion of CO chemisorbed on Pd, 12:20559 (J;US)

**CARBON 19**
**Mass**
Direct mass measurements of neutron-rich light nuclei near N = 20, 12:21638 (J;US)

**CARBON BLACK**
**Chemical Reactions**
Heterogeneous NO reduction: Single-pulse shock tube studies of global rates and mechanisms of NO and HCN reactions on flame-borne particulates, 12:19913 (RA;US)

**CARBON DIOXIDE**
**Chemical Reaction Yield**
Low severity coal liquefaction to determine reactivity of coals: Technical progress report No. 2 for period 09/01/86 through 11/30/86, 12:19906 (R;US)
Studies of initial reaction steps in the gasification of coal: Final report, October 1983-September 1985, 12:19898 (R;US)
**Emission**
Energy scenarios in addressing the $CO_2$ question, 12:19926 (J;US)
The $CO_2$ future: Inevitability or choice?, 12:20451 (R;US)
**Environmental Impacts**
Geophysical models of the fossil fuel CO/sub 2/ problem: [Annual progress report, February 1986-February 1987], 12:21063 (R;US)
The $CO_2$ future: Inevitability or choice?, 12:20451 (R;US)
The reality of the greenhouse effect, 12:21094 (R;US)
**Monitoring**
Ventilation control by measurement of carbon dioxide levels in public entertainment buildings. A demonstration in a cinema and a bingo and social club operated by Rank Organisation plc. Final Report, 12:20486 (R;GB)
**Photolysis**
High-temperature photochemistry kinetics study of the reaction of $O(^3P)$ atoms with ethylene from 290 to 1510 K, 12:20760 (J;US)
**Production**
Coal gasification via the Lurgi process: Topical report: Volume 1, Production of SNG [substitute material gas], 12:19896 (R;US)
**Solvent Properties**
Determination of the effect of carbon dioxide/water on physical and chemical properties of coal: Final report, 12:19890 (R;US)

**CARBON DIOXIDE LASERS**
**Q-Switching**
Passive q-switching of $CO_2$ TEA laser using sulfur hexafluoride ($SF_6$). Report for April-August 1986, 12:20845 (R;US)
**Uses**
Application of picosecond $CO_2$ lasers to particle accelerators, 12:20945 (R;US)

**CARBON FIBERS**
**Coatings**
Fiber wetting and coatings for composite fabrication. Technical report, 12:20652 (R;US)
**Wettability**
Fiber wetting and coatings for composite fabrication. Technical report, 12:20652 (R;US)

**CARBON IONS**
**Electron-Ion Collisions**
Collision forces in various oxygen and carbon ions at transition excitation by electron impact, 12:21428 (R;SU;In Russian)
**Energy-Level Transitions**
Collision forces in various oxygen and carbon ions at transition excitation by electron impact, 12:21428 (R;SU;In Russian)

**CARBON MONOXIDE**
**Atmospheric Chemistry**
AFGL (Air Force Geophysical Laboratory) atmospheric constituent profiles (0.120km). Environmental research papers, 12:21056 (R;US)
**Bond Lengths**
Nuclear magnetic resonance study of the bonding and diffusion of CO chemisorbed on Pd, 12:20559 (J;US)
**Chemical Reaction Yield**
Low severity coal liquefaction to determine reactivity of coals: Technical progress report No. 2 for period 09/01/86 through 11/30/86, 12:19906 (R;US)
Studies of initial reaction steps in the gasification of coal: Final report, October 1983-September 1985, 12:19898 (R;US)
**Chemisorption**
Nuclear magnetic resonance study of the bonding and diffusion of CO chemisorbed on Pd, 12:20559 (J;US)
**Diffusion**
Nuclear magnetic resonance study of the bonding and diffusion of CO chemisorbed on Pd, 12:20559 (J;US)
**Hydrogenation**
Optimum higher alcohol mixtures for fuels from syngas: Technical progress report, July-September 1986, 12:20164 (R;US)
**Total Cross Sections**
Potentials and scattering cross sections for collisions of He atoms with adsorbed CO, 12:21738 (R;XA)

**CARBON OXIDE SULFIDE**
*See CARBON OXYSULFIDE*

**CARBON OXYSULFIDE**
**Hydrolysis**
Coal gasification tests at TVA [Tennessee Valley Authority]: Final report, 12:19907 (R;US)

**CARBON STARS**
**Emission Spectra**
Spectral characteristics of dust in carbon rich objects, 12:21371 (RA;US)
**Infrared Spectra**
Mass return to the interstellar medium from highly-evolved carbon stars, 12:21336 (RA;US)
**Mass**
High-resolution mapping of mass loss from highly evolved carbon stars, 12:21335 (RA;US)
Mass return to the interstellar medium from highly-evolved carbon stars, 12:21336 (RA;US)
**Star Evolution**
Mass return to the interstellar medium from highly-evolved carbon stars, 12:21336 (RA;US)

Computer-assisted qualitative and quantitative analyses of energy-related complex mixtures, 12:19912 (R;US)
Pollution Control
Coal gasification tests at TVA [Tennessee Valley Authority]: Final report, 12:19907 (R;US)
Waste Water
Coal gasification tests at TVA [Tennessee Valley Authority]: Final report, 12:19907 (R;US)
COAL INDUSTRY
Research Programs
Authority and responsibility of advisory bodies and project assessment procedures to support decisions on research and development priorities and programmes, 12:19930 (R;XU)
COAL LIQUEFACTION
*See also LIQUID PHASE METHANOL PROCESS*
Chemical Reaction Kinetics
Coal liquefaction and hydrogen utilization at low temperatures, 12:19910 (J;US)
Hydrogen Transfer
Coal liquefaction and hydrogen utilization at low temperatures, 12:19910 (J;US)
Research Programs
Low severity coal liquefaction to determine reactivity of coals: Technical progress report No. 2 for period 09/01/86 through 11/30/86, 12:19906 (R;US)
Reactivity of heteroatom-containing organics during liquefaction of subbituminous coal: Quarterly technical progress report, December 15, 1986-March 15, 1987, 12:19905 (R;US)
COAL LIQUIDS
Chemical Composition
Determination and structural characteristics of sulfur heterocycles in coal- and petroleum-derived materials, 12:19987 (J;US)
Fractionation
Determination and structural characteristics of sulfur heterocycles in coal- and petroleum-derived materials, 12:19987 (J;US)
COAL MINING
Environmental Impacts
Blackhawk/Star Point Sandstone aquifer system hydrogeology northern Wasatch Plateau, central Utah, 12:19923 (RA;US)
Research Programs
Activities of the National Mining Research Institutes of ECE countries and exchange of scientific, technical and economic information relating to the coal industry, 12:19929 (R;XU)
Activities of the National Mining Research Institutes of ECE countries and exchange of scientific, technical and economic information relating to the coal industry, 12:19942 (R;XU)
Activities of the National Mining Research Institutes of ECE countries and exchange of scientific, technical and economic information relating to the coal industry, 12:19941 (R;XU)
Activities of the National Mining Research Institute of ECE countries and exchange of scientific, technical and economic information relating to the coal industry, 12:19935 (R;XU)
Authority and responsibility of advisory bodies and project assessment procedures to support decisions on research and development priorities and programmes, 12:19955 (R;XU)
Authority and responsibility of advisory bodies and project assessment procedures to support decisions on research and development priorities and programs, 12:19952 (R;XU)
Authority and responsibility of advisory bodies and project assessment procedures to support decisions on research and development priorities and programs, 12:19953 (R;XU)
Authority and responsibility of advisory bodies and project assessment procedures, to support decisions on research and development priorities and programmes, 12:19954 (R;XU)
Authority and responsibility of advisory bodies and project assessment procedures to support decisions on research and development priorities and programmes, 12:19948 (R;XU)
Water Pollution
Economic-impact analysis of R84-29 mine-related water-pollution regulations, 12:19925 (R;US)
COAL PREPARATION
Cost Benefit Analysis
Bench-scale combustion characterization of cleaned Kentucky No. 9 coals: Final report, 12:19963 (R;US)
Combustion characterization of the Kentucky No. 9 cleaned coals: Final report, 12:19892 (R;US)
Research Programs
Activities of the National Mining Research Institutes of ECE countries and exchange of scientific, technical and economic information relating to the coal industry, 12:19929 (R;XU)
Activities of the National Mining Research Institutes of ECE countries and exchange of scientific, technical and economic information relating to the coal industry, 12:19894 (R;XU)
Activities of the National Mining Research Institutes of ECE countries and exchange of scientific, technical and economic information relating to the coal industry, 12:19941 (R;XU)
Activities of the National Mining Research Institute of ECE countries and exchange of scientific, technical and economic information relating to the coal industry, 12:19940 (R;XU)

Activities of the National Mining Research Institute of ECE countries and exchange of scientific, technical and economic information relating to the coal industry, 12:19935 (R;XU)
Authority and responsibility of advisory bodies and project assessment procedures to support decisions on research and development priorities and programmes, 12:19895 (R;XU)
Authority and responsibility of advisory bodies and project assessment procedures, to support decisions on research and development priorities and programmes, 12:19954 (R;XU)
Consideration of the activities of the National Mining Research Institutes of ECE countries and exchange of scientific, technical and economic information relating to the coal industry, 12:19893 (R;XU)
**Test Facilities**
Bench-scale combustion characterization of cleaned Kentucky No. 9 coals: Final report, 12:19963 (R;US)
Combustion characterization of the Kentucky No. 9 cleaned coals: Final report, 12:19892 (R;US)
**COAL PRODUCING DISTRICTS**
**Revegetation**
Revegetation of the Helmstedt brown-coal mining area. A contribution in landscape planning and economy, 12:21126 (R;DE;In German)
**COAL TAR**
**Chemical Reaction Yield**
Studies of initial reaction steps in the gasification of coal: Final report, October 1983-September 1985, 12:19898 (R;US)
**Extraction**
Computer-assisted qualitative and quantitative analyses of energy-related complex mixtures, 12:19912 (R;US)
**Infrared Spectra**
Studies of initial reaction steps in the gasification of coal: Final report, October 1983-September 1985, 12:19898 (R;US)
**COAL-DERIVED LIQUIDS**
*See COAL LIQUIDS*
**COAL-FIRED GAS TURBINES**
*Previous to February 1980 this concept was indexed to GAS TURBINES.*
**Corrosion**
Alkali species characterization for coal-fueled gas turbine: Final report, 12:20310 (R;US)
**Erosion**
Alkali species characterization for coal-fueled gas turbine: Final report, 12:20310 (R;US)
**COAL-FIRED MHD GENERATORS**
**Combustors**
Slagging coal combustors for MHD applications, 12:20480 (BA;US)
**Design**
Slagging coal combustors for MHD applications, 12:20480 (BA;US)
**COAL-OIL MIXTURES**

COLLIDING BEAMS
Reviews
$e^+$ e/sub -/ colliders, 12:20952 (BA;US)
COLLISION INTEGRALS
Pade Approximation
Operational method for the particle slowing down problem, 12:21787 (R;XA)
COLLISIONAL PLASMA
Ambipolar Diffusion
Neoclassical transport in stellarators, 12:21935 (J;US)
Diffusion
Diffusion in a quiet plasma and enhanced heating and diffusion in a turbulent plasma, 12:21943 (D;US)
Distribution Functions
Neoclassical transport in stellarators, 12:21935 (J;US)
Electromagnetic Radiation
Collisional effects on kinetic electromagnetic modes and associated quasilinear transport, 12:21933 (J;US)
Electron Collisions
Collisional effects on kinetic electromagnetic modes and associated quasilinear transport, 12:21933 (J;US)
Lower Hybrid Heating
Diffusion in a quiet plasma and enhanced heating and diffusion in a turbulent plasma, 12:21943 (D;US)
Plasma Simulation
Plasma transport near material boundaries, 12:21954 (BA;US)
Potentials
Neoclassical transport in stellarators, 12:21935 (J;US)
Transport Theory
Plasma transport near material boundaries, 12:21954 (BA;US)
Trapping
Neoclassical transport in stellarators, 12:21935 (J;US)
COLLISIONS
*For low-energy interactions involving photons, electrons, ions, atoms, and molecules; not for NUCLEAR REACTIONS; for elementary particles and radiations see also INTERACTIONS.*
*See also ATOM COLLISIONS*
*MOLECULE COLLISIONS*
Hydrogen Transfer
Phenomenological manifestations of large-curvature tunneling in hydride-transfer reactions, 12:20812 (R;US)
COLORADO
Military Facilities
Installation-restoration program Phase II - confirmation/quantification Stage 1 for Air Force Plant PJKS, Waterton, Colorado. Volume 1. Final report, October 1985-October 1986, 12:21117 (R;US)
Installation-restoration program Phase II - confirmation/quantification Stage 1 for Air Force Plant PJKS, Waterton, Colorado. Volume 2. Final report, October 1985-October 1986, 12:21118 (R;US)
COLORADO RIVER BASIN
Geology
Impact of low permeable marine strata on groundwater and stream salinity in the upper Colorado River basin, 12:21256 (RA;US)
Hydrology
Impact of low permeable marine strata on groundwater and stream salinity in the upper Colorado River basin, 12:21256 (RA;US)
Water Chemistry
Impact of low permeable marine strata on groundwater and stream salinity in the upper Colorado River basin, 12:21256 (RA;US)

COMBINED STEAM-POWER GENERATION
*See COGENERATION*
COMBINED-CYCLE POWER PLANTS
*Prior to March, 1976, the descriptors COMBINED CYCLES and FOSSIL-FUEL POWER PLANTS or THERMAL POWER PLANTS were used for indexing this concept.*
Computerized Simulation
Analysis of the off-design performance and phased construction of integrated-gasification-combined-cycle power plants: Volume 2, Models and procedures: Final report (At design, off-design and part-load conditions), 12:20312 (R;US)
Analysis of the off-design performance and phased construction of integrated-gasification-combined-cycle power plants: Volume 1, Results and conclusions: Final report (Steady-state design, off-design and part-load conditions), 12:20311 (R;US)
Construction
Analysis of the off-design performance and phased construction of integrated-gasification-combined-cycle power plants: Volume 2, Models and procedures: Final report (At design, off-design and part-load conditions), 12:20312 (R;US)
Design
Analysis of the off-design performance and phased construction of integrated-gasification-combined-cycle power plants: Volume 2, Models and procedures: Final report (At design, off-design and part-load conditions), 12:20312 (R;US)
Performance
Analysis of the off-design performance and phased construction of integrated-gasification-combined-cycle power plants: Volume 2, Models and procedures: Final report (At design, off-design and part-load conditions), 12:20312 (R;US)
Thermodynamics
Analysis of the off-design performance and phased construction of integrated-gasification-combined-cycle power plants: Volume 2, Models and procedures: Final report (At design, off-design and part-load conditions), 12:20312 (R;US)
COMBUSTION CHAMBERS
Heat Flux
Dual-throat thruster thermal model. Final report, 12:20937 (R;US)
Heat Transfer
Enhanced heat transfer combustor technology, subtasks 1 and 2, test C.1. Interim report, 12:20936 (R;US)
Pressure Measurement
Measurement of pressure fluctuations on the wall of a turbulent combustion furnace. Final report, 12:20938 (R;FR;In French)
Turbulent Flow
Measurement of pressure fluctuations on the wall of a turbulent combustion furnace. Final report, 12:20938 (R;FR;In French)
COMBUSTION PRODUCTS
Air Pollution Abatement
Sulfur emissions from combustion of residual fuel oil based on EEC energy demand and supply, 1980-2000, 12:19990 (R;US)
Organic Nitrogen Compounds
Supercritical fluid chromatography of polar organic compounds in combustion particulates. Progress report, 28 September 1984-28 December 1985, 12:21070 (R;US)
Organic Wastes
Report for non-flame hazardous-waste thermal destruction. Final report, January 1985-July 1986, 12:21085 (R;US)

**Polycyclic Aromatic Hydrocarbons**
Supercritical fluid chromatography of polar organic compounds in combustion particulates. Progress report, 28 September 1984-28 December 1985, 12:21070 (R;US)
**Waste Disposal**
Report for non-flame hazardous-waste thermal destruction. Final report, January 1985-July 1986, 12:21085 (R;US)

**COMMERCIAL BUILDINGS**
**Energy Conservation**
Ventilation control by measurement of carbon dioxide levels in public entertainment buildings. A demonstration in a cinema and a bingo and social club operated by Rank Organisation plc. Final Report, 12:20486 (R;GB)
**Energy Efficiency**
The measured energy performance of many, many buildings, 12:20490 (BA;US)
**Retrofitting**
Solar rehabilitation in urban area, 12:20259 (RA;GB)

**COMPACT TORUS**
*Prior to October 1982, this concept was indexed to THERMONUCLEAR DEVICES or to a particular experiment if known, e.g., REVERSE-FIELD PINCH.*
**Plasma Confinement**
Confinement and heating of high beta plasmas with emphasis on compact toroids: Task 2, Stellarator and heliac research: Annual report, October 1, 1985-September 30, 1986, 12:21844 (R;US)
**Plasma Heating**
Confinement and heating of high beta plasmas with emphasis on compact toroids: Task 2, Stellarator and heliac research: Annual report, October 1, 1985-September 30, 1986, 12:21844 (R;US)
**Reviews**
Experimental and theoretical investigations of compact toroid configurations with large-orbit particles, 12:21981 (RA;AU)

**COMPACTS**
**Grain Size**
Relative effects of porosity and grain size on ultrasonic wave propagation in iron compacts, 12:20590 (BA;US)
**Porosity**
Relative effects of porosity and grain size on ultrasonic wave propagation in iron compacts, 12:20590 (BA;US)
**Ultrasonic Testing**
Relative effects of porosity and grain size on ultrasonic wave propagation in iron compacts, 12:20590 (BA;US)

**COMPARATOR CIRCUITS**
*Circuits to provide indication of agreement or disagreement between signals.*
**Design**
Phase comparator apparatus and method, 12:20933 (P;US)
**Operation**
Phase comparator apparatus and method, 12:20933 (P;US)

**COMPLEX TERRAIN**
**Atmospheric Circulation**
Behavior of smokes and agents during variable meteorological conditions over complex terrain. Final report, 15 November 1982-31 May 1986, 12:21058 (R;US)
**Meteorology**
Experimental investigation of atmospheric dispersion over complex terrain in a prealpine region (experiment SIESTA), 12:21053 (R;DE)

**COMPOSITE MATERIALS**
*See also CERMETS*
**Chemical Vapor Deposition**
Improved fiber-reinforced SiC composites fabricated by chemical vapor infiltration, 12:20704 (BA;US)
**Fabrication**
Fiber wetting and coatings for composite fabrication. Technical report, 12:20652 (R;US)
Improved fiber-reinforced SiC composites fabricated by chemical vapor infiltration, 12:20704 (BA;US)
**Fracture Properties**
Study of the nature of fracture failure in composite materials. Final report, 1 May 1985-31 August 1986, 12:20655 (R;US)
**Mechanical Properties**
Improved fiber-reinforced SiC composites fabricated by chemical vapor infiltration, 12:20704 (BA;US)
**Porosity**
Effects of porosity on polar backscatter from fiber reinforced composites, 12:20698 (BA;US)
Variations in ultrasonic backscatter attributed to porosity, 12:20699 (BA;US)
**Ultrasonic Testing**
Effects of porosity on polar backscatter from fiber reinforced composites, 12:20698 (BA;US)
Elastic wave propagation through the interface between two generally anisotropic materials, 12:20700 (BA;US)
Variations in ultrasonic backscatter attributed to porosity, 12:20699 (BA;US)

**COMPOUND PARABOLIC CONCENTRATORS**
**Parabolic Reflectors**
Maximally concentrating optics for solar electricity generation, 12:20286 (BA;US)

**COMPOUNDS (ORGANIC)**
*See ORGANIC COMPOUNDS*

**COMPRESSION**
**Electric Conductivity**
Nothing, that pretended to be metal: Who held back development of an important direction in physics for a decade and how, 12:20529 (TJ;US)

**COMPRESSORS**
**Efficiency**
High-efficiency axial compressor: Final report, 12:20505 (R;US)
**Unsteady Flow**
Calculation of the unsteady flow in vaneless diffusers by the partially-parabolic method, 12:21741 (R;XA)

**COMPUTED TOMOGRAPHY**
*See COMPUTERIZED TOMOGRAPHY*

**COMPUTER ARCHITECTURE**
Serial-bus architecture for parallel-processing systems. Master's thesis, 12:22055 (R;US)

**COMPUTER CODES**
*Computer codes are indexed by their initial letter and CODES, e.g., A CODES. If the code name begins with a number the code is indexed to NUMBER CODES.*
*See also A CODES*
*M CODES*
*S CODES*
*T CODES*
**I Codes**
ISOLA IV - a FORTRAN 77 code for the calculation of the long-term dose distribution in the environment of nuclear installations, 12:21107 (R;DE;In German)
**T Codes**
TENSOR: A code for computation of the relativistic high frequency conductivity tensor for a magnetized plasma with arbitrary electron distribution function in the "temperature" range of 50-500 KeV: Final report, 12:21929 (R;US)

**COMPUTER LANGUAGES**
*See PROGRAMMING LANGUAGES*

**COMPUTER NETWORKS**
**Data Processing**
Development of programming techniques for SIMD computers. Annual progress report No. 2, 12:22054 (R;US)
**Security**

**COPPER**
**Acoustic Testing**
Absolute acoustoelastic measurements of stress in textured plate with arbitrary stress orientations, 12:20592 (BA;US)
**Autoionization**
Summary abstract: autoionization emission from transition metals: an electron stimulated analog of resonant photoemission, 12:20607 (J;US)
**Corrosion**
Electron-number diagram for study of corrosion processes. Final report, 1 August 1984-31 July 1986, 12:20531 (R;US)
**Electronic Structure**
Electronic and magnetic properties of the fcc Fe(001) thin films: Fe/Cu(001) and Cu/Fe/Cu(001), 12:20571 (J;US)
New observation of two-hole core-level satellites in copper, silver, and gold, 12:20606 (J;US)
Summary abstract: autoionization emission from transition metals: an electron stimulated analog of resonant photoemission, 12:20607 (J;US)
Summary abstract: unoccupied surface states on Cu(100) and Cu(111) studied by inverse photoemission, 12:20601 (J;US)
**Emission Spectroscopy**
Spectrographic determination of impurities in beryllium oxide, 12:20730 (R;BR;In Portuguese)

**Frenkel Defects**
Evaluation of defect production cross sections and calculated fission-fusion neutron spectrum sensitivity, 12:20548 (R;US)
**Magnetic Properties**
Electronic and magnetic properties of the fcc Fe(001) thin films: Fe/Cu(001) and Cu/Fe/Cu(001), 12:20571 (J;US)
**Oxidation**
The formation of multilayer scales on pure metals, 12:20575 (J;US)
**Physical Radiation Effects**
Elastic waves induced in a semi-infinite body with cover by a pulse radiation, 12:21436 (RA;SU;In Russian)
Ion-beam-mixing in metal-metal systems and metal-silicon systems, 12:20617 (D;US)
The effects of low doses of 14 MeV neutrons on the properties of various commercial copper alloys, 12:20547 (R;US)
**Positron Collisions**
Positronium time-of-flight spectroscopy of dissimilar metals, 12:20555 (J;US)
**Scaling**
The formation of multilayer scales on pure metals, 12:20575 (J;US)
**Sorptive Properties**
The nature of the copper in a Cu/alumina sorbent used in SO/sub 2/ removal from flue gas, 12:21099 (J;US)
**Sound Waves**
Elastic waves induced in a semi-infinite body with cover by a pulse radiation, 12:21436 (RA;SU;In Russian)
**Stress Analysis**
Absolute acoustoelastic measurements of stress in textured plate with arbitrary stress orientations, 12:20592 (BA;US)
**Swelling**
Swelling of pure copper and copper alloys after high fluence irradiation in FFTF [Fast Flux Test Facility] at approximately 450°C, 12:20542 (R;US)
**Tensile Properties**
Effects of low doses of 14-MeV neutrons on the tensile properties of three binary copper alloys, 12:20545 (R;US)
The effects of low doses of 14 MeV neutrons on the properties of various commercial copper alloys, 12:20547 (R;US)
**Water Pollution**
Seasonal variability in Prickly Pear Creek water quality and macroinvertebrate communities, 12:21130 (R;US)
**Work Functions**
Positronium time-of-flight spectroscopy of dissimilar metals, 12:20555 (J;US)

**COPPER ALLOYS**
*See also COPPER BASE ALLOYS*
**Electric Conductivity**
Strong electronic correlations in a new class of Yb-based compounds: $YbXCu_4$ (X = Ag,Au,Pd), 12:20566 (J;US)
**Electron Correlation**
Strong electronic correlations in a new class of Yb-based compounds: $YbXCu_4$ (X = Ag,Au,Pd), 12:20566 (J;US)
**Electronic Specific Heat**
Formation and destruction of the heavy-electron ground state in U compounds with $AuBe_5$ crystal structure, 12:20573 (J;US)
**Electronic Structure**
Formation and destruction of the heavy-electron ground state in U compounds with $AuBe_5$ crystal structure, 12:20573 (J;US)
**Magnetic Susceptibility**
Strong electronic correlations in a new class of Yb-based compounds: $YbXCu_4$ (X = Ag,Au,Pd), 12:20566 (J;US)
**Specific Heat**
Strong electronic correlations in a new class of Yb-based compounds: $YbXCu_4$ (X = Ag,Au,Pd), 12:20566 (J;US)
**Sputtering**
The sputtering and redeposition behaviour of $VBe_{12}$ compound and of Ti-Cu-Li composites within a fusion tokamak environment, 12:21979 (R;US)

**COPPER BASE ALLOYS**
**Crack Propagation**
Correlation between decomposition structure and fatigue crack propagation in a copper-nickel-chromium alloy, 12:20539 (R;DE;In German)
**Fatigue**
Correlation between decomposition structure and fatigue crack propagation in a copper-nickel-chromium alloy, 12:20539 (R;DE;In German)
**Microstructure**
Correlation between decomposition structure and fatigue crack propagation in a copper-nickel-chromium alloy, 12:20539 (R;DE;In German)
**Physical Radiation Effects**
The effects of low doses of 14 MeV neutrons on the properties of various commercial copper alloys, 12:20547 (R;US)
**Swelling**
Swelling of pure copper and copper alloys after high fluence irradiation in FFTF [Fast Flux Test Facility] at approximately 450°C, 12:20542 (R;US)
**Tensile Properties**
Effects of low doses of 14-MeV neutrons on the tensile properties of three binary copper alloys, 12:20545 (R;US)
The effects of low doses of 14 MeV neutrons on the properties of various commercial copper alloys, 12:20547 (R;US)

**COPPER OXIDES**
**Chemical Reaction Kinetics**
Hydrogen interactions with oxides in metals: An ion-beam study, 12:20638 (R;US)
**Deposition**
Selective surfaces of high performance and low cost solar collectors, 12:20279 (R;BR)
**Ion Implantation**
Hydrogen interactions with oxides in metals: An ion-beam study, 12:20638 (R;US)
**Sorptive Properties**
Sorbent attrition in the CuO process, 12:21098 (J;US)
The nature of the copper in a Cu/alumina sorbent used in SO/sub 2/ removal from flue gas, 12:21099 (J;US)

**COPPER SELENIDE SOLAR CELLS**
**Fabrication**
Potential health and safety hazards associated with the manufacture of amorphous silicon and copper indium diselenide photovoltaic cells, 12:20239 (BA;US)
**Health Hazards**
Potential health and safety hazards associated with the manufacture of amorphous silicon and copper indium diselenide photovoltaic cells, 12:20239 (BA;US)
**Occupational Safety**
Potential health and safety hazards associated with the manufacture of amorphous silicon and copper indium diselenide photovoltaic cells, 12:20239 (BA;US)

**COPPER SELENIDES**

Spacecraft in the magnetospheric environment. Final report, 9 November 1981-10 May 1985, 12:21410 (R;US)
Ring Currents
Eigenfunction methods in magnetospheric radial-diffusion theory. Technical report, 12:21409 (R;US)
Solar Wind
Electron cyclotron harmonic waves observed by the AMPTE-IRM (active magnetospheric particle tracer explorers-ion release module) plasma wave experiment following a lithium release in the solar wind. Technical report, 12:21404 (R;US)
EARTH PLANET
*See also NORTHERN HEMISPHERE*
Neutral-Particle Transport
Effect of transmission through the Earth on neutrino oscillations, 12:21552 (J;US)
EARTHMOVING EQUIPMENT
Automation
Improvement of reliability of opencast mining techniques in difficult geological, mining and climatic conditions, 12:19946 (R;XU)
EARTHQUAKES
*See also MICROEARTHQUAKES*
Seismic Effects
Surface ruptures east of Mexicali from the Imperial Valley earthquake of 15 October 1979, 12:20298 (J;US)
EBR-2 REACTOR
Reactor Operation
Experimental breeder reactor-II: 20 yr of operating experience, 12:20446 (J;US)
Reactor Safety
Experimental breeder reactor-II: 20 yr of operating experience, 12:20446 (J;US)
ECOLOGY
Global Aspects
Global change in the geosphere-biosphere: Initial priorities for an IGBP [International Geosphere-Biosphere Program: Final report], 12:21113 (R;US)
Research Programs
Global change in the geosphere-biosphere: Initial priorities for an IGBP [International Geosphere-Biosphere Program: Final report], 12:21113 (R;US)
ECR HEATING
Axial electric field driven by temperature anisotropy in a bumpy torus equilibrium, 12:21913 (R;JP)
M Codes
One-dimensional transport codes MAKOKOT. Presentation and directions for use, 12:21862 (R;FR;In French)
Mirrors
Generalized network representation of twist-reflectors, 12:21977 (R;FR)
Polarization
Generalized network representation of twist-reflectors, 12:21977 (R;FR)
ECUADOR
Energy Policy
Ecuador - energy situation 1985/1986, 12:20467 (R;DE;In German)
Energy Supplies
Ecuador - energy situation 1985/1986, 12:20467 (R;DE;In German)
EDDY CURRENT TESTING
Automation
Automatic appraisal of defects in irradiated pins by eddy current testing, 12:20915 (R;FR;In French)
EDUCATIONAL FACILITIES
Calculation of neutron field distortion in a reactor on control rod displacement (IGR code), 12:20378 (R;SU;In Russian)
Air Pollution Control
Removal of sulfur dioxide from a simulated museum atmosphere using carbon filters, 12:21066 (R;US)
Information Dissemination
University efforts in the technology transfer process, 12:20925 (BA;US)
EFFLUENTS (CHEMICAL)
*See CHEMICAL EFFLUENTS*
EFFLUENTS (GASEOUS)
*See GASEOUS WASTES*
EFFLUENTS (RADIOACTIVE)
*See RADIOACTIVE EFFLUENTS*
EFFUSION
*See DIFFUSION*
EGYPTIAN ARAB REPUBLIC
Hydrology
Hydrogeology of the Gebel Uweinat - Aswan uplift system, eastern Sahara, 12:21253 (RA;US)
EHF RADIATION
*See MICROWAVE RADIATION*
EINSTEIN-MAXWELL EQUATIONS
Symmetry Breaking
Spontaneous breaking of global and local symmetries in six-dimensional Einstein-Maxwell-$\sigma$ theory, 12:21588 (R;XA)
ELASTIC PROPERTIES
*See ELASTICITY*
ELASTIC SCATTERING
*See also POTENTIAL SCATTERING*
Giant Resonance
Influence of the giant dipole resonance structure on elastic gamma-ray scattering from /sup 209/Bi, 12:21731 (RA;IL)
ELASTICITY
Measuring Instruments
Characterizing the hardness and modulus of thin films using a mechanical properties microprobe, 12:20916 (R;US)
ELASTOMERS
*See also RUBBERS*
Elasticity
Influence of notch depth on tearing morphology and tearing energy in carbon-black-loaded SBR [styrene butadiene rubber], 12:20664 (R;US)
Fractography
Influence of notch depth on tearing morphology and tearing energy in carbon-black-loaded SBR [styrene butadiene rubber], 12:20664 (R;US)
Fracture Mechanics
Influence of notch depth on tearing morphology and tearing energy in carbon-black-loaded SBR [styrene butadiene rubber], 12:20664 (R;US)
Morphology
Influence of notch depth on tearing morphology and tearing energy in carbon-black-loaded SBR [styrene butadiene rubber], 12:20664 (R;US)
ELECTRIC BATTERIES
*Devices for production and/or storage of electrical energy from chemical reactions; excludes FUEL CELLS and RADIOISOTOPE BATTERIES.*
Design
Design and development of a multi-kilowatt hour hydrogen/nickel oxide battery, 12:20448 (R;US)
ELECTRIC CONDENSERS
*See CAPACITORS*
ELECTRIC CONDUCTIVITY
*See also PHOTOCONDUCTIVITY*
Analytical Solution
Diffusion of magnetic fields into conductors of nonuniform resistivity, 12:21808 (J;US)

**Electron Spin Resonance**
ESR studies in semiconductor-insulator two-layer structures, 12:21725 (RA;IL)
**Experimental Data**
Dc electrical resistivity and upper critical magnetic field of superconducting ternary silicides and germanides with the $Sc_8Co_4Si$/sub 10/-type structure, 12:20669 (J;US)
**Superconductors**
Dc electrical resistivity and upper critical magnetic field of superconducting ternary silicides and germanides with the $Sc_8Co_4Si$/sub 10/-type structure, 12:20669 (J;US)

**ELECTRIC CONDUCTORS**
**Electric Conductivity**
Diffusion of magnetic fields into conductors of nonuniform resistivity, 12:21808 (J;US)
**Electrostatics**
Diffusion of magnetic fields into conductors of nonuniform resistivity, 12:21808 (J;US)
**Magnetic Fields**
Diffusion of magnetic fields into conductors of nonuniform resistivity, 12:21808 (J;US)

**ELECTRIC RESISTIVITY**
*See ELECTRIC CONDUCTIVITY*

**ELECTRIC UTILITIES**
**Data Compilation**
Financial statistics of selected electric utilities, 1985, 12:20471 (R;US)
**Energy Management**
Survey of utility lighting programs: Final report, 12:20474 (R;US)
**Financial Data**
Financial statistics of selected electric utilities, 1985, 12:20471 (R;US)
**Lighting Systems**
Survey of utility lighting programs: Final report, 12:20474 (R;US)
**Load Management**
Cost-benefit analysis of demand-side planning alternatives: Final report, 12:20473 (R;US)
Demand-side planning program: Projects and products, 1974-1986, 12:20472 (R;US)
Residential hybrid power for load leveling and efficiency gains: A concept overview, 12:20319 (R;US)
**Planning**
Demand-side planning program: Projects and products, 1974-1986, 12:20472 (R;US)

**ELECTRICAL CONDUCTIVITY**
*See ELECTRIC CONDUCTIVITY*

**ELECTRICAL INSULATION**
**Damage**
Predamage threshold electron emission from insulator and semiconductor surfaces, 12:20880 (BA;US)
**Electron Emission**
Predamage threshold electron emission from insulator and semiconductor surfaces, 12:20880 (BA;US)
**Thermal Expansion**
Thermal expansion of epoxy-fiberglass composite specimens, 12:20629 (R;US)
**Thermionic Emission**
Predamage threshold electron emission from insulator and semiconductor surfaces, 12:20880 (BA;US)

**ELECTRICAL INSULATORS**
**Breakdown**
A statistical interpretation of the J.C. Martin relationship for breakdown of insulators in vacuum, 12:20966 (R;US)
**Radiolysis**
Diffusion and solubility of oxygen in γ-ray irradiated polymer insulation materials, 12:20659 (R;JP)

**ELECTRICAL RESISTANCE**
*See ELECTRIC CONDUCTIVITY*

**ELECTRICAL RESISTIVITY**
*See ELECTRIC CONDUCTIVITY*

**ELECTRODES**
**Chemical Reactions**
Kinetics and transport processes in aqueous polysulfide electrode reactions, 12:20447 (R;US)
**Mathematical Models**
Iterated three-layer model of the double layer with permanent dipoles, 12:20621 (J;NL)
**Spectral Reflectance**
Electroreflectance spectroscopy of emersed gold electrodes in the vacuum ultraviolet, 12:20787 (D;US)

**ELECTROLUMINESCENCE**
**Temperature Dependence**
Effect of excitation frequency on temperature dependent electroluminescence of ZnS : Cu, Mn : (H), 12:21429 (R;XA)
Temperature dependence of electroluminescent emission from (ZnS : Cu, Mn(H)) type luminophors, 12:21430 (R;XA)

**ELECTROLYTES**
*See also SOLID ELECTROLYTES*
**Chemical Reactions**
Kinetics and transport processes in aqueous polysulfide electrode reactions, 12:20447 (R;US)
**Surface Tension**
Surfactant addition to phosphoric acid electrolyte, 12:20481 (P;US)
**Surfactants**
Surfactant addition to phosphoric acid electrolyte, 12:20481 (P;US)
**Wettability**
Surfactant addition to phosphoric acid electrolyte, 12:20481 (P;US)

**ELECTROMAGNETIC FILTERS**
**Performance Testing**
Application of electromagnetic filtration in nuclear power plants and results of testing prototype filters, 12:20382 (RA;CS;In Czech)

**ELECTROMAGNETIC INTERACTIONS**
**Cross Sections**
Interaction of elementary atoms with matter, 12:21440 (R;SU)

**ELECTROMAGNETIC RADIATION**
*See also BREMSSTRAHLUNG*
*INFRARED RADIATION*
*LASER RADIATION*
*MICROWAVE RADIATION*
*RADIOWAVE RADIATION*
*ULTRAVIOLET RADIATION*
**Inverse Scattering Problem**
Direct and inverse scattering in the time domain for a dissipative wave equation. III. Scattering operators in the presence of a phase velocity mismatch, 12:21811 (J;US)
**Wave Propagation**
Direct and inverse scattering in the time domain for a dissipative wave equation. III. Scattering operators in the presence of a phase velocity mismatch, 12:21811 (J;US)

*See ELECTROMAGNETIC RADIATION*

**ELECTROMAGNETISM**
**Quantization**
Physics with magnetic charges and electric currents, 12:21773 (R;US)

**ELECTRON ACCEPTOR**
*See ELECTRONS*

**ELECTRON ANTINEUTRINOS**
**Neutrino Oscillation**
Neutrino oscillation effect observed near a Bugey PWR reactor, 12:21505 (R;FR;In French)

**ELECTRON BEAM WELDING**
**Welding Machines**
Method of beam welding metallic parts together and apparatus for doing same, 12:20568 (P;US)

**ELECTRON BEAMS**
**Beam Currents**
Laser-based foilless diode, 12:21455 (J;US)
**Electron Sources**
Laser-based foilless diode, 12:21455 (J;US)
**Focusing**
Laser-based foilless diode, 12:21455 (J;US)

**ELECTRON CYCLOTRON MASERS**
*See MICROWAVE AMPLIFIERS*

**ELECTRON CYCLOTRON-RESONANCE HEATING**
*See ECR HEATING*
**ELECTRON DENSITY**
**Interferometry**
Intelligent data recorder, 12:21920 (R;JP;In Japanese)
**Mathematical Models**
Development of techniques for the use of DMSP (Defense Meteorological Satellite Program) SSIE (Topside Ionospheric Plasma Monitor) data in the AWS (Air Weather Service) 4d ionosphere model. Technical report, 12:21407 (R;US)
**ELECTRON DONOR**
*See ELECTRONS*
**ELECTRON DOSIMETRY**
**Calibration**
Electron radiation dosimetry, 12:20985 (RA;CS;In Czech)
**Calorimetric Dosemeters**
Electron radiation dosimetry, 12:20985 (RA;CS;In Czech)
**Chemical Dosemeters**
Electron radiation dosimetry, 12:20985 (RA;CS;In Czech)
**ELECTRON GUNS**
**Cooling**
Water cooled electron gun focused at 90deg, 270deg, 12:20955 (RA;IL)
**ELECTRON MICROSCOPES**
**Design**
New scanning transmission electron microscope microanalytical system, 12:21039 (J;US)
**Operation**
New scanning transmission electron microscope microanalytical system, 12:21039 (J;US)
**Performance**
New scanning transmission electron microscope microanalytical system, 12:21039 (J;US)
**ELECTRON NEUTRINOS**
*See also ELECTRON ANTINEUTRINOS*
**Neutrino Oscillation**
Detailed MSW calculations for solar $^8$B neutrinos: Probabilities for electron neutrinos to remain electron neutrinos at earth as a function of energy, DELTA m$^2$, and sin/sup 2/2theta, 12:21298 (R;US)
**ELECTRON PAIRS**
**Pair Production**
Analysis of e/sup +/e/sup -/ pair production in experiments with neutral kaons, 12:21536 (RA;SU;In Russian)
**ELECTRON PROBES**
**Technology Assessment**
Probes for plasma edge diagnostics in magnetic confinement fusion devices, 12:21953 (BA;US)
**ELECTRON REACTIONS**
**Deep Inelastic Scattering**
Future experiments on QCD effects in few nucleon systems with high energy electrons, 12:21676 (R;DE)
**Inelastic Scattering**
Formal framework for the electroproduction of polarized nucleons from nuclei, 12:21681 (J;US)
**ELECTRONIC DATA PROCESSING**
*See DATA PROCESSING*

Civil defense shelters: A state-of-the-art assessment, 1986, 12:22082 (R;US)
**Performance Testing**
Civil defense shelters: A state-of-the-art assessment, 1986, 12:22082 (R;US)

**FAST REACTORS**
**Fuel Cycle**
Technical, physics and optimization calculations of fast breeder reactor and its fuel cycle, 12:20365 (RA;CS;In Czech)
**Optimization**
Technical, physics and optimization calculations of fast breeder reactor and its fuel cycle, 12:20365 (RA;CS;In Czech)
**Research Programs**
Scientific conference proceedings. Session 1. Nuclear power engineering, 12:20351 (R;CS;In Czech)

**FASTBUS SYSTEM**
**Specifications**
Review of the status of the FASTBUS standard routine specification, 12:22059 (R;US)

**FEDERAL REGION VI**
*Prior to June 1982 this concept was indexed to SOUTHWEST REGION.*
*See also NEW MEXICO*
*TEXAS*
**Biomass Plantations**
Resource evaluation and site selection for bioenergy production systems, 12:20241 (BA;US)

**FEDERAL REPUBLIC OF GERMANY**
**Energy Consumption**
Data on the development of the West German energy industry in 1985, 12:20477 (R;DE;In German)
**Energy Supplies**
Data on the development of the West German energy industry in 1985, 12:20477 (R;DE;In German)
**Nuclear Power Phaseout**
Consequences of a withdrawal from the use of nuclear energy, 12:20459 (R;DE;In German)
**Reactor Operators**
Qualification, training, licensing and retraining of operating shift personnel in nuclear power plants. Presentation of different procedures in the countries of the European Community, Spain, Sweden, Switzerland and the USA, 12:20324 (R;FR)
**Research Programs**
Activities of the National Mining Research Institute of ECE countries and exchange of scientific, technical and economic information relating to the coal industry, 12:19935 (R;XU)
Authority and responsibility of advisory bodies and project assessment procedures to support decisions on research and development priorities and programmes, 12:19955 (R;XU)
**Underground Mining**
Drivage, development and support of roadways and faces in deep mines and, consequently, in more difficult mining, geological and atmospheric conditions, 12:19932 (R;XU)

**FERMIONS**
*See also BARYONS*
*LEPTONS*
**Decay**
Helicity projection techniques for evaluating cross sections of heavy-fermion production and decay via W bosons, 12:21554 (J;US)
**Particle Production**
Helicity projection techniques for evaluating cross sections of heavy-fermion production and decay via W bosons, 12:21554 (J;US)

**FERRIC COMPOUNDS**
*See IRON COMPOUNDS*

**FERRITE GARNETS**
**Moessbauer Effect**
Study of distant magnetic order effect on Fesup(3+) cation vibrations in Usub(3)Fesub(5-x)Gdsub(x)Osub(12) ferrite garnets by NGR method, 12:21746 (RA;SU;In Russian)

**FERRITES**
*Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.*
**Ferromagnetic Resonance**
Behaviour of frequences of antiferromagnetic resonance in YFeO/sub 3/ in magnetic field, 12:21744 (RA;SU;In Russian)
**Neutron Diffraction**
Neutron diffraction study of Ba(TiCo)/sub 2/Fe/sub 8/O/sub 19/ magnetic structure, 12:21750 (R;SU;In Russian)

**FERRITIC STEELS**
**Physical Radiation Effects**
Transmutations in fusion test facilities, 12:20541 (R;US)

**FERROUS COMPOUNDS**
*See IRON COMPOUNDS*

**FETUSES**
**Death**
Genetic injury in hybrid male mice exposed to low doses of $^{60}$Co $\gamma$-rays or fission neutrons. 2. Dominant lethal mutation response to long-term weekly exposures, 12:21207 (J;NL)

**FIBER OPTICS**
**Waveguides**
Liquid-core fiber optics: Transmission and nonlinear effects, 12:20809 (R;US)

**Resonance**
Observation of resonant transfer and excitation to specific LS-coupled states in O/sup 5+/+He collisions by high-resolution, 0° Auger-electron spectroscopy, 12:21467 (J;US)
**ION-DRAG ACCELERATORS**
*See ELECTRON-RING ACCELERATORS*
**IONIC REACTIONS**
*See CHEMICAL REACTIONS IONS*
**IONIZATION**
**Plasma**
Non-equilibrium excitation phenomena near the plasma-substrate surface in a low pressure microwave plasma, 12:21867 (RA;IL)
**IONIZATION CALORIMETERS**
*See SHOWER COUNTERS*
**IONIZATION LOSS**
*See ENERGY LOSSES*
**IONIZING RADIATIONS**
*See also COSMIC RADIATION*
**Dose Equivalents**
Estimation of effective dose equivalents from external irradiations, 12:21714 (R;BR;In Portuguese)
**Measuring Methods**
Estimation of effective dose equivalents from external irradiations, 12:21714 (R;BR;In Portuguese)
**IONOSPHERE**
*See also F REGION*
**Disturbances**
Propagation of rf signals through structured ionization. Theory and antenna-aperture-effect applications. Technical report, 1 March 1985-1 May 1986, 12:21047 (R;US)
**Electron Density**
Development of techniques for the use of DMSP (Defense Meteorological Satellite Program) SSIE (Topside Ionospheric Plasma Monitor) data in the AWS (Air Weather Service) 4d ionosphere model. Technical report, 12:21407 (R;US)
**Wave Propagation**
Ionospheric Communications Analysis and Prediction Program (IONCAP) (for microcomputers). Software, 12:21413 (R;US)
Propagation of rf signals through structured ionization. Theory and antenna-aperture-effect applications. Technical report, 1 March 1985-1 May 1986, 12:21047 (R;US)
**IONS**
*Ions in solutions are indexed as compounds; ions in gases by the precoordinated descriptor consisting of the element name and the term ions; ions in beams by assigning either the specific name if available, e.g. ARGON 40 BEAMS*
*See also ALUMINIUM IONS*
*ARGON IONS*
*BORON IONS*
*CADMIUM IONS*
*CALCIUM IONS*
*CARBON IONS*
*CESIUM IONS*
*CHLORINE IONS*

**Alignment**
Spontaneous alignment in charged-particle systems. Fixed length vs. micellar situations, 12:21778 (RA;IL)
**Energy Levels**
k ordering of atomic structure, 12:21476 (BA;US)
**Ion Collisions**
Diffusion in a quiet plasma and enhanced heating and diffusion in a turbulent plasma, 12:21943 (D;US)
**IRIDIUM**
**Ecological Concentration**
End of the Cretaceous: sharp boundary or gradual transition, 12:21265 (J;US)

**IRIDIUM 191**
**Radioisotope Generators**
A new osmium-191/iridium-191m generator system, 12:21171 (J;US)
New Os-191/Ir-191m generator for first-pass radionuclide angiography, 12:21161 (RA;IL)
**Yields**
A new osmium-191/iridium-191m generator system, 12:21171 (J;US)
**IRIDIUM ALLOYS**
**Crystallization**
Crystallization study of the $Ta_{55}$—$Ir_{45}$ amorphous alloy, 12:20578 (J;US)
**IRIDIUM COMPLEXES**
**Chemical Preparation**
Synthesis and characterization of (pentamethylcyclopentadienyl)iridium polyhydride and polyphosphine complexes, 12:20748 (R;US)
**Chemical Reactions**
Synthesis and characterization of (pentamethylcyclopentadienyl)iridium polyhydride and polyphosphine complexes, 12:20748 (R;US)
**IRON**
**Absorption Spectroscopy**
Use of electrothermal atomization for determining metallic impurities in nuclearly pure uranium compounds, 12:20728 (R;BR;In Portuguese)
**Autoionization**
Summary abstract: autoionization emission from transition metals: an electron stimulated analog of resonant photoemission, 12:20607 (J;US)
**Corrosion**
Electron-number diagram for study of corrosion processes. Final report, 1 August 1984-31 July 1986, 12:20531 (R;US)
**Dislocations**
Dislocation studies on deformed single crystals of high-purity iron using positron annihilation: determination of dislocation densities, 12:21718 (R;US)
Nondestructive evaluation of dislocations in iron single crystals by positron annihilation, 12:21717 (R;US)
**Electronic Structure**
Electronic and magnetic properties of the fcc Fe(001) thin films: Fe/Cu(001) and Cu/Fe/Cu(001), 12:20571 (J;US)
Summary abstract: autoionization emission from transition metals: an electron stimulated analog of resonant photoemission, 12:20607 (J;US)
**Emission Spectroscopy**
Spectrographic determination of impurities in beryllium oxide, 12:20730 (R;BR;In Portuguese)
**Magnetic Properties**
Electronic and magnetic properties of the fcc Fe(001) thin films: Fe/Cu(001) and Cu/Fe/Cu(001), 12:20571 (J;US)
**Magnetization**
Electronic and magnetic properties of the fcc Fe(001) thin films: Fe/Cu(001) and Cu/Fe/Cu(001), 12:20571 (J;US)
**Oxidation**
The formation of multilayer scales on pure metals, 12:20575 (J;US)
**Physical Radiation Effects**
Mechanisms of interstitial loop formation in metals under low radiation doses, 12:21722 (R;SU;In Russian)
**Scaling**
The formation of multilayer scales on pure metals, 12:20575 (J;US)
**Tensile Properties**
OWR [Omega West reactor]/RTNS-II low exposure spectral effects experiment, 12:20540 (R;US)
**Yield Strength**
OWR [Omega West reactor]/RTNS-II low exposure spectral effects experiment, 12:20540 (R;US)
**IRON ALLOYS**
*See also INCONEL 600*
*IRON BASE ALLOYS*
**Annealing**
Effects of microadditions of cerium on annealing embrittlement in FeBSi glasses, 12:20533 (R;US)
**Crystal Structure**
Fe and Mn sites in noncrystallographic alloy phases of Al-Mn-Fe and Al-Mn-Fe-Si, 12:20562 (J;US)
**Crystal-Phase Transformations**
On the grain-boundary phase in iron rare-earth boron magnets, 12:20554 (J;US)
**Dehydridation**
Heat transfer in iron-titanium hydride beds, 12:20161 (R;US)
**Embrittlement**
Effects of microadditions of cerium on annealing embrittlement in FeBSi glasses, 12:20533 (R;US)
**Grain Boundaries**
On the grain-boundary phase in iron rare-earth boron magnets, 12:20554 (J;US)
**Hydridation**
Heat transfer in iron-titanium hydride beds, 12:20161 (R;US)
**Physical Radiation Effects**
Ultrasonic response of dilute AlFe alloys irradiated with 2.5-MeV electrons, 12:20600 (J;US)
**IRON BASE ALLOYS**
*See also CAST IRON*
*STEELS*
**Charpy Test**
Fusion materials specimens from MOTA-1C FFTF [Fast Flux Test Facility] Cycles 5-6, 12:20544 (R;US)
**Grain Size**
Relative effects of porosity and grain size on ultrasonic wave propagation in iron compacts, 12:20590 (BA;US)
**Ion Implantation**
Effects of P implantation on passivity of Fe—Cr alloys in acidic electrolytes, 12:20579 (J;US)
**Microstructure**
Effects of substitutional alloying elements on microstructural evolution in neutron-irradiated Fe-10Cr, 12:20543 (R;US)
**Passivity**
Effects of P implantation on passivity of Fe—Cr alloys in acidic electrolytes, 12:20579 (J;US)
**Porosity**
Relative effects of porosity and grain size on ultrasonic wave propagation in iron compacts, 12:20590 (BA;US)
**Swelling**
Spinodal-like decomposition of Fe-Ni and Fe-Ni-Cr alloys in both radiation and non-radiation environments, 12:20546 (R;US)
**Ultrasonic Testing**
Relative effects of porosity and grain size on ultrasonic wave propagation in iron compacts, 12:20590 (BA;US)
**IRON CHLORIDES**
**Absorption Spectra**
X-ray-absorption spectra in $KrF_2$ and $FeCl_2$: theory, 12:21471 (J;US)
**Fluctuations**
Transverse fluctuations in an Ising spin-glass: Fe/sub 0.4/Mg/sub 0.6/$Cl_2$, 12:20671 (J;US)
**Magnetic Susceptibility**
Transverse fluctuations in an Ising spin-glass: Fe/sub 0.4/Mg/sub 0.6/$Cl_2$, 12:20671 (J;US)
**IRON COMPLEXES**
**Chemical Preparation**
Structure of $[(eta\text{-}C_5H_5)Fe(CO)_2(CS)]PF_6$, a comparison of M-CS and M-CO bonding, 12:20775 (J;US)
**Molecular Structure**
Structure of $[(eta\text{-}C_5H_5)Fe(CO)_2(CS)]PF_6$, a comparison of M-CS and M-CO bonding, 12:20775 (J;US)
**IRON COMPOUNDS**
*See also FERRITES*
*IRON CHLORIDES*
*IRON HYDRIDES*
*IRON OXIDES*
*IRON SULFIDES*
**Catalytic Effects**
Novel Fischer-Tropsch slurry catalysts and process concepts for selective transportation fuel production: Quarterly technical progress report, 1 January-31 March 1986, 12:19904 (R;US)
**IRON GARNETS**
*See FERRITE GARNETS*

**IRON HYDRIDES**
**Thermal Conductivity**
Heat transfer in iron-titanium hydride beds, 12:20161 (R;US)
**IRON IONS**
**Coordination Number**
Nonadditivity of ab initio pair potentials for molecular dynamics of multivalent transition metal ions in water, 12:20772 (J;US)
**IRON OXIDES**
*See also MAGNETITE*
**Bond Lengths**
Structure and bonding of $F_2O_2$, 12:21448 (J;US)
**Chemical Analysis**
Profile characterization of soil developed on pelitic rocks from the Bambui Group through chemical analysis, X-ray diffraction and Moessbaur spectroscopy (Minas Gerais, Brazil), 12:21115 (R;BR;In Portuguese)
**Chemical Bonds**
Structure and bonding of $F_2O_2$, 12:21448 (J;US)
**Electronic Structure**
Structure and bonding of $F_2O_2$, 12:21448 (J;US)
**Quantitative Chemical Analysis**
Ferric-ferrous ratio of natural silicate liquids equilibrated in air, 12:21288 (J;DE)
**IRON SULFIDES**
**Catalytic Effects**
Low severity coal liquefaction to determine reactivity of coals: Technical progress report No. 2 for period 09/01/86 through 11/30/86, 12:19906 (R;US)
**IRRIGATION**
**Energy Consumption**
Irrigation customer survey procedures and results, 12:20476 (R;US)
**Surveys**
Irrigation customer survey procedures and results, 12:20476 (R;US)
**ISING MODEL**
**Solitons**
Ising models and soliton equations, 12:21823 (RA;SU)
**Spin**
Limiter of critical exponent university, 12:21834 (J;GB)
**ISOBARIC SPIN**
*See ISOSPIN*
**ISOCYANIC ACID**
**Energy Transfer**
Intramolecular energy transfer in the HNC/HCN isomerization reaction: Quasiclassical state specific isomerization rates controlled by localized potential features, 12:20749 (J;US)
**Isomerization**
Intramolecular energy transfer in the HNC/HCN isomerization reaction: Quasiclassical state specific isomerization rates controlled by localized potential features, 12:20749 (J;US)
**ISOMERIC NUCLEI**
**Excitation**
Nuclear excitation by laser driven coherent outer shell electron oscillations, 12:20870 (J;US)
**Superradiance**
Interlevel transfer mechanisms and their application to grasers, 12:20865 (J;US)
**ISOSPIN**
**Conservation Laws**
Isotopic spin conservation and a generalized gauge invariance, 12:21584 (BA;US)
**ISOTOPE DATING**
Clemente and Herminia Hinojosa Site, 41 JW 8: a Toyah horizon campsite in southern Texas. Special report (Final) 1980-1986, 12:21281 (R;US)
**ISOTOPE EFFECTS**
Radiocarbon labeled fully deuterated glucose: Preparation, chromatography and preliminary distribution studies, 12:21155 (J;US)
**ISOTOPE ENRICHMENT**

**JET ENGINE FUELS**
**Carcinogenesis**
Toxicology and carcinogenesis studies of marine diesel fuel and JP-5 navy fuel (Case No. 8008-20-6) in B6C3F1 mice (dermal studies). Technical report series, 12:21232 (R;US)
**Toxicity**
Toxicology and carcinogenesis studies of marine diesel fuel and JP-5 navy fuel (Case No. 8008-20-6) in B6C3F1 mice (dermal studies). Technical report series, 12:21232 (R;US)

**JET MODEL**
**Quantum Chromodynamics**
Perturbative QCD and jets, 12:21522 (R;FR)
**JFT-2 TOKAMAK**
**ICR Heating**
ICRF heating experiments in JFT-2 tokamak, 12:21922 (R;JP;In Japanese)
**JFT-2M TOKAMAK**
*Tokamak device with a D-shaped cross section and a divertor.*
**Research Programs**
Annual report of the Fusion Research Center for the period of April 1, 1984 to March 31, 1985, 12:21999 (R;JP)
**JIPPT-2 DEVICE**
**Current-Drive Heating**
Current drive by fast magnetosonic waves near the lower hybrid frequency in the JIPP T-IIU tokamak, 12:21906 (R;JP)
**JMTR REACTOR**
**Control Elements**
Surveillance test of the JMTR core components, 12:20408 (R;JP;In Japanese)
**Neutron Reflectors**
Surveillance test of the JMTR core components, 12:20408 (R;JP;In Japanese)
**Reactor Cores**
Surveillance test of the JMTR core components, 12:20408 (R;JP;In Japanese)
**JOINTS**
*Mechanical joints only, not for BONE JOINTS.*
*See also PIPE JOINTS*
*WELDED JOINTS*
**Ultrasonic Testing**
Ultrasonic analysis of thin adhesive bonds, 12:20702 (BA;US)
**JOSEPHSON JUNCTIONS**
**Magnetic Flux**
Elementary pinning force for a superconducting vortex, 12:20564 (J;US)
**JT-60 REACTORS**
*See JT-60 TOKAMAK*
**JT-60 TOKAMAK**
**Divertors**
Numerical studies on JT-60 divertor plasma characteristics, 12:22002 (R;JP;In Japanese)
**Gas Injection**
Development of the piezoelectric gas injection valve for JT-60, 12:22000 (R;JP;In Japanese)
**MHD Equilibrium**
MHD equilibrium analysis method of JT-60 based on magnetic measurements, 12:22001 (R;JP;In Japanese)
**Research Programs**
Annual report of the Fusion Research Center for the period of April 1, 1984 to March 31, 1985, 12:21999 (R;JP)
**JUNCTIONS (SEMICONDUCTOR)**
*See SEMICONDUCTOR JUNCTIONS*
**JUPITER PLANET**
**Shock Waves**
Simulations of collisionless shocks, 12:21397 (J;US)
**JXFR REACTOR**
*See JXFR TOKAMAK*
**JXFR TOKAMAK**
**Research Programs**
Parametric and alternative studies for fusion experimental reactor (FER) (FY 1984), 12:21996 (R;JP;In Japanese)
**Specifications**
Summary of conceptual design study of fusion experimental reactor (FER). FY 1984 report, 12:21995 (R;JP;In Japanese)

## K

**K01**
*See KAONS NEUTRAL SHORT-LIVED*
**K-892 RESONANCES**
**Particle Decay**
Use of the Ksub(892)sup(*+-) resonance as an indicator of systematic distortions for the 2 meter hydrogen liquid ITEhF chamber, 12:20997 (R;SU;In Russian)
**Particle Production**
Associated production of the Ksup(*+)(890) or rho/sup 0/ with other particles in the K/sup +/p inclusive reactions at 32 GeV/c, 12:21499 (R;SU;In Russian)
Use of the Ksub(892)sup(*+-) resonance as an indicator of systematic distortions for the 2 meter hydrogen liquid ITEhF chamber, 12:20997 (R;SU;In Russian)
**KALUZA-KLEIN THEORY**
**Stability**
Vacuum stability in Kaluza-Klein theories, 12:21591 (R;XA)
**KAOLINITE**
**Chemical Reactions**
Studies of initial reaction steps in the gasification of coal: Final report, October 1983-September 1985, 12:19898 (R;US)
**KAON PLUS REACTIONS**
**Inelastic Scattering**
Inelastic scattering of 130MeV K/sup +/-mesons on light nuclei with proton escape, 12:21634 (R;SU;In Russian)
**Knock-Out Reactions**
Inelastic scattering of 130MeV K/sup +/-mesons on light nuclei with proton escape, 12:21634 (R;SU;In Russian)
**KAON PLUS-PROTON INTERACTIONS**
**Elastic Scattering**
On the preasymptotic mode in hadron elastic scattering, 12:21502 (R;SU)
**Inclusive Interactions**
Associated production of the Ksup(*+)(890) or rho/sup 0/ with other particles in the K/sup +/p inclusive reactions at 32 GeV/c, 12:21499 (R;SU;In Russian)
**Total Cross Sections**
On the preasymptotic mode in hadron elastic scattering, 12:21502 (R;SU)
**KAON-PROTON INTERACTIONS**
*See also KAON PLUS-PROTON INTERACTIONS*
**Cross Sections**
Preasymptotical corrections to the pomeron exchange, 12:21544 (R;SU)
**KAONS**
*See also KAONS PLUS*
**Semileptonic Decay**
Violation of CP-invariance and e/μ/tau-universality in horizontal gauge interactions, 12:21530 (R;SU)
**KAONS 1**
*See KAONS NEUTRAL SHORT-LIVED*
**KAONS NEUTRAL SHORT-LIVED**
**Leptonic Decay**
Analysis of e/sup +/e/sup -/ pair production in experiments with neutral kaons, 12:21536 (RA;SU;In Russian)
**Particle Production**
Inclusive Ksub(s)sup(0) and Λ and antiΛ production in 360 Gev/c pp interactions using the European Hybrid Spectrometer, 12:21498 (R;SU;In Russian)
**KAONS PLUS**
**Radiative Decay**
Radiative decays of charged kaons in the vector dominance model with account of chiral anomalies, 12:21529 (R;SU;In Russian)
**KELVIN-HELMHOLTZ INSTABILITY**
*See HELMHOLTZ INSTABILITY*
**KENTUCKY**
**Geologic Faults**
Post-Pliocene displacement on faults within the Kentucky River Fault System of east-central Kentucky, 12:21269 (R;US)
**KETENES**
**Absorption Spectra**
Electronic spectrum of thioketene and the excited-state structure of ketene, 12:20755 (J;US)
**Molecular Structure**
Electronic spectrum of thioketene and the excited-state structure of ketene, 12:20755 (J;US)

**Vibrational States**
Electronic spectrum of thioketene and the excited-state structure of ketene, 12:20755 (J;US)
**KEWAUNEE REACTOR**

Classical and holographic interferometry systems combined to document inertial fusion experiments, 12:22007 (R;US)
**Research Programs**
LLE [Laboratory for Laser Energetics] review: Quarterly report, January-March 1986, 12:21970 (R;US)

**LASER MATERIALS**
**Compression Strength**
Development of high strength state laser materials, 12:20876 (J;US)
**Crystal Growth**
GSGG crystal growth and quality: a status report, 12:20875 (J;US)
**Energy Transfer**
Optical properties of $LaMgAl_{11}O_{19}$:Cr,Nd, 12:20874 (J;US)
**Irradiation**
Catastrophic versus microscopic damage: Applicability of laboratory measurements to real systems, 12:20879 (BA;US)
**Losses**
GSGG crystal growth and quality: a status report, 12:20875 (J;US)
**Meetings**
Laser induced damage in optical materials: 1983, 12:20878 (B;US)
**Optical Properties**
GSGG crystal growth and quality: a status report, 12:20875 (J;US)
Optical properties of $LaMgAl_{11}O_{19}$:Cr,Nd, 12:20874 (J;US)
Optical properties of $Cr^{3+}$ in fluorite-structure hosts and in $MgF^{*}_{2}$, 12:20857 (J;US)
Spectroscopic, optical, and thermo-mechanical properties of GSGG and its laser performance, 12:20877 (J;US)
**Quality Control**
GSGG crystal growth and quality: a status report, 12:20875 (J;US)
**Tensile Properties**
Development of high strength state laser materials, 12:20876 (J;US)
Spectroscopic, optical, and thermo-mechanical properties of GSGG and its laser performance, 12:20877 (J;US)
**Thermal Fractures**
Development of high strength state laser materials, 12:20876 (J;US)
Spectroscopic, optical, and thermo-mechanical properties of GSGG and its laser performance, 12:20877 (J;US)
**LASER MIRRORS**
**Fabrication**
Confocal unstable-resonator semiconductor laser, 12:20850 (R;US)
**Feedback**
Optical feedback, wavelength response, and interference effects of self-pumped phase conjugation in $BaTiO_3$, 12:20888 (J;US)
**Interference**
Optical feedback, wavelength response, and interference effects of self-pumped phase conjugation in $BaTiO_3$, 12:20888 (J;US)
**LASER RADIATION**
**Atomic Physics**
Physics at the laser-atomic frontier. Final report, 12:21445 (R;US)
**Diffusion**
Doping of silicon by laser-induced diffusion, 12:21751 (R;ZA;In English and Afrikaans)
**Focusing**
Thermal self-focusing with multiple beams, 12:21973 (R;US)
**Physical Radiation Effects**
Measurements of the dependence of damage thresholds on laser wavelength, pulse duration and film thickness, 12:20885 (BA;US)
Predamage threshold electron emission from insulator and semiconductor surfaces, 12:20880 (BA;US)
Recent damage results on high reflector coatings at 355 nm, 12:20883 (BA;US)
Recent damage results for antireflection coatings at 355 nm, 12:20884 (BA;US)
**Scattering**
Search for lower hybrid drift fluctuations in a field-reversed configuration by means of carbon dioxide heterodyne scattering, 12:22033 (D;US)
**Silicon**
Doping of silicon by laser-induced diffusion, 12:21751 (R;ZA;In English and Afrikaans)
**LASER SPECTROSCOPY**
Physics at the laser-atomic frontier. Final report, 12:21445 (R;US)
**LASER TARGETS**
**Design**
Summary abstract: fabrication of Rayleigh-Taylor instability experiment, 12:22034 (J;US)
**Fabrication**
Summary abstract: fabrication of Rayleigh-Taylor instability experiment, 12:22034 (J;US)
Target fabrication for high density target experiments at the University of Rochester's Laboratory for Laser Energetics, 12:21971 (R;US)
**Heat Transfer**
Thermal transport studies using extreme ultraviolet spectroscopy: Final report for the period 31 August 1984-1 January 1986, 12:21975 (R;US)
**Laser Implosions**
Direct-drive laser-fusion in the US, 12:21972 (R;US)
**Lifetime**
Thermal stability of cryogenic targets in laser experiments, 12:21983 (RA;SU;In Russian)
**LASER-PRODUCED PLASMA**
**Absorption**
X-ray absorption measurements in high-Z laser plasmas, 12:20853 (R;FR)
**Electric Fields**
Two-dimensional analytical considerations of large magnetic and electric fields in laser produced plasma, 12:21865 (RA;IL)
**Electrons**
Suprathermal electron generation in cannonball targets, 12:21982 (R;JP)
**Focusing**
Thermal self-focusing with multiple beams, 12:21973 (R;US)
**Hydrodynamic Model**
Evolution of strong shock waves produced by a trapezoidal laser pulse, 12:21869 (RA;IL)
**Laser Spectroscopy**
Use of unresolved transition arrays for diagnosis of hot plasma, 12:21868 (RA;IL)
**M Codes**
MacFuse: A laser fusion simulation code for the Macintosh, 12:22012 (R;US)
**Magnetic Fields**
Two-dimensional analytical considerations of large magnetic and electric fields in laser produced plasma, 12:21865 (RA;IL)
**Meetings**
Laser and plasma technology, 12:22035 (B;SG)
**One-Dimensional Calculations**
Radiation transport and preheat calculations of laser irradiated Al targets, 12:21864 (RA;IL)
**Parametric Instabilities**
LLE [Laboratory for Laser Energetics] review: Quarterly report, January-March 1986, 12:21970 (R;US)
**Plasma Diagnostics**
Classical and holographic interferometry systems combined to document inertial fusion experiments, 12:22007 (R;US)
**Plasma Simulation**
Radiation transport and preheat calculations of laser irradiated Al targets, 12:21864 (RA;IL)
**Population Inversion**
Experimental study of population inversion in laser plasmas, 12:20852 (R;FR)
**Radiation Transport**
Radiation transport and preheat calculations of laser irradiated Al targets, 12:21864 (RA;IL)
**Shock Waves**
Evolution of strong shock waves produced by a trapezoidal laser pulse, 12:21869 (RA;IL)
**Targets**
Suprathermal electron generation in cannonball targets, 12:21982 (R;JP)

**X Radiation**
2l-3l′ and 2l-4l′ transitions in heliumlike and hydrogenlike silicon, 12:21465 (J;US)
X-ray absorption measurements in high-Z laser plasmas, 12:20853 (R;FR)

**LASERS**
*Light Amplification by Stimulated Emission of Radiation.*

*FREE ELECTRON LASERS*
*GAS LASERS*
*SEMICONDUCTOR LASERS*
*SOLID STATE LASERS*
*X-RAY LASERS*

**Atomic Physics**
Physics at the laser-atomic frontier. Final report, 12:21445 (R;US)

**Beam Optics**
Dual beam translator for use in laser doppler anemometry, 12:20861 (P;US)

**Damage**
Catastrophic versus microscopic damage: Applicability of laboratory measurements to real systems, 12:20879 (BA;US)
Predamage threshold electron emission from insulator and semiconductor surfaces, 12:20880 (BA;US)

**Dielectric Materials**
Alumina/silica multilayer coatings for excimer lasers, 12:20882 (BA;US)

**Doppler Effect**
Dual beam translator for use in laser doppler anemometry, 12:20861 (P;US)

**Electron Emission**
Predamage threshold electron emission from insulator and semiconductor surfaces, 12:20880 (BA;US)

**Fabrication**
Measurements of the dependence of damage thresholds on laser wavelength, pulse duration and film thickness, 12:20885 (BA;US)
Recent damage results on high reflector coatings at 355 nm, 12:20883 (BA;US)
Recent damage results for antireflection coatings at 355 nm, 12:20884 (BA;US)

**Far Infrared Radiation**
Optically pumped FIR lasers and their application in plasma diagnostics, 12:21443 (R;HU)

**Feasibility Studies**
Activities at LLNL relevant to gamma-ray laser concepts, 12:20867 (J;US)
Assessment of a method proposed for finding transfer levels for isomeric deexcitations, 12:20871 (J;US)
Critical review of gamma-ray laser proposals, 12:20863 (J;US)
Interlevel transfer mechanisms and their application to grasers, 12:20865 (J;US)
Kinetics of nuclear superradiance, 12:20866 (J;US)
Nuclear structure properties for gamma-ray lasers, 12:20864 (J;US)

**Focusing**
Dual beam translator for use in laser doppler anemometry, 12:20861 (P;US)

**Gamma Radiation**
Activities at LLNL relevant to gamma-ray laser concepts, 12:20867 (J;US)
Assessment of a method proposed for finding transfer levels for isomeric deexcitations, 12:20871 (J;US)
Critical review of gamma-ray laser proposals, 12:20863 (J;US)
Interlevel transfer mechanisms and their application to grasers, 12:20865 (J;US)
Kinetics of nuclear superradiance, 12:20866 (J;US)
Nuclear excitation through the dynamic hyperfine effect, 12:20868 (J;US)
Nuclear excitation by laser driven coherent outer shell electron oscillations, 12:20870 (J;US)
Nuclear structure properties for gamma-ray lasers, 12:20864 (J;US)
Possibility of grasing by laser-driven nuclear excitation, 12:20869 (J;US)
Predicted changes of the internal conversion rates in /sup 119/Sn due to admixtures of lower multipole order, 12:20872 (J;US)

**Holography**
Observation of erasable holographic gratings at room temperature in $Eu^{3+}$ -doped glasses, 12:20846 (R;US)

**Internal Conversion**
Predicted changes of the internal conversion rates in /sup 119/Sn due to admixtures of lower multipole order, 12:20872 (J;US)

**Laser Materials**
Predamage threshold electron emission from insulator and semiconductor surfaces, 12:20880 (BA;US)

**Materials Testing**
Damage thresholds of fused silica, plastics and KDP crystals measured with 0.6-ns 355-nm pulses, 12:20886 (BA;US)

**Noise**
Noise-induced switching of photonic logic elements, 12:20859 (J;US)

**Optical Systems**
Alumina/silica multilayer coatings for excimer lasers, 12:20882 (BA;US)
Catastrophic versus microscopic damage: Applicability of laboratory measurements to real systems, 12:20879 (BA;US)
Laser damage in porous-silica antireflection films, 12:20881 (BA;US)
Measurements of the dependence of damage thresholds on laser wavelength, pulse duration and film thickness, 12:20885 (BA;US)
Recent damage results on high reflector coatings at 355 nm, 12:20883 (BA;US)
Recent damage results for antireflection coatings at 355 nm, 12:20884 (BA;US)

**Planning**
Activities at LLNL relevant to gamma-ray laser concepts, 12:20867 (J;US)

**Plasma Diagnostics**
Optically pumped FIR lasers and their application in plasma diagnostics, 12:21443 (R;HU)

**Pumping**
Assessment of a method proposed for finding transfer levels for isomeric deexcitations, 12:20871 (J;US)
Critical review of gamma-ray laser proposals, 12:20863 (J;US)
Interlevel transfer mechanisms and their application to grasers, 12:20865 (J;US)
Kinetics of nuclear superradiance, 12:20866 (J;US)
Nuclear excitation through the dynamic hyperfine effect, 12:20868 (J;US)
Nuclear excitation by laser driven coherent outer shell electron oscillations, 12:20870 (J;US)
Possibility of grasing by laser-driven nuclear excitation, 12:20869 (J;US)
Predicted changes of the internal conversion rates in /sup 119/Sn due to admixtures of lower multipole order, 12:20872 (J;US)

**Radiation Flux**
Beam profiling in gigawatt 1064-nm lasers used in research on optical materials at Livermore, 12:20887 (J;US)

**Stability**
Noise-induced switching of photonic logic elements, 12:20859 (J;US)

**Thermionic Emission**
Predamage threshold electron emission from insulator and semiconductor surfaces, 12:20880 (BA;US)

*FORMIC ACID*
**Diagnostic Uses**
Radioiodinated 5-iodothienyl-2-substituted long chain fatty acids for myocardial imaging, 12:21181 (J;US)
**Labelling**
Radioiodinated 5-iodothienyl-2-substituted long chain fatty acids for myocardial imaging, 12:21181 (J;US)
**Uptake**
Radioiodinated 15-(p-iodophenyl)-3,3-dimethylpentadecanoic acid (DMIPP): A new agent to evaluate regional myocardial fatty acid uptake, 12:21180 (J;US)

**MONOCLONAL ANTIBODIES**
**Chemical Reaction Kinetics**
Considerations in the radioiodination and chelation labeling of an antiplatelet monoclonal antibody, 12:21167 (J;US)
Effect of chloramine-T labeling conditions on the stability of monoclonal antibodies and their fragments, 12:21168 (J;US)
**Labelling**
Considerations in the radioiodination and chelation labeling of an antiplatelet monoclonal antibody, 12:21167 (J;US)
Effect of chloramine-T labeling conditions on the stability of monoclonal antibodies and their fragments, 12:21168 (J;US)
Thrombus detection with a radiolabeled antiplatelet monoclonal antibody: Comparison with In-111-oxine technique in coronary and peripheral thrombi in dogs, 12:21174 (J;US)
**Therapeutic Uses**
P-31-NMR analysis of in vivo metabolic events in lymphoma during RIT, 12:21173 (J;US)

**MONTANA**
**Streams**
Seasonal variability in Prickly Pear Creek water quality and macroinvertebrate communities, 12:21130 (R;US)

**MONTE CARLO METHOD**
**Defects**
Monte Carlo-narrow resonance calculational techniques for treating double-heterogeneity effects, 12:21704 (R;US)

**MORGANTOWN ENERGY TECHNOLOGY CENTER**
**Bibliographies**
Morgantown Energy Technology Center: Publications list, FY 86, 12:22046 (R;US)

**MOS TRANSISTORS**
*Metal Oxide Silicon transistors.*
**Mathematical Models**
Verification and modification of the dc MOS-transitor model of Poorter. Thesis, 12:20972 (R;NL;In Dutch)
**Network Analysis**
Verification and modification of the dc MOS-transitor model of Poorter. Thesis, 12:20972 (R;NL;In Dutch)

**MT ST HELENS**
**Earthquakes**
Patterns of earthquakes and the effect of solid earth and ocean load tides at Mount St. Helens prior to the May 18, 1980, eruption, 12:21274 (J;US)
**Stress Analysis**
Patterns of earthquakes and the effect of solid earth and ocean load tides at Mount St. Helens prior to the May 18, 1980, eruption, 12:21274 (J;US)

**MTR REACTOR**
**Computer Calculations**
Benchmarking codes for research reactor calculations, 12:20404 (RA;IL)

**MULTI-CHANNEL ANALYZERS**
**Amplitudes**
Study, realization and operation of a fast amplitude selector for X-ray spectrometry in thermonuclear plasma, 12:21861 (R;FR;In French)

**MULTIGROUP THEORY**
**Algorithms**
Iterative selection principles for homogenized group constants, 12:20377 (R;SU;In Russian)
**Group Constants**
Iterative selection principles for homogenized group constants, 12:20377 (R;SU;In Russian)

MULTIPHASE FLOW
Mathematical Models
Analysis of a multiphase, porous-flow imbibition experiment in fractured volcanic tuff, 12:20129 (R;US)
Pressure Effects
Analysis of a multiphase, porous-flow imbibition experiment in fractured volcanic tuff, 12:20129 (R;US)
MULTIPLE PRODUCTION
*See also PIONIZATION*
Correlations
Relativistic invariant analysis of correlation phenomena in multiple production processes, 12:21535 (RA;SU;In Russian)
MULTIPLICATION FACTORS
Albedo
Reactor Ksub(eff) calculation using the albedo-diffusion approximation, 12:20376 (R;SU;In Russian)
MULTIPROCESSING
*See PARALLEL PROCESSING*
MULTIPROCESSORS
*See ARRAY PROCESSORS*
MULTIWIRE PROPORTIONAL CHAMBERS
Design
Design report on a 10-in. multiwire proportional chamber (MWPC) and associated electronics, 12:21005 (R;US)
Specifications
Design report on a 10-in. multiwire proportional chamber (MWPC) and associated electronics, 12:21005 (R;US)
MUON-CATALYZED FUSION
Muon sticking to helium in the muon catalyzed fusion ddμ -> μ/sup 3/He + n, 12:21438 (R;SU)
Stripping of $\mu^-$ from $\alpha\mu$ after muon-catalyzed fusion: Effect of target structure, 12:21459 (J;US)
Feasibility Studies
Some thoughts on the production of muons for fusion catalysis, 12:22028 (J;US)
Nuclear Reaction Kinetics
Influence of the process (dμ)sub(n)+t -> d+(tμ)sub(n) on the kinetics of muon catalysis in a mixture D/sub 2/+T/sub 2/, 12:21630 (R;SU)
MUONIC ATOMS
Ion-Atom Collisions
Stripping of $\mu^-$ from $\alpha\mu$ after muon-catalyzed fusion: Effect of target structure, 12:21459 (J;US)
MUONIC MOLECULES
Rotational States
Variational calculation of energy levels of mesic molecules of hydrogen isotopes, 12:21441 (R;SU;In Russian)
Vibrational States
Variational calculation of energy levels of mesic molecules of hydrogen isotopes, 12:21441 (R;SU;In Russian)
MUONIUM
JINR rapid communications. Collection, 12:21434 (R;SU;In Russian)
Ground States
Renormalization group calculation of some contributions to hyperfine splitting of the ground level in muonium, 12:21433 (RA;SU;In Russian)
Hyperfine Structure
New approach to bound-state quantum electrodynamics-II: Spectra of positronium, muonium and hydrogen, 12:21432 (R;XA)
MUONS
*See also MUONS MINUS*
*MUONS PLUS*
JINR rapid communications. Collection, 12:21434 (R;SU;In Russian)
Leptonic Decay
Violation of CP-invariance and e/μ/tau-universality in horizontal gauge interactions, 12:21530 (R;SU)
Radiative Decay
Search for rare muon and pion decay modes with the Crystal Box detector, 12:21508 (R;US)
MUONS MINUS
Multiple Production
Some thoughts on the production of muons for fusion catalysis, 12:22028 (J;US)
MUONS PLUS
Leptonic Decay
Automated complex for muon investigations, 12:20980 (R;SU;In Russian)
Radiative Decay
Search for the rare decay $\mu^+ \rightarrow e^+ \gamma\gamma$, 12:21517 (J;US)
MUSEUMS
*See EDUCATIONAL FACILITIES*
MUTATIONS
*See also CHROMOSOMAL ABERRATIONS*
*DOMINANT MUTATIONS*

*LETHAL MUTATIONS*
Radioinduction
Lack of UV-induced respiration shutoff in a recF strain of Escherichia coli: temperature conditional suppression at 30°C by the sfrA mutation, 12:21208 (J;NL)
MWPC
*See MULTIWIRE PROPORTIONAL CHAMBERS*
MYOCARDIUM
Blood Flow
Dead time correction and counting statistics for positron tomography, 12:21172 (J;US)
Hypertension
Radioiodinated 15-(p-iodophenyl)-3,3-dimethylpentadecanoic acid (DMIPP): A new agent to evaluate regional myocardial fatty acid uptake, 12:21180 (J;US)
Positron Computed Tomography
A new rapid radiobromination via transmetallation for the synthesis of radiobrominated myocardial imaging agents, 12:21177 (J;US)
Dead time correction and counting statistics for positron tomography, 12:21172 (J;US)
Radioisotope Scanning
Radioiodinated 5-iodothienyl-2-substituted long chain fatty acids for myocardial imaging, 12:21181 (J;US)

## N

NAPHTHALENE
Electronic Structure
Conformation and electronic relaxation of molecular triplet excimers: triplet excimers of naphthalene and related molecules, 12:20788 (J;US)
NAPHTHENES
*See CYCLOALKANES*
NATIONAL DEFENSE
*See also BALLISTIC MISSILE DEFENSE*
Strategic defenses and the transition to assured survival. Interim report, 12:20527 (R;US)

**NEON 20 REACTIONS**
**Precompound-Nucleus Emission**
Precompound decay in heavy ion reactions via the hybrid model, 12:21677 (J;US)
**NEON 22 REACTIONS**
**Gamma Spectra**
Study of high energy gamma-rays in heavy ion reactions, 12:21621 (RA;SU)
**NEON 27**
**Mass**
Direct mass measurements of neutron-rich light nuclei near N = 20, 12:21638 (J;US)
**NEON 28**
**Mass**
Direct mass measurements of neutron-rich light nuclei near N = 20, 12:21638 (J;US)
**NEON IONS**
**Collisions**
Secondary-ion emission from vanadium as a function of incident ion mass and energy in the range 25—275 keV, 12:21756 (J;US)
Secondary-ion emission from clean and oxidized aluminum as a function of incident ion mass and energy, 12:20567 (J;US)
**NEOPLASMS**
*See also LYMPHOMAS*
**Anoxia**
Survival of tumor bearing mice by sequencing of low dose rate (LDR) neutron and photon radiation, 12:21225 (BA;US)
**Diagnosis**
Synthesis and biodistribution of no-carrier-added [1-/sup 11/C]putrescine, 12:21176 (J;US)
**Pathological Changes**
Paraneoplastic syndromes, 12:21190 (R;US)
**Radiosensitivity**
Survival of tumor bearing mice by sequencing of low dose rate (LDR) neutron and photon radiation, 12:21225 (BA;US)
**Radiotherapy**
Experimental tumour treatment. Report 1984 on the cooperation between the Institute of Radiobiology of Muenchen University and the Department of Radiobiology of the Society for Radiation and Environment Research, Neuherberg, 12:21159 (R;DE;In German)
Survival of tumor bearing mice by sequencing of low dose rate (LDR) neutron and photon radiation, 12:21225 (BA;US)
**NEPHELINE BASALTS**
**Enthalpy**
High temperature liquid and glass heat contents and the heats of fusion of diopside, albite, sanidine and nepheline, 12:21285 (J;US)

**Fusion Heat**
High temperature liquid and glass heat contents and the heats of fusion of diopside, albite, sanidine and nepheline, 12:21285 (J;US)
**NEPTUNIUM**
**Chemical Properties**
Organometallic chemistry of neptunium, 12:20804 (R;DE;In German)
**NEPTUNIUM COMPLEXES**
**Coordination Valences**
Organometallic chemistry of neptunium, 12:20804 (R;DE;In German)
**Molecular Structure**
Organometallic chemistry of neptunium, 12:20804 (R;DE;In German)
**NERVE CELLS**
**Bioelectricity**
Information processing in the cortex: the role of small assemblies of neurons, 12:21194 (BA;US)
Microscopic-macroscopic interface in biological information processing, 12:21198 (BA;US)
**NETHERLANDS**
**Aquifers**
Flow, origin, and age of groundwater in some deep-lying poorly permeable aquifers in the Netherlands; implications for geological waste disposal, 12:20089 (RA;US)
**Fly Ash**
Environmental aspects of fly-ash application in the Netherlands, 12:19920 (R;US)
**Fossil-Fuel Power Plants**
Measurement of the background concentration in precipitation, 12:19924 (R;NL;In Dutch)
**Hydrology**
Flow, origin, and age of groundwater in some deep-lying poorly permeable aquifers in the Netherlands; implications for geological waste disposal, 12:20089 (RA;US)
**Reactor Operators**
Qualification, training, licensing and retraining of operating shift personnel in nuclear power plants. Presentation of different procedures in the countries of the European Community, Spain, Sweden, Switzerland and the USA, 12:20324 (R;FR)
**NETWORKS (COMPUTER)**

**NEUTRON MONITORS**
Solar-Geophysical Data Number 506, October 1986. Part 1 (prompt reports). Data for September 1986, August 1986, and late data, 12:21389 (R;US)
**NEUTRON RADIOGRAPHY**
**Uses**
Scientific conference proceedings. Session 2. Reactor materials, 12:20389 (R;CS;In Czech)
**NEUTRON REACTIONS**
**Capture**
Nuclear structure of /sup 231/Th from neutron capture and (d,p) reaction measurements, 12:21658 (J;US)
The application of electroreduction of europium in the production of gadolinium-153, 12:20805 (R;US)
**Compound-Nucleus Reactions**
Production of /sup 91/Nb, /sup 94/Nb, and /sup 95/Nb from Mo by 14.5—14.8 MeV neutrons, 12:22018 (J;US)
**Fast Fission**
Status of fast neutron nuclear data for /sup 239/Pu, 12:21661 (BA;US)
**Total Cross Sections**
Status of fast neutron nuclear data for /sup 239/Pu, 12:21661 (BA;US)

**NEUTRON REFLECTORS**
**Benchmarks**
Benchmark experiments on a lead reflected system and calculations on the geometry of the experimental facility using most of the commonly available nuclear data libraries, 12:20825 (R;FR)
**Lead**
Benchmark experiments on a lead reflected system and calculations on the geometry of the experimental facility using most of the commonly available nuclear data libraries, 12:20825 (R;FR)
**NEUTRON SOURCES**
*Excludes reactors even when used as neutron sources.*
**Neutron Choppers**
Test of a correlation chopper at a pulsed spallation neutron source, 12:20975 (R;US)
**NEUTRON SPECTROMETERS**
**Design**
Design of a high efficiency neutron spectrometer for neutron multiplication reactions, 12:20979 (RA;IL)
**Dielectric Track Detectors**
Design and development of wide energy neutron REM equivalent spectrometer-dosimeters based on polycarbonates and Cr-39, 12:20977 (R;IL)
**Performance**
Improving neutron spectrometer performances through spatial and focusing effects: Investigation of spatial correlation focusing influence on the resolution in diffraction and phonon scattering experiments. Final report for the period 1 August 1983-28 February 1986 (Computer programme TRAX), 12:20982 (R;XA)
**Proton Recoil Detectors**
Design and development of wide energy neutron REM equivalent spectrometer-dosimeters based on polycarbonates and Cr-39, 12:20977 (R;IL)
**Secondary Reactions**
Design of a high efficiency neutron spectrometer for neutron multiplication reactions, 12:20979 (RA;IL)
**Sensitivity Analysis**
MCNP analysis of the LSTDS system to determine its feasibility as a spent fuel assay device, 12:20048 (D;US)
**T Codes**
Improving neutron spectrometer performances through spatial and focusing effects: Investigation of spatial correlation focusing influence on the resolution in diffraction and phonon scattering experiments. Final report for the period 1 August 1983-28 February 1986 (Computer programme TRAX), 12:20982 (R;XA)

**Hydrology**
Comparison of hydraulic properties of fractured dolomite determined by pressure pulse, slug/bailer, and pumping tests, 12:21259 (RA;US)
Hydraulic studies in low permeability evaporite deposits, southeastern New Mexico, (SENM), 12:20094 (RA;US)
Hydraulic properties of the Pierre Shale a comparison of methods, 12:21260 (RA;US)
**NICKEL**
**Absorption Spectroscopy**
Use of electrothermal atomization for determining metallic impurities in nuclearly pure uranium compounds, 12:20728 (R;BR;In Portuguese)
**Autoionization**
Summary abstract: autoionization emission from transition metals: an electron stimulated analog of resonant photoemission, 12:20607 (J;US)
**Chemical Reaction Kinetics**
Evolution of the nickel/zirconia interface, 12:20646 (BA;US)
Metal-mediated making and breaking of carbon-carbon bonds in aromatic hydrocarbons, 12:20781 (J;US)
**Electron Microscopy**
Evolution of the nickel/zirconia interface, 12:20646 (BA;US)
**Electronic Structure**
Summary abstract: autoionization emission from transition metals: an electron stimulated analog of resonant photoemission, 12:20607 (J;US)
**Emission Spectroscopy**
Spectrographic determination of impurities in beryllium oxide, 12:20730 (R;BR;In Portuguese)
**Grain Boundaries**
Effects of segregation on grain-boundary cohesion: A density-functional cluster model of boron and sulfur in nickel, 12:20570 (J;US)
**Interstitials**
Effects of segregation on grain-boundary cohesion: A density-functional cluster model of boron and sulfur in nickel, 12:20570 (J;US)
**Magnetic Testing**
Microstructural characterization of polycrystalline nickel using magnetic nde methods, 12:20586 (BA;US)
**Mechanical Properties**
Effects of segregation on grain-boundary cohesion: A density-functional cluster model of boron and sulfur in nickel, 12:20570 (J;US)
**Microstructure**
Microstructural characterization of polycrystalline nickel using magnetic nde methods, 12:20586 (BA;US)
**Morphology**
Evolution of the nickel/zirconia interface, 12:20646 (BA;US)
**Physical Radiation Effects**
Ion-beam-mixing in metal-metal systems and metal-silicon systems, 12:20617 (D;US)

Mechanisms of interstitial loop formation in metals under low radiation doses, 12:21722 (R;SU;In Russian)
TiC, Ti, and C as a mixing barrier for Ni-Si ion beam mixing, 12:20569 (J;US)
**Positron Collisions**
Positronium time-of-flight spectroscopy of dissimilar metals, 12:20555 (J;US)
**Segregation**
Effects of segregation on grain-boundary cohesion: A density-functional cluster model of boron and sulfur in nickel, 12:20570 (J;US)
**Stopping Power**
Oblique target transmission technique in measuring stopping powers, 12:21739 (R;XA)
Split-target technique in determining the dE/dX of 1.0-5.0 MeV tritium in A1, Ni and Au, 12:21431 (R;XA)
**Temperature Effects**
Evolution of the nickel/zirconia interface, 12:20646 (BA;US)
**Work Functions**
Positronium time-of-flight spectroscopy of dissimilar metals, 12:20555 (J;US)
**NICKEL 58 REACTIONS**
**Compound-Nucleus Reactions**
Investigation of A = 152 radioactivities with mass-separated sources: Identification of /sup 152/Lu, 12:21646 (J;US)
**NICKEL 58 TARGET**
**Neutron Reactions**
Study on cross sections of ultracold neutron interaction with the /sup 58/Ni ferromagnetic, 12:21640 (RA;SU;In Russian)
**Silicon 28 Reactions**
Coupled-channels analysis of silicon-nickel fusion reactions, 12:21679 (J;US)
**Silicon 30 Reactions**
Coupled-channels analysis of silicon-nickel fusion reactions, 12:21679 (J;US)
**NICKEL 62 TARGET**
**Silicon 28 Reactions**
Coupled-channels analysis of silicon-nickel fusion reactions, 12:21679 (J;US)
**Silicon 30 Reactions**
Coupled-channels analysis of silicon-nickel fusion reactions, 12:21679 (J;US)
**NICKEL 64 TARGET**
**Silicon 28 Reactions**
Coupled-channels analysis of silicon-nickel fusion reactions, 12:21679 (J;US)
**Silicon 30 Reactions**
Coupled-channels analysis of silicon-nickel fusion reactions, 12:21679 (J;US)
**NICKEL ALLOYS**
*See also NICKEL BASE ALLOYS*
**Charpy Test**
Fusion materials specimens from MOTA-1C FFTF [Fast Flux Test Facility] Cycles 5-6, 12:20544 (R;US)
**Crack Propagation**
Correlation between decomposition structure and fatigue crack propagation in a copper-nickel-chromium alloy, 12:20539 (R;DE;In German)
Role of segregated P and S in intergranular stress corrosion cracking of Ni, 12:20580 (J;US)
**Eddy Current Testing**
Eddy current nondestructive evaluation of laser glazed metallic surfaces, 12:20585 (BA;US)
**Electron Collisions**
Generalized Ramsauer-Townsend resonance in angle-resolved photoemission extended fine-structure oscillations, 12:20572 (J;US)
**Electronic Specific Heat**
Formation and destruction of the heavy-electron ground state in U compounds with $AuBe_5$ crystal structure, 12:20573 (J;US)
**Electronic Structure**
Formation and destruction of the heavy-electron ground state in U compounds with $AuBe_5$ crystal structure, 12:20573 (J;US)
**Fatigue**
Correlation between decomposition structure and fatigue crack propagation in a copper-nickel-chromium alloy, 12:20539 (R;DE;In German)
**Laser Beam Machining**
Eddy current nondestructive evaluation of laser glazed metallic surfaces, 12:20585 (BA;US)
**Microstructure**
Correlation between decomposition structure and fatigue crack propagation in a copper-nickel-chromium alloy, 12:20539 (R;DE;In German)
**Ramsauer Effect**
Generalized Ramsauer-Townsend resonance in angle-resolved photoemission extended fine-structure oscillations, 12:20572 (J;US)
**Stress Corrosion**
Role of segregated P and S in intergranular stress corrosion cracking of Ni, 12:20580 (J;US)
**Surface Hardening**
Eddy current nondestructive evaluation of laser glazed metallic surfaces, 12:20585 (BA;US)
**Swelling**
Spinodal-like decomposition of Fe-Ni and Fe-Ni-Cr alloys in both radiation and non-radiation environments, 12:20546 (R;US)
**Tensile Properties**
Effects of low doses of 14-MeV neutrons on the tensile properties of three binary copper alloys, 12:20545 (R;US)
**NICKEL BASE ALLOYS**
**Crack Propagation**
Material selection for nuclear waste processing facility, 12:20133 (J;US)
**Electric Conductivity**
Effects of temperature and composition on the thermal and electrical conductivities of $Ni_3Al$, 12:20560 (J;US)
**Electron-Phonon Coupling**
Effects of temperature and composition on the thermal and electrical conductivities of $Ni_3Al$, 12:20560 (J;US)
**Fatigue**
Cyclic stress-strain behavior of PWA 1480 at 650 deg C, 12:20552 (R;US)
**Pitting Corrosion**
Material selection for nuclear waste processing facility, 12:20133 (J;US)
**Seebeck Effect**
Effects of temperature and composition on the thermal and electrical conductivities of $Ni_3Al$, 12:20560 (J;US)
**Stress Corrosion**
Material selection for nuclear waste processing facility, 12:20133 (J;US)
**Thermal Conductivity**
Effects of temperature and composition on the thermal and electrical conductivities of $Ni_3Al$, 12:20560 (J;US)
**NICKEL BORIDES**
**Thermal Expansion**
Thermal expansion coefficient determination by CBED, 12:20613 (BA;US)
**NICKEL COMPOUNDS**
*See also NICKEL BORIDES*

**Economics**
RTR DAP process for oil recovery from tar sands, 12:20021 (RA;US)
**Environmental Impacts**
VEBA-Combi-Cracking (VCC), a proven technology for high conversion of heavy bottoms, 12:20024 (RA;US)
**Performance Testing**
Upgrading Cold Lake bitumen using the HSC-ROSE process, 12:20023 (RA;US)
**Technology Assessment**
VEBA-Combi-Cracking (VCC), a proven technology for high conversion of heavy bottoms, 12:20024 (RA;US)
**OIL SAND TAILINGS**
**Materials Recovery**
Preliminary assessment of agglomeration techniques for bitumen separation from storage tank sludge, 12:20032 (RA;US)
**Waste Disposal**
Application of marine geophysical techniques for monitoring tailings pond development at the Syncrude Canada Ltd. oil sands plant in N.E. Alberta, 12:20035 (RA;US)

OIL SANDS
Acoustic Emission Testing
Acoustic emissions for the determination of production front locations in tar sand, 12:20019 (RA;US)
Comminution
Processing and development of Alabama tar sands, 12:20020 (RA;US)
Directional Drilling
Review of horizontal well technology, 12:20002 (RA;US)
Status of an oil mining project, 12:20003 (RA;US)
Flotation
Processing and development of Alabama tar sands, 12:20020 (RA;US)
Fracture Properties
Technique for the measurement of fracture toughness of oil sands, 12:20028 (RA;US)
Gas Injection
Potential role of hydrogen from low-Btu gas in heavy oil and tar sands extraction technology, 12:19902 (RA;US)
Hydrogenation
Advanced thermal EOR technology, 12:20014 (RA;US)
In-Situ Combustion
Comparison of the effect of thermal cracking and low temperature oxidation on fuel deposition during in situ combustion, 12:20015 (RA;US)
Effect of water treatment alternatives on water demands for in situ production of bitumen, 12:20036 (RA;US)
Laboratory studies of forward combustion in tar sand (Tar Sand Triangle), 12:20016 (RA;US)
Saturated hydrocarbon distributions in bitumens and in oils recovered by thermal processes, 12:20030 (RA;US)
In-Situ Processing
Acoustic emissions for the determination of production front locations in tar sand, 12:20019 (RA;US)
Advanced thermal EOR technology, 12:20014 (RA;US)
Mathematical modeling for in situ thermal recovery processes in tar sand: model description and verification, 12:20018 (RA;US)
Mechanical Properties
Measurements of thermophysical and mechanical properties of oil sands, 12:20027 (RA;US)
Physical Properties
Measurements of thermophysical and mechanical properties of oil sands, 12:20027 (RA;US)
Reserves
Structural and stratigraphic controls Uinta Basin tar sand deposits, northeast Utah, 12:19998 (RA;US)
Reverse Combustion
Major tar sand deposits of Utah, United States: recent field investigations, 12:20001 (RA;US)
Saturated hydrocarbon distributions in bitumens and in oils recovered by thermal processes, 12:20030 (RA;US)
Solvent Extraction
Demonstration plant design and economics of the Beaver-Herter extraction process, 12:20022 (RA;US)
RTR DAP process for oil recovery from tar sands, 12:20021 (RA;US)
Steam Injection
Comparison of laboratory and field steamfloods in tar sand, 12:20017 (RA;US)
Effect of water treatment alternatives on water demands for in situ production of bitumen, 12:20036 (RA;US)
Review of horizontal well technology, 12:20002 (RA;US)
Saturated hydrocarbon distributions in bitumens and in oils recovered by thermal processes, 12:20030 (RA;US)
Thermodynamic Properties
Measurements of thermophysical and mechanical properties of oil sands, 12:20027 (RA;US)
OIL SHALE INDUSTRY
Environmental Impacts
Siting methodology: divergence and vorticity in the Rocky Mountain plateau circulation, 12:20038 (RA;US)
Socio-Economic Factors
Australian perspectives on oil shale development, 12:20034 (RA;US)
OIL SHALE PROCESSING PLANTS
Air Pollution Monitoring
Industrial hygiene study of a true in situ oil shale retorting facility, 12:21100 (J;US)
Health Hazards
Industrial hygiene study of a true in situ oil shale retorting facility, 12:21100 (J;US)
OIL SHALE WASTE WATER

**Measuring Methods**
Fundamental aspects of coal-water fuel droplet combustion and secondary atomization of coal-water mixtures: Final report: Volume 2, 12:19961 (R;US)
**PARTICLE TRACKS**
**Etching**
Design and development of wide energy neutron REM equivalent spectrometer-dosimeters based on polycarbonates and Cr-39, 12:20977 (R;IL)
**PARTICLES**
*When appropriate use more specific terms listed under CHARGED PARTICLES, ELEMENTARY PARTICLES, and QUASI PARTICLES.*
*See also INTERSTELLAR GRAINS*
*PARTICULATES*
**Natural Convection**
Numerical calculation of the drag force induced by natural convection of spheres at low Grashof numbers, 12:21478 (R;US)
**PARTICULATES**
*Prior to September 1981, this concept was indexed to PARTICLES and AEROSOLS.*
**Aerosol Monitoring**
Aerosol sampling efficiency of 37 mm filter cassettes, 12:21095 (J;US)
**Air Pollution**
Investigation of source-emission PM-10 particulate matter field studies of candidate methods. Final report, 12:21089 (R;US)
Nature of airborne particulates at tropic exposure sites. Final report, November 1982-September 1984, 12:21057 (R;US)
Pilot demonstration of the air-curtain system for fugitive-particle control. Final report, June 1982-August 1986, 12:21088 (R;US)
Supercritical fluid chromatography of polar organic compounds in combustion particulates. Progress report, 28 September 1984-28 December 1985, 12:21070 (R;US)
**Emission**
Bench-scale combustion characterization of cleaned Kentucky No. 9 coals: Final report, 12:19963 (R;US)
**Indoor Air Pollution**
Pilot study of sampling and analysis for polynuclear aromatic compounds in indoor air. Report for 1 February-30 September 1984, 12:21080 (R;US)
**Pneumatic Transport**
Determination of the optimum gas velocity for dilute phase transport of coarse particles in large vertical tubes, 12:20912 (BA;US)
**Removal**
Acoustic agglomeration of power plant fly ash: Semi-annual technical report, 5/6/86 to 11/5/86, 12:19919 (R;US)
Integrated Air Pollution Control System design and cost-estimating model Version 2 (IAPCS2). User's manual. Volume 2. Appendix C, 12:21077 (R;US)
Integrated Air Pollution Control System design and cost-estimating model Version 2 (IAPCS2). user's manual. Volume 1, 12:21078 (R;US)
**PASSIVE SOLAR HEATING SYSTEMS**
**Calculation Methods**
Results of design tool evaluations for passive solar design, 12:20271 (BA;US)
**Demonstration Programs**
Architect's view of the CEC Passive Solar Programme, 12:20257 (RA;GB)
**Design**
Passive solar design in non-domestic buildings, 12:20252 (R;GB)
Results of design tool evaluations for passive solar design, 12:20271 (BA;US)
Simulation of four passive direct gain solar houses in Birmingham by the F-chart method, 12:20261 (RA;GB)
**Flat Plate Collectors**
Performance evaluation of a hybrid solar heating system having a radiant panel slab, 12:20273 (BA;US)
**Heating Load**
Mapping the energy saving potential of passive heating combined with conservation, 12:20277 (BA;US)
**Performance**
Closing the gap between active and passive solar heating, 12:20270 (BA;US)
Performance evaluation of a hybrid solar heating system having a radiant panel slab, 12:20273 (BA;US)
Simulation of solar systems, 12:20266 (RA;GB)
**Research Programs**
Passive solar research and development in Europe, 12:20267 (RA;GB)
**Simulation**
Simulation of four passive direct gain solar houses in Birmingham by the F-chart method, 12:20261 (RA;GB)
Simulation of solar systems, 12:20266 (RA;GB)

**Solar Absorbers**
Review of components for passive solar energy utilization, 12:20258 (RA;GB)
**Thermal Efficiency**
Mapping the energy saving potential of passive heating combined with conservation, 12:20277 (BA;US)
**Thermal Energy Storage Equipment**
A self-pumping vapor system for hybrid space heating, 12:20272 (BA;US)
**Thermal Insulation**
Review of components for passive solar energy utilization, 12:20258 (RA;GB)
**Thermosyphon Effect**
Barra Thermosyphon Air System: Residential and agricultural applications both in Italy and in the UK, 12:20255 (RA;GB)
**Trombe Walls**
Review of components for passive solar energy utilization, 12:20258 (RA;GB)
**Uses**
Barra Thermosyphon Air System: Residential and agricultural applications both in Italy and in the UK, 12:20255 (RA;GB)
**Windows**
Review of components for passive solar energy utilization, 12:20258 (RA;GB)

**PBFA**
*See PARTICLE BEAM FUSION ACCELERATOR*

**PBX DEVICES**
*PBX is essentially the old PDX with a rearrangement of the divertor coils. The resultant plasma is "beam-shaped" with a goal of 10 percent beta. MHD properties will be studied.*
**Plasma Confinement**
Loss of confinement following a sawtooth internal disruption in PBX tokamak, 12:21924 (R;US)
**Plasma Diagnostics**
Observation of z-dependent impurity accumulation in the PBX tokamak, 12:21937 (J;US)
**Plasma Disruption**
Loss of confinement following a sawtooth internal disruption in PBX tokamak, 12:21924 (R;US)

**PION MINUS REACTIONS**
**Capture**
Erratum: isospin dependence of pion absorption on nucleon pairs, 12:21632 (J;US)
**Nuclear Reaction Yield**
Proton, neutron and deuteron yields from different nuclei including separated Li, B, Ni, Sn isotopes, 12:21633 (R;SU;In Russian)

**PION MINUS-PROTON INTERACTIONS**
New results on properties of charmed D/sup 0/ mesons produced in $\pi$/sup -/p interactions at 360 GeV/c, 12:21497 (R;SU;In Russian)
Use of the Ksub(892)sup(*+-) resonance as an indicator of systematic distortions for the 2 meter hydrogen liquid ITEhF chamber, 12:20997 (R;SU;In Russian)
**Analyzing Power**
Analyzing power and transversity cross sections for $\pi^+$p and $\pi^-$p elastic scattering from 471 to 687 MeV/c, 12:21513 (J;US)
**Elastic Scattering**
Analyzing power and transversity cross sections for $\pi^+$p and $\pi^-$p elastic scattering from 471 to 687 MeV/c, 12:21513 (J;US)
**Particle Production**
Study of charm meson production in Tip and pp interactions at 360 Gev/c, 12:21494 (R;FR;In French)

**PION PLUS-PROTON INTERACTIONS**
**Analyzing Power**
Analyzing power and transversity cross sections for $\pi^+$p and $\pi^-$p elastic scattering from 471 to 687 MeV/c, 12:21513 (J;US)
**Elastic Scattering**
Analyzing power and transversity cross sections for $\pi^+$p and $\pi^-$p elastic scattering from 471 to 687 MeV/c, 12:21513 (J;US)

**PION REACTIONS**
*See also PION MINUS REACTIONS*
**Fission**
Fission induced in /sup nat/U, /sup nat/Pb, /sup 197/Au, and /sup 165/Ho by 80 and 100 MeV $\pi$i and $\pi^-$, 12:21652 (J;US)

**PIONIZATION**
**Carbon 12 Reactions**
Subthreshold pion production of 20-100 MeV energy with various projectiles (p, $^3$He, $^{12}$C, $^{16}$O), 12:21619 (R;FR;In French)
**Helium 3 Reactions**
Subthreshold pion production of 20-100 MeV energy with various projectiles (p, $^3$He, $^{12}$C, $^{16}$O), 12:21619 (R;FR;In French)
**MeV Range 10-100**
Subthreshold pion production of 20-100 MeV energy with various projectiles (p, $^3$He, $^{12}$C, $^{16}$O), 12:21619 (R;FR;In French)
**Oxygen 16 Reactions**
Subthreshold pion production of 20-100 MeV energy with various projectiles (p, $^3$He, $^{12}$C, $^{16}$O), 12:21619 (R;FR;In French)
**Proton Reactions**
Subthreshold pion production of 20-100 MeV energy with various projectiles (p, $^3$He, $^{12}$C, $^{16}$O), 12:21619 (R;FR;In French)

**PION-NUCLEON INTERACTIONS**
*See also PION-PROTON INTERACTIONS*
**Bremsstrahlung**
Pion-nucleon bremsstrahlung and $\Delta$ electromagnetic moments, 12:21550 (J;US)

*See also PION MINUS-PROTON INTERACTIONS*
*PION PLUS-PROTON INTERACTIONS*
**Cross Sections**
Preasymptotical corrections to the pomeron exchange, 12:21544 (R;SU)

**PIONS**
*See also PIONS NEUTRAL*
**Form Factors**
Form factors of mesons and meson resonances at small and intermediate momentum transfers Q/sup 2/ in the relativistic quark model, 12:21527 (R;SU)

**Multiple Production**
Relativistic invariant analysis of correlation phenomena in multiple production processes, 12:21535 (RA;SU;In Russian)
**Radiative Decay**
Search for rare muon and pion decay modes with the Crystal Box detector, 12:21508 (R;US)
**PIONS NEUTRAL**
**Photoproduction**
Total cross section of π/sup 0/-meson photoproduction on Be, C, O and Al nuclei in the energy range Esub(γ)=(180-650)MeV without charged particles in final state, 12:21495 (R;SU)
**PIPE JOINTS**
**Ultrasonic Testing**
Immersion ultrasonic nde of tubing pinch welds, 12:20596 (BA;US)
Ultrasonic nondestructive evaluation of tube closure welds, 12:20595 (BA;US)
**PIPELINE QUALITY GAS**
*See HIGH BTU GAS*
**PIPELINES**
**Cleaning**
Evacuation of a residual oil pipeline by inert gas displacement, 12:19985 (J;US)
**Gas Injection**
Evacuation of a residual oil pipeline by inert gas displacement, 12:19985 (J;US)
**PIPERAZINES**
**Radiolysis**
Pulse radiolysis study on electrons trapped in semiclathrates and non-clathrate hydrates, 12:20799 (J;US)
**PIPES**
**Computerized Simulation**
Impact analyses after pipe rupture, 12:20844 (BA;US)
**Creep**
Guidelines for the evaluation of seam-welded steam pipes: Final report, 12:20314 (R;US)
**Impact Tests**
Impact analyses after pipe rupture, 12:20844 (BA;US)
**Inspection**
Guidelines for the evaluation of seam-welded steam pipes: Final report, 12:20314 (R;US)
**Welded Joints**
Guidelines for the evaluation of seam-welded steam pipes: Final report, 12:20314 (R;US)
**PITCHES**
**Waste Product Utilization**
Utilization of synthetic crude processing residues in asphalt blends, 12:20033 (RA;US)
**PLANETARY MAGNETOSPHERES**
**Earth Magnetosphere**
Substorms in the earth's magnetosphere, 12:21418 (J;US)
**Joule Heating**
Substorms in the earth's magnetosphere, 12:21418 (J;US)
**Storms**
Substorms in the earth's magnetosphere, 12:21418 (J;US)
**PLANETARY NEBULAE**
**Chemical Composition**
Planetary nebulae and the interstellar medium, 12:21334 (RA;US)
**Emission Spectra**
Spectral characteristics of dust in carbon rich objects, 12:21371 (RA;US)
**Infrared Spectra**
Infrared spectra of WC10 planetary nebulae nuclei, 12:21333 (RA;US)
Near-infrared spectroscopy of planetary nebulae: how strong is the $H_2$ emission?, 12:21332 (RA;US)
**Polycyclic Aromatic Hydrocarbons**
Infrared spectra of WC10 planetary nebulae nuclei, 12:21333 (RA;US)
**PLANT FOSSILS**
*See FOSSILS*
**PLANT GROWTH REGULATORS**
**Membrane Transport**
Effect of surface and membrane potentials on IAA [indoleactic acid] uptake and binding by zucchini membrane vesicles, 12:21142 (R;US)
**Receptors**
Effect of surface and membrane potentials on IAA [indoleactic acid] uptake and binding by zucchini membrane vesicles, 12:21142 (R;US)

**Charged-Particle Transport**
Influence of a strong laser field on the stopping power for charged test particles in fusion plasmas, 12:21875 (R;BR)
**Electric Conductivity**
TENSOR: A code for computation of the relativistic high frequency conductivity tensor for a magnetized plasma with arbitrary electron distribution function in the "temperature" range of 50-500 KeV: Final report, 12:21929 (R;US)
**Electron Density**
Increase of the density limit in ASDEX by repetitive pellet injection, 12:21987 (RA;DE)
**Entropy**
Entropy production and plasma relaxation, 12:21936 (J;US)
**Heating**
Heating and generation of suprathermal particles at collisionless shocks, 12:21487 (J;US)
**ICR Heating**
Nonlinear ion heating in magnetized plasma by monochromatic low-frequency waves, 12:21941 (J;US)
**Impurities**
Impurity production during ICRF heating, 12:21989 (RA;DE)
Observation of z-dependent impurity accumulation in the PBX tokamak, 12:21937 (J;US)
**JAERI**
Annual report of the Fusion Research Center for the period of April 1, 1984 to March 31, 1985, 12:21999 (R;JP)
**Meetings**
Conference record of the 1984 IEEE international conference on plasma science, 12:21838 (B;US)
**Positron Beams**
Positron deposition in plasmas by positronium beam ionization and transport of positrons in tokamak plasmas, 12:21925 (R;US)
**Reflectivity**
Numerical simulation of reflectometry density measurements in a reversed field pinch, 12:21879 (R;DE)
**Relaxation**
Entropy production and plasma relaxation, 12:21936 (J;US)
**Research Programs**
1985. Progress annual report, 12:21837 (R;FR;In French)
Annual report on theoretical work of the STGI (section de theorie des gaz ionises), 12:21860 (R;FR)
Annual report of the Fusion Research Center for the period of April 1, 1984 to March 31, 1985, 12:21999 (R;JP)
Experimental and theoretical physics. Collection, 12:21616 (R;SU;In Russian)
**Shock Waves**
Heating and generation of suprathermal particles at collisionless shocks, 12:21487 (J;US)
**Spitzer Theory**
Reduction of the general Spitzer-Haerm problem in plasma physics, 12:21876 (R;BR)
**Thermal Conduction**
Integral representation of nonlinear heat transport, 12:21871 (R;JP)
**Transport Theory**
Aspects of turbulent transport in a bounded plasma, 12:21947 (D;US)

PLASMA ACCELERATION
Magnetoacoustic Waves
Theory for resonant ion acceleration by nonlinear magnetosonic fast and slow waves in finite $\beta$ plasmas, 12:21911 (R;JP)
PLASMA CONFINEMENT
*See also INERTIAL CONFINEMENT*
Electric Fields
Monte Carlo estimates of particle and energy confinement times in a bumpy torus and a bumpy square with poloidal electric fields, 12:21932 (J;US)
PLASMA DENSITY
Fluctuations
Microfluctuations and energy diffusion in Tokamaks, 12:21850 (R;FR;In French)
PLASMA DIAGNOSTICS
HAIFA: A modular, fiber-optic coupled, spectroscopic diagnostic for plasmas, 12:21927 (R;US)
Data Acquisition Systems
Intelligent data recorder, 12:21920 (R;JP;In Japanese)
Dye Lasers
Plasma diagnosis by dye laser intracavity absorption: Final report for period January 1, 1982-May 31, 1986, 12:21840 (R;US)
Fluorescence Spectroscopy
Summary abstract: laser-induced fluorescence of metal-atom impurities in a neutral beam, 12:21952 (J;US)
Holography
Classical and holographic interferometry systems combined to document inertial fusion experiments, 12:22007 (R;US)
Interferometry
Classical and holographic interferometry systems combined to document inertial fusion experiments, 12:22007 (R;US)
Microwave Radiation
Geometrical effects in X-mode scattering, 12:21926 (R;US)
Molybdenum Ions
Spectral data for highly ionized molybdenum, Mo VI - Mo XLII, 12:21921 (R;JP)
Soft X Radiation
Study, realization and operation of a fast amplitude selector for X-ray spectrometry in thermonuclear plasma, 12:21861 (R;FR;In French)
Spectrometers
Simple time-resolving Thomson spectrometer, 12:21040 (J;US)
Thomson Scattering
Application of advanced millimeter/far-infrared sources to collective Thomson scattering plasma diagnostics, 12:21957 (J;US)
PLASMA DIODES
*See THERMIONIC DIODES*
PLASMA FOCUS DEVICES
Ion Beams
Simple time-resolving Thomson spectrometer, 12:21040 (J;US)
Plasma Diagnostics
Simple time-resolving Thomson spectrometer, 12:21040 (J;US)
PLASMA HEATING
Alfven Waves
Alfven wave heating in the ideal MHD and Guiding Center Plasma models, 12:21950 (D;US)
Current-Drive Heating
Current drive by asymmetrical heating in a toroidal plasma, 12:21949 (D;US)
Fast wave propagation and minority ion heating current drive in a two ion species tokamak plasma, 12:21951 (D;US)
Neutral Atom Beam Injection
$H^-$ production in a multicusp microwave plasma, 12:22036 (D;US)
PLASMA INSTABILITY
Energy Losses
Microfluctuations and energy diffusion in Tokamaks, 12:21850 (R;FR;In French)
PLASMA OSCILLATIONS
*See PLASMA WAVES*
PLASMA PRODUCTION
Ion Cyclotron-Resonance
Plasma production with rotating ion cyclotron wave excited by Nagoya Type-III antennas in RFC-XX, 12:21912 (R;JP)
PLASMA (QUARK)
*See QUARK MATTER*
PLASMA SCRAPE-OFF LAYER
Inhomogeneous Plasma
Probe measurements of plasma inhomogeneities in the scrape-off layer of ASDEX during LH, 12:21899 (RA;DE)
Meetings
Physics of plasma-wall interactions in controlled fusion, 12:22037 (B;US)
Neutral Particles
Neutral Particle transport, 12:21956 (BA;US)
Plasma Diagnostics
Particle confinement and control in existing tokamaks, 12:22040 (BA;US)
Probes for plasma edge diagnostics in magnetic confinement fusion devices, 12:21953 (BA;US)
Plasma Simulation
Neutral Particle transport, 12:21956 (BA;US)
Particle confinement and control in existing tokamaks, 12:22040 (BA;US)
Plasma models for impurity control experiments, 12:21955 (BA;US)
Plasma transport near material boundaries, 12:21954 (BA;US)
Transport Theory
Plasma transport near material boundaries, 12:21954 (BA;US)
PLASMA SHEET
Magnetohydrodynamics
On the generation of field-aligned plasma flow at the boundary of the plasma sheet, 12:21414 (J;US)
PLASMA SIMULATION
Electric Currents
Plasma current profile monitoring with hybrid wave, 12:21847 (R;FR;In French)
Lower Hybrid Heating
Plasma current profile monitoring with hybrid wave, 12:21847 (R;FR;In French)
M Codes
One-dimensional transport codes MAKOKOT. Presentation and directions for use, 12:21862 (R;FR;In French)
Reviews
Fusion research and plasma physics: A story of paradigms, 12:21931 (R;US)
Transport Theory
One-dimensional transport codes MAKOKOT. Presentation and directions for use, 12:21862 (R;FR;In French)
PLASMA WAVES
Beam-Plasma Systems
Beam-generated waves in a large plasma chamber, 12:21942 (J;US)
Electrons
On electron acceleration with the potential waves excited in a plasma by the strong SHF field, 12:21873 (RA;SU;In Russian)
Frequency Dependence
Beam-generated waves in a large plasma chamber, 12:21942 (J;US)
Interactions
Radiation from nonlinear coupling of plasma waves, 12:21948 (D;US)
Measuring Methods
Beam-generated waves in a large plasma chamber, 12:21942 (J;US)
Stabilization
Search for lower hybrid drift fluctuations in a field-reversed configuration by means of carbon dioxide heterodyne scattering, 12:22033 (D;US)
Stabilisation of sawteeth oscillations by lower hybrid waves in ASDEX, 12:21895 (RA;DE)
PLASTIC SCINTILLATORS
Emission Spectra
Study of the spectral and spatial response of organic plastic scintillators, 12:20973 (R;FR;In French)
PLASTICS
*See also TEFLON*

**Damage**
Damage thresholds of fused silica, plastics and KDP crystals measured with 0.6-ns 355-nm pulses, 12:20886 (BA;US)
**Irradiation**
Damage thresholds of fused silica, plastics and KDP crystals measured with 0.6-ns 355-nm pulses, 12:20886 (BA;US)
**Polishing**
Damage thresholds of fused silica, plastics and KDP crystals measured with 0.6-ns 355-nm pulses, 12:20886 (BA;US)
**Surface Hardening**
Damage thresholds of fused silica, plastics and KDP crystals measured with 0.6-ns 355-nm pulses, 12:20886 (BA;US)

**PLATINUM**
**Physical Radiation Effects**
Ion-beam-mixing in metal-metal systems and metal-silicon systems, 12:20617 (D;US)
**Sorptive Properties**
Chemisorption and reaction studies on well-characterized bimetallic and alloy surfaces: Progress report for period February 1, 1986-January 31, 1987, 12:20534 (R;US)

**PLATINUM ALLOYS**
**Electronic Specific Heat**
Formation and destruction of the heavy-electron ground state in U compounds with $AuBe_5$ crystal structure, 12:20573 (J;US)

Proceedings of the US Nuclear Regulatory Commission fourteenth water reactor safety information meeting: Volume 6, TMI-2 analyses, Fission product release and transport in containment, Severe accident source term, Containment systems research/containment loads analysis, 12:20436 (R;US)
Safety-related topics from the Nuclear Power Options Viability Study, 12:20438 (J;US)
Some failures of diesel generators during commissioning tests of 1300 MWe PWR, 12:20414 (R;FR)
TRAC-PF1/MOD1 computer code and developmental assessment, 12:20443 (J;US)
**Regulations**
Obligations and characteristics applicable to the French unit of the 1400 MWe series. Adaptation to the 900 and 1300 MWe series, 12:20411 (R;FR;In French)
**Steam Generators**
Assessment of sulfur in chemical cleaning of PWR [pressurized water reactor] steam generators: Final report, 12:20332 (R;US)
Development of a method of detection of the contacts and measurement of the proximities in the PWR steam generator tubes bundles, 12:20338 (R;FR)
Fatigue analysis of PWR steam generator tube sheet, 12:20337 (R;FR)
First step of the project for implementation of two non-symmetric cooling loops modeled by the ALMOD3 code, 12:20328 (R;BR;In Portuguese)
Flaw analysis in steam generator tube, 12:20420 (R;FR)
ICONEL 690: a material with improved corrosion resistance for PWR steam generator tubes, 12:20538 (R;FR)
Intergranular attack of alloy 600 in PWR steam generator tubes simulation tests, 12:20326 (R;FR)
Recent progress in SG level control in French PWR plants, 12:20335 (R;FR)
Shot peening of French plants, 12:20344 (R;FR)
Steam generators improvement of separator dryer performance. Design and test program, 12:20334 (R;FR)
Transfer of technology in maintenance tools, 12:20341 (R;FR)
Use of shot-peening to improve stress corrosion resistance of steam generator tubes of PWR nuclear power plants, 12:20343 (R;FR;In French)
**Technology Transfer**
Nuclear engineering and manufacturing technology transfer coproduction with technical assistance, 12:20340 (R;FR)
**Temperature Coefficient**
Measurement of reactivity temperature coefficient by noise method in power reactors. Theory, 12:21023 (R;HU)
**Transients**
TRAC-PF1/MOD1 computer code and developmental assessment, 12:20443 (J;US)

**PWR**
**41 TYPE REACTORS**
*See WESTINGHOUSE STANDARD REACTOR*

**PYRENE**
**Deuteration**
Reactivity of heteroatom-containing organics during liquefaction of subbituminous coal: Quarterly technical progress report, December 15, 1986-March 15, 1987, 12:19905 (R;US)

**PYRIDINE**
**Solvent Properties**
Characterization of a resinite maceral fraction, 12:19914 (R;US)
Pretreatment techniques for coal gasification. Fourth quarterly report, July 1-September 30, 1985, 12:19899 (R;US)

**PYRIDINES**
*See also ACRIDINES*
*BIPYRIDINES*
*PYRIDINE*
*QUINOLINES*
**Auger Electron Spectroscopy**
Localization effects in the Auger spectra of ring nitrogen systems: Pyridine, poly(2-vinyl)pyridine, borazine, and boron nitride, 12:21447 (J;US)
**Electronic Structure**
Localization effects in the Auger spectra of ring nitrogen systems: Pyridine, poly(2-vinyl)pyridine, borazine, and boron nitride, 12:21447 (J;US)
Time-resolved emission at the glass-to-fluid transition. Localization or delocalization in polypyridyl-based metal-to-ligand charge-transfer excited states of ruthenium and osmium?, 12:20754 (J;US)
**Excited States**
Time-resolved emission at the glass-to-fluid transition. Localization or delocalization in polypyridyl-based metal-to-ligand charge-transfer excited states of ruthenium and osmium?, 12:20754 (J;US)
**Phase Transformations**
Time-resolved emission at the glass-to-fluid transition. Localization or delocalization in polypyridyl-based metal-to-ligand charge-transfer excited states of ruthenium and osmium?, 12:20754 (J;US)
**Radiationless Decay**
Time-resolved emission at the glass-to-fluid transition. Localization or delocalization in polypyridyl-based metal-to-ligand charge-transfer excited states of ruthenium and osmium?, 12:20754 (J;US)

PYROLYTIC OILS
Yields
Pretreatment techniques for coal gasification. Fourth quarterly report, July 1-September 30, 1985, 12:19899 (R;US)

## Q

QUALITY ASSURANCE
Records Management
Quality assurance records system for research and development activities in support of geologic repository programs, 12:20127 (R;US)
QUANTUM CHROMODYNAMICS
Confinement
New hypothesis on the nature of quark and gluon confinement, 12:21602 (R;HU)
Corrections
Corrections to the Goldberger-Treiman relation and the QCD condensates, 12:21587 (R;XA)
Electromagnetic Interactions
Towards relativistic electromagnetic baryon couplings motivated by QCD, 12:21521 (R;DE)
Gauge Invariance
Topologically massive chromodynamics at finite temperature, 12:21605 (J;US)
Infrared Divergences
Infrared and collinear divergences in field theory, 12:21593 (R;SU;In Russian)
Instantons
Beta function in supersymmetric gauge theories. Instantons versus traditional approach, 12:21595 (R;SU)
Lattice Field Theory
Phase transitions in QCD-thermodynamics on a lattice, 12:21599 (R;SU;In Russian)
Mass
Topologically massive chromodynamics at finite temperature, 12:21605 (J;US)
Perturbation Theory
Perturbative QCD and jets, 12:21522 (R;FR)
Phase Transformations
Phase transitions in QCD-thermodynamics on a lattice, 12:21599 (R;SU;In Russian)
Quark-Antiquark Interactions
New hypothesis on the nature of quark and gluon confinement, 12:21602 (R;HU)
Reviews
Workshop on non-perturbative quantum chromodynamics, 12:21613 (B;US)
Supersymmetry
Beta function in supersymmetric gauge theories. Instantons versus traditional approach, 12:21595 (R;SU)
Temperature Effects
Topologically massive chromodynamics at finite temperature, 12:21605 (J;US)
Vacuum Polarization
New hypothesis on the nature of quark and gluon confinement, 12:21602 (R;HU)
QUANTUM ELECTRODYNAMICS
Infrared Divergences
Infrared and collinear divergences in field theory, 12:21593 (R;SU;In Russian)
QUANTUM FIELD THEORY
*See also LAGRANGIAN FIELD THEORY*
*LATTICE FIELD THEORY*
*PHI4-FIELD THEORY*
*QUANTUM CHROMODYNAMICS*
*QUANTUM ELECTRODYNAMICS*
*QUANTUM GRAVITY*
Charge Renormalization
Operator product expansion and calculation of the two-loop Gell-Mann-Low function, 12:21598 (R;SU)
Many-Body Problem
Many-body content of quantum gauge theories and its connection to mass generation mechanisms, 12:21611 (RA;SU)
QUANTUM GRAVITY
Wave Packets
Universal master equation for the gravitational violation of quantum mechanics, 12:21798 (R;HU)
QUANTUM MECHANICS
Distribution Functions
Quantum distribution functions in nonequilibrium statistical mechanics, 12:21814 (BA;US)
Feynman Path Integral
Basis set methods for describing the quantum mechanics of a "system" interacting with a harmonic bath, 12:21810 (J;US)
Graded Lie Groups
Accidental degeneracies, hidden supersymmetries, and spectrum-generating superalgebras, 12:21833 (BA;US)
Hamiltonians
Accidental degeneracies, hidden supersymmetries, and spectrum-generating superalgebras, 12:21833 (BA;US)
Langevin Equation
Second-quantized molecular time scale generalized Langevin equation theory: Boson equivalent chain, 12:21809 (J;US)
Supersymmetry
Accidental degeneracies, hidden supersymmetries, and spectrum-generating superalgebras, 12:21833 (BA;US)
QUANTUM OPERATORS
Series Expansion
Operator product expansion and calculation of the two-loop Gell-Mann-Low function, 12:21598 (R;SU)
QUARK MATERIAL
*See QUARK MATTER*
QUARK MATTER
Thermodynamic Properties
Thermodynamic properties of the gluon plasma, 12:21607 (J;US)
Transport Theory
Introduction to quantum chromo transport theory for quark-gluon plasmas, 12:21675 (R;US)
QUARK PLASMA
*See QUARK MATTER*
QUARK SEA
*See QUARK MATTER*
QUARK-ANTIQUARK INTERACTIONS
Annihilation
Cross section for hard processes involving two quarks and four gluons, 12:21556 (J;US)
QUARK-GLUON PLASMA
*See QUARK MATTER*
QUARKS
Bound State
On the existence of stable dimesons, 12:21549 (J;US)
Composite Models
Towards a resolution of certain dilemmas in preon dynamics through local supersymmetry, 12:21548 (J;US)
Exchange Interactions
Quark exchange in nuclei and the European Muon Collaboration effect, 12:21680 (J;US)
Particle Interactions
Cross section for hard processes involving two quarks and four gluons, 12:21556 (J;US)
QUARTZ
Neutron Diffraction
Determination of the Dauphine twinning volume fraction induced in a natural quartz crystal using neutron diffraction, 12:21748 (R;BR;In Portuguese)
QUIESCENT PLASMA
Diffusion
Diffusion in a quiet plasma and enhanced heating and diffusion in a turbulent plasma, 12:21943 (D;US)
Ion Acoustic Waves
Excitation and the propagation of ion acoustic solitons in nonideal plasmas, 12:21945 (D;US)
QUINOLINES
Indoor Air Pollution
Pilot study of sampling and analysis for polynuclear aromatic compounds in indoor air. Report for 1 February-30 September 1984, 12:21080 (R;US)

# R

**RACKS (FUEL)**
*See FUEL RACKS*
**RADIATION BELTS**
**Diffusion**
Eigenfunction methods in magnetospheric radial-diffusion theory. Technical report, 12:21409 (R;US)
Spacecraft in the magnetospheric environment. Final report, 9 November 1981-10 May 1985, 12:21410 (R;US)
**RADIATION BURDEN**
*See RADIATION DOSES*
**RADIATION CHEMISTRY**
**Computerized Simulation**
A model for calculating reactions in irradiated aqueous solutions containing DNA, 12:21226 (BA;US)
**Mathematical Models**
A model for calculating reactions in irradiated aqueous solutions containing DNA, 12:21226 (BA;US)
**RADIATION DETECTORS**

*SHOWER COUNTERS*
**Fabrication**
Development of 58 x 62 Si:Sb detector arrays, 12:21032 (RA;US)
**Meetings**
Proceedings of the Second Infrared Detector Technology Workshop, 12:21024 (R;US)
**Performance**
Proposal to develop BGO modular cameras for radioisotope imaging in nuclear medicine, 12:20732 (RA;JP)
**RADIATION DOSEMETERS**
*See DOSEMETERS*
**RADIATION DOSES**
**Data Covariances**
Sensitivity/uncertainty analysis for the Nagasaki dosimetry reevaluation effort, 12:21202 (R;US)
**I Codes**
Assessing the INTERTRAN code for application in Asian environs. Final report for the period 1 July 1985-30 June 1986, 12:20053 (R;XA)
**R Codes**
Reclear. An evacuation simulation model which calculates radiation doses to the evacuated population, 12:21106 (RA;IL)
**RADIATION EXPOSURE (DOSES)**
*See RADIATION DOSES*
**RADIATION HARDENING (CHEMICAL)**
*See POLYMERIZATION*
**RADIATION HYGIENE**
*See RADIATION PROTECTION*
**RADIATION PROTECTION**
1985. Annual progress report, 12:20416 (R;FR;In French)
**Biomedical Radiography**
Radiological protection in X-ray diagnosis: How to minimize the patient exposure in X-ray diagnosis, 12:21204 (R;BR;In Portuguese)
**Evacuation**
Reclear. An evacuation simulation model which calculates radiation doses to the evacuated population, 12:21106 (RA;IL)
**Shelters**
Effectiveness of protective measures in reducing the radiological effects due to an accident in a nuclear power plant, 12:20422 (RA;IL)
**RADIATION SAFETY**
*See RADIATION PROTECTION*
**RADIATION TRANSPORT**
*See also CHARGED-PARTICLE TRANSPORT*
*NEUTRAL-PARTICLE TRANSPORT*
**B Codes**
BALTORO a general purpose code for coupling discrete ordinates and Monte-Carlo radiation transport calculations, 12:22062 (R;PL)
**RADICALS**
*Not to be used for compound descriptions.*
*See also HYDROPEROXY RADICALS*
*HYDROXYL RADICALS*
**Absorption Spectra**
Transient phenomena in the pulse radiolysis of retinyl polyenes. 6. Radical ions of retinal homologues, 12:20798 (J;US)
**Chemical Reactions**
Transient phenomena in the pulse radiolysis of retinyl polyenes. 6. Radical ions of retinal homologues, 12:20798 (J;US)
**Photochemical Reactions**
Thermal and photochemical reactions of sulfhydryl radicals. Implications for colloid photocorrosion, 12:20789 (J;US)
**RADIOACTIVE AEROSOLS**
**Adsorption**
Moment analysis of the time-dependent transmission of a step-function input of a radioactive gas through an adsorber bed, 12:20806 (J;US)
**Source Terms**
Combustion aerosols formed during burning of radioactively contaminated materials: Experimental results, 12:20139 (R;US)
**RADIOACTIVE BIOLOGICAL WASTES**
*See RADIOACTIVE WASTES*
**RADIOACTIVE EFFLUENTS**
**Environmental Transport**
Mass transport in low permeability rocks under the influence of coupled thermomechanical and hydrochemical effects - an overview, 12:20077 (RA;US)
**Hydrology**
Mass transport in low permeability rocks under the influence of coupled thermomechanical and hydrochemical effects - an overview, 12:20077 (RA;US)
**Temperature Effects**
Mass transport in low permeability rocks under the influence of coupled thermomechanical and hydrochemical effects - an overview, 12:20077 (RA;US)
**Waste-Rock Interactions**
Mass transport in low permeability rocks under the influence of coupled thermomechanical and hydrochemical effects - an overview, 12:20077 (RA;US)
**RADIOACTIVE GASEOUS WASTES**
*See GASEOUS WASTES*
*RADIOACTIVE WASTES*
**RADIOACTIVE MATERIALS**
*See also FISSION PRODUCTS*
*RADIOACTIVE WASTES*
**Road Transport**
Stowing of radioactive materials package during road transport on vehicles of a total weight under 38 tons, 12:20829 (R;FR;In French)
**RADIOACTIVE PARTICULATES**

**RADIOACTIVE WASTE DISPOSAL**
**Accidents**
Safety assessment of accident radiological releases: a study performed for the conceptual design of a geologic repository at Yucca Mountain, Nevada, 12:20135 (J;US)
**Geochemistry**
Geochemistry Review Panel report on the SRP geochemistry program and draft geochemistry summary program plan (May, 1986) and discussion of panel recommendations, 12:20076 (R;US)
**Heat Transfer**
Thermal loading in the near field of repositories for high and intermediate level nuclear waste, 12:20124 (R;CH)

**Underground Disposal**
Database for radionuclide transport in the biosphere: nuclide specific and geographic data for northern Switzerland, 12:20120 (R;CH)
Exploratory borehole Boettstein: Results of isotopic investigations concerning the hydrogeological characterization of deep groundwaters, 12:20117 (R;CH;In German)
Hydrogeologic testing of crystalline rocks during the NAGRA deep drilling program, 12:20118 (R;CH)
Radioecological modelling of the biosphere as illustrated by the example of the model area Oberbauenstock, 12:20122 (R;CH;In German)
Some aspects of the use of iron canisters in deep lying repositories for nuclear waste, 12:20123 (R;CH)
Stripa Project. Annual report 1984, 12:20119 (R;CH)
Synthesis of recent investigations on corrosion behaviour of radioactive waste glasses, 12:20121 (R;CH)
Thermal loading in the near field of repositories for high and intermediate level nuclear waste, 12:20124 (R;CH)

**RADIOACTIVE WASTE FACILITIES**
*See also WIPP*
**Bibliographies**
Bibliography of studies for the Salt Repository Project Office of the Civilian Radioactive Waste Management Program, April 1978-May 1986, 12:20075 (R;US)
**Construction**
Disposal alternatives and recommendations for waste salt management for repository excavation in the Palo Duro Basin, Texas, 12:20060 (R;US)
**Decision Making**
Negotiating through conflict, 12:20070 (RA;US)
Public interest group involvement, 12:20071 (RA;US)
Role of conflict in decision making, 12:20069 (RA;US)
**Evaluation**
DWTF [decontamination and waste treatment facilities] assessment, 12:20132 (R;US)
**Information Dissemination**
How to work through the news media, 12:20073 (RA;US)
**Materials Testing**
Material selection for nuclear waste processing facility, 12:20133 (J;US)
**Operation**
Low-level nuclear waste in Washington State, 12:20074 (RA;US)
**Public Information**
Lessons from past experiences: the critical path - a third party perspective, 12:20064 (RA;US)
**Public Relations**
Barriers to public participation, 12:20068 (RA;US)
**Radioactive Effluents**
Comparison of under-pressure and over-pressure pulse tests conducted in low-permeability basalt horizons at the Hanford Site, Washington state, 12:21242 (RA;US)
Mass transport in low permeability rocks under the influence of coupled thermomechanical and hydrochemical effects - an overview, 12:20077 (RA;US)
**Site Selection**
Barriers to public participation, 12:20068 (RA;US)
Conflict resolution: panel discussion and questions from the audience, 12:20072 (RA;US)
Lessons from past experiences: Texas, 12:20062 (RA;US)
Negotiating through conflict, 12:20070 (RA;US)
Public interest group involvement, 12:20071 (RA;US)
Role of conflict in decision making, 12:20069 (RA;US)
Virginia's experiences in siting radioactive waste facilities, 12:20065 (RA;US)
**Waste Management**
Disposal alternatives and recommendations for waste salt management for repository excavation in the Palo Duro Basin, Texas, 12:20060 (R;US)

**RADIOACTIVE WASTE MANAGEMENT**
Integrated monitored retrievable storage/repository comparative study: Task 5, Engineering study No. 12, 12:20128 (R;US)
**Coordinated Research Programs**
Radioactive waste management technical cooperation program, 1985-1989: Quarterly report to December 1986, 12:20099 (R;US)
**Environmental Impacts**
Remedial action at the Weldon Spring site: Draft Environmental Impact Statement, 12:20137 (R;US)

**RADIOACTIVE WASTE PROCESSING**
Innovative HEPA [high-efficiency particulate air] filter designs to reduce waste generation and simplify waste treatment, 12:20126 (R;US)
**Coordinated Research Programs**
Cooperation of Nuclear Power Plant Research Institute and Nuclear Research Institute in disposal of radioactive wastes from nuclear power plants, 12:20115 (RA;CS;In Slovak)
**Equipment**
Work by VUCHZ Brno on problems of radioactive waste disposal and the fluoride process for spent fuel reprocessing, 12:20110 (RA;CS;In Czech)
**Hot Cells**
Development of a evaluation code for radioactive source residing in the vitrification apparatus, 12:20116 (R;JP;In Japanese)
**Radioactive Waste Facilities**
Tank farm processing of high-level waste for the Defense Waste Processing Facility, 12:20103 (R;US)
**Solidification**
Prospects of development for radioactive waste solidification techniques, 12:20112 (RA;CS;In Czech)
Scientific conference proceedings. Session 3. Radiochemical technology, 12:20109 (R;CS;In Czech and Slovak)

Fragmentation of one-quasiparticle states in sup(153, 155)Sm and sup(153, 155)Eu, 12:21668 (RA;SU;In Russian)
**SAMARIUM FLUORIDES**
**Damage**
Recent damage results on high reflector coatings at 355 nm, 12:20883 (BA;US)
Recent damage results for antireflection coatings at 355 nm, 12:20884 (BA;US)
**Dielectric Properties**
Recent damage results on high reflector coatings at 355 nm, 12:20883 (BA;US)
Recent damage results for antireflection coatings at 355 nm, 12:20884 (BA;US)
**Irradiation**
Recent damage results on high reflector coatings at 355 nm, 12:20883 (BA;US)
Recent damage results for antireflection coatings at 355 nm, 12:20884 (BA;US)
**Optical Properties**
Recent damage results for antireflection coatings at 355 nm, 12:20884 (BA;US)
**Vacuum Coating**
Recent damage results on high reflector coatings at 355 nm, 12:20883 (BA;US)
Recent damage results for antireflection coatings at 355 nm, 12:20884 (BA;US)
**SAMPLE HOLDERS**
**Design**
Design parameters for differentially pumped rotating platforms, 12:20840 (J;US)
Quick temperature cycling sample holder for ultrahigh vacuum surface studies, 12:20837 (J;US)
**Fabrication**
Quick temperature cycling sample holder for ultrahigh vacuum surface studies, 12:20837 (J;US)
**Performance**
Design parameters for differentially pumped rotating platforms, 12:20840 (J;US)
**SAMPLERS**
*See also AIR SAMPLERS*
**Field Tests**
Investigation of source-emission PM-10 particulate matter field studies of candidate methods. Final report, 12:21089 (R;US)
**Performance**
Comparison of polyurethane foam and XAD-2 resin as collection media for polynuclear aromatic hydrocarbons in air. Report for 1 August 1985-31 May 1986, 12:21084 (R;US)
**Site Selection**
Siting criteria for regionally located-wet deposition collection sites, 12:21082 (R;US)
**SANDSTONES**
**Diagenesis**
Petrologic aspects of some bitumen-bearing sandstones from Sunnyside, Utah, 12:19999 (RA;US)
**Electric Conductivity**
Laboratory-determined transport properties of Berea sandstone, 12:21272 (J;US)
**Permeability**
Laboratory-determined transport properties of Berea sandstone, 12:21272 (J;US)
**Reservoir Engineering**
Tight-gas sands evaluation and technology development. Final report, May 1982-July 1986, 12:19992 (R;US)
**Wave Propagation**
Laboratory-determined transport properties of Berea sandstone, 12:21272 (J;US)
**SANITARY LANDFILLS**
**Drainage**
Geotextiles for drainage, gas venting, and erosion control at hazardous waste sites. Final report 1981-1985, 12:21122 (R;US)
**Erosion Control**
Geotextiles for drainage, gas venting, and erosion control at hazardous waste sites. Final report 1981-1985, 12:21122 (R;US)
**Leachates**
Characterization of a landfill-derived contaminant plume in glacial and bedrock aquifers, NE Illinois, 12:21133 (R;US)
**SAPPHIRE**
**Ion Implantation**
Characterizing the hardness and modulus of thin films using a mechanical properties microprobe, 12:20916 (R;US)
**SAVANNAH RIVER PLANT**
**Radioactive Waste Processing**
Material selection for nuclear waste processing facility, 12:20133 (J;US)
**Reprocessing**
Reprocessing of nuclear fuels at the Savannah River Plant, 12:20046 (R;US)
**SCALAR FIELDS**
**Casimir Operators**
Scalar Casimir energies in $M^4 \cong$/sup N/ for even N, 12:21603 (J;US)
**Many-Dimensional Calculations**
Scalar Casimir energies in $M^4 \cong$/sup N/ for even N, 12:21603 (J;US)

SCANDIUM
Autoionization
Summary abstract: autoionization emission from transition metals: an electron stimulated analog of resonant photoemission, 12:20607 (J;US)

Influence of microstructure on the photoconductivity of glow discharge deposited amorphous SiC:H and amorphous SiGe:H alloys, 12:20215 (RA;US)
**Graded Band Gaps**
Amorphous Si-Ge alloys made from ($SiH_4$ + $GeH_4$) and ($SiF_4$ + $GeF_4$ + $H_2$): a comparison, 12:20213 (RA;US)
Electrochemical photocapacitance spectroscopy of amorphous silicon alloy materials, 12:20207 (RA;US)
**Health Hazards**
Potential health and safety hazards associated with the manufacture of amorphous silicon and copper indium diselenide photovoltaic cells, 12:20239 (BA;US)
**Image Processing**
Review of amorphous silicon TFT and integrated image sensor, 12:20222 (RA;US)
**Impurities**
Electronic processes in thin film PV materials, 12:20221 (RA;US)
**Ion Implantation**
Glow-discharge-implanted, thermally annealed, oxide-passivated silicon solar cells of 19% efficiency, 12:20228 (J;US)
**Manufacturing**
GSI's continuous multichamber approach for mass production of amorphous silicon solar cells, 12:20227 (RA;US)
Sensitivity analysis for solar panels, 12:20186 (RA;US)
**Market**
Silicon requirements of the photovoltaic solar cell market, 12:20201 (RA;US)
**Materials**
Characterization of solar-grade silicon produced by the $SiF_4$-Na process, 12:20197 (RA;US)
Development of the silane process for the production of low-cost polysilicon, 12:20187 (RA;US)
Economics of polysilicon process-A view from Japan, 12:20184 (RA;US)
Economics of polysilicon processes, 12:20185 (RA;US)
Fluidized-bed development at JPL, 12:20188 (RA;US)
Fluidized-bed reactor modeling for production of silicon by silane pyrolysis, 12:20189 (RA;US)
Influence of microstructure on the photoconductivity of glow discharge deposited amorphous SiC:H and amorphous SiGe:H alloys, 12:20675 (J;US)
Metallurgical route to solar-grade silicon, 12:20195 (RA;US)
Processes and process developments in Japan, 12:20191 (RA;US)
Processes and process development in Taiwan, 12:20192 (RA;US)
Refining of metallurgical-grade silicon, 12:20193 (RA;US)
Semiconductor market, 12:20200 (RA;US)
Silane-based polysilicon process, 12:20198 (RA;US)
Silicon production in an aerosol reactor, 12:20190 (RA;US)
Silicon purification using a Cu-Si alloy source, 12:20199 (RA;US)
Silicon requirements of the photovoltaic solar cell market, 12:20201 (RA;US)

Solar-grade silicon prepared by carbothermic reduction of silica, 12:20194 (RA;US)
Solar silicon from directional solidification of MG silicon produced via the silicon carbide route, 12:20196 (RA;US)
**Mathematical Models**
Numerical solutions, physical interpretations, and analytical models for amorphous silicon P/I/N solar cells, 12:20208 (RA;US)
The influence of terrestrial solar spectra on the performance of selected single and multijunction solar cells, 12:20238 (BA;US)
**Microstructure**
Influence of microstructure on the photoconductivity of glow discharge deposited amorphous SiC:H and amorphous SiGe:H alloys, 12:20215 (RA;US)
Structural and electronic studies of defects in amorphous silicon, 12:20220 (RA;US)
**Occupational Safety**
Potential health and safety hazards associated with the manufacture of amorphous silicon and copper indium diselenide photovoltaic cells, 12:20239 (BA;US)
**Optical Properties**
Effects of band bending on the electrical and photo-electronic properties of a-Si:H and a-Ge:H thin films in surface cell structures, 12:20214 (RA;US)
**Performance**
Effects of impurities on silicon solar-cell performance, 12:20182 (RA;US)
**Photoconductivity**
Characterization of light-induced effects in amorphous silicon alloy materials, 12:20206 (RA;US)
Influence of microstructure on the photoconductivity of glow discharge deposited amorphous SiC:H and amorphous SiGe:H alloys, 12:20215 (RA;US)
Investigation of light-induced defect creation in a-Si:H using junction capacitance methods, 12:20218 (RA;US)
**Quality Control**
Laser in situ diagnostics and process modeling of glow discharge amorphous silicon deposition, 12:20209 (RA;US)
**Raman Spectroscopy**
Laser in situ diagnostics and process modeling of glow discharge amorphous silicon deposition, 12:20209 (RA;US)
**Research Programs**
Amorphous silicon PV R & D activities in Europe, 12:20217 (RA;US)
Characterization of light-induced effects in amorphous silicon alloy materials, 12:20206 (RA;US)
Current status of multijunction devices fabricated from fluorinated amorphous silicon-based alloys, 12:20226 (RA;US)
Development of high efficiency single junction amorphous silicon solar cells and submodules, 12:20224 (RA;US)
Development of high performance large-area amorphous silicon solar cells, 12:20225 (RA;US)
GSI's continuous multichamber approach for mass production of amorphous silicon solar cells, 12:20227 (RA;US)
Recent status of photovoltaic materials & their prospects in China, 12:20210 (RA;US)
Silicon Material Task of the DOE/FSA Project, 12:20181 (RA;US)
**Semiconductor Junctions**
The influence of terrestrial solar spectra on the performance of selected single and multijunction solar cells, 12:20238 (BA;US)
**Structural Chemical Analysis**
Amorphous Si-Ge alloys made from ($SiH_4$ + $GeH_4$) and ($SiF_4$ + $GeF_4$ + $H_2$): a comparison, 12:20213 (RA;US)
**Testing**
Autonomous circuit for the measurement of photovoltaic-device parameters. Master's thesis, 12:20177 (R;US)
**Thin Films**
New generation photovoltaic technologies, 12:20235 (BA;US)
**Vapor Deposited Coatings**
Photo-chemical vapor deposition of hydrogenated amorphous silicon photovoltaic devices, 12:20211 (RA;US)
Studies of chemical vapor deposition of amorphous silicon and transparent electrodes for solar cells, 12:20212 (RA;US)

**SILICOSIS**

Proceedings: Workshop on solar applications of energy conversion technology, 12:20248 (R;US)
**Reviews**
Current status and future needs in solar thermal power systems, 12:20250 (BA;US)
**SOLAR TRACKING SYSTEMS**
**Performance**
Evaluation of a heliostat tracker for linear Fresnel lens photovoltaic concentrators, 12:20203 (R;US)
**SOLAR WATER HEATERS**
**Building Codes**
System performance for revision of BS 5918:1980, 12:20254 (RA;GB)
**Data Acquisition Systems**
Data-acquisition from thermosyphon solar-energy water heaters for a terrace of three dwellings, 12:20256 (RA;GB)
**Design**
Further development of the Cardiff Solar Energy Unit's design method, 12:20263 (RA;GB)
**Forecasting**
System performance for revision of BS 5918:1980, 12:20254 (RA;GB)
**Performance**
Closing the gap between active and passive solar heating, 12:20270 (BA;US)
Further development of the Cardiff Solar Energy Unit's design method, 12:20263 (RA;GB)
System performance for revision of BS 5918:1980, 12:20254 (RA;GB)
**Solar Collectors**
Thermal performance comparisons for solar hot water systems subjected to various collector array flow rates, 12:20275 (BA;US)
**Thermosyphon Effect**
Data-acquisition from thermosyphon solar-energy water heaters for a terrace of three dwellings, 12:20256 (RA;GB)
**SOLAR WIND**
**Plasma Waves**
Electron cyclotron harmonic waves observed by the AMPTE-IRM (active magnetospheric particle tracer explorers-ion release module) plasma wave experiment following a lithium release in the solar wind. Technical report, 12:21404 (R;US)
**Radiation Streaming**
Global aspects of stream evolution in the solar wind, 12:21401 (J;US)
**Variations**
Global aspects of stream evolution in the solar wind, 12:21401 (J;US)
**SOLID ELECTROLYTES**
**Mechanical Properties**
Solid electrolyte degradation with applied stress, 12:20710 (J;GB)
**Research Programs**
[Novel polymeric LIT and divalent cation fast ion conducting materials]: Annual technical report ($LiF-PbF_2-Al(PO_3)_3$ glass; $Na_2O-V_2O_5-TeO_2$), 12:20656 (R;US)
**Stresses**
Solid electrolyte degradation with applied stress, 12:20710 (J;GB)
**SOLID STATE LASERS**
*See also NEODYMIUM LASERS*
**Laser Materials**
Development of high strength state laser materials, 12:20876 (J;US)
Optical properties of $Cr^{3+}$ in fluorite-structure hosts and in $MgF^*_2$, 12:20857 (J;US)
**SOLIDIFICATION**
**Research Programs**
Prospects of development for radioactive waste solidification techniques, 12:20112 (RA;CS;In Czech)
**SOLIDS**
**Compression**
Nothing, that pretended to be metal: Who held back development of an important direction in physics for a decade and how, 12:20529 (TJ;US)
**Exchange Interactions**
Tunneling exchange, supersymmetry, and Riccati equations, 12:21763 (J;US)
**Ion Microscopy**
Analysis of solid surfaces using a pulsed-laser time-of-flight atom-probe, 12:20922 (J;US)
**Tunnel Effect**
Tunneling exchange, supersymmetry, and Riccati equations, 12:21763 (J;US)
**SOLID-STATE PLASMA**
**Electric Conductivity**
Electrical conductivity of a strongly coupled plasma, 12:21765 (J;US)
**SOLITONS**
**Ion Acoustic Waves**
Excitation and the propagation of ion acoustic solitons in nonideal plasmas, 12:21945 (D;US)
**Quantum Field Theory**
Soliton excitations in a class of nonlinear field theory models, 12:21610 (RA;SU;In Russian)
**SOLUTION MINING**
**Quality Control**
Radiometric systems for controlling sorption and elution, 12:20986 (RA;CS;In Czech)
**SOLVENT EXTRACTION**
*See also SUPERCRITICAL GAS EXTRACTION*
**Yields**
Pretreatment techniques for coal gasification. Fourth quarterly report, July 1-September 30, 1985, 12:19899 (R;US)
**SOMATIC CELLS**

Propulsion Systems
High- and low-thrust propulsion systems for the space station, 12:20512 (R;US)
SPACE WEAPONS
Ballistic Missile Defense
Monte Carlo Layered Defense Model. Final report, 12:20523 (R;US)
Robust Preallocated Preferential Defense Model, 12:20522 (R;US)
Value of area defense impact-point prediction in a two-layer defense with perfect attackers and defenders. Final report, 12:20524 (R;US)
SPACE-TIME
Mathematical Manifolds
Manifold and supermanifold: global aspects of supermanifold theory, 12:21818 (BA;US)
Supersymmetry
Manifold and supermanifold: global aspects of supermanifold theory, 12:21818 (BA;US)
SPAIN
*See also CANARY ISLANDS*
Reactor Operators
Qualification, training, licensing and retraining of operating shift personnel in nuclear power plants. Presentation of different procedures in the countries of the European Community, Spain, Sweden, Switzerland and the USA, 12:20324 (R;FR)
Research Programs
Activities of the National Mining Research Institutes of ECE countries and exchange of scientific, technical and economic information relating to the coal industry, 12:19941 (R;XU)
Authority and responsibility of advisory bodies and project assessment procedures to support decisions on research and development priorities and programs, 12:19952 (R;XU)
Surface Mining
Improvement of reliability of opencast mining techniques in difficult geological, mining and climatic conditions, 12:19951 (R;XU)
Underground Mining
Drivage, development and support of roadways and faces in deep mines and, consequently, in more difficult mining, geological and atmospheric conditions, 12:19938 (R;XU)
SPARK IGNITION ENGINES
Combustion Kinetics
Direct measurement of the turbulent burning velocity in a homogeneous-charge engine, 12:20518 (B;US)
Fuel Consumption
Cylinder cut-off in an Otto-engine, 12:20517 (R;DE;In German)
Ignition Quality
Influence of the fuel-air ratio at the spark plug on the flame initiation phase, 12:20516 (R;DE;In German)
Performance
Cylinder cut-off in an Otto-engine, 12:20517 (R;DE;In German)

Modifications
Modification of a Scintrex UA-3 Uranium Analyzer for glovebox use, 12:21036 (R;US)
Performance Testing
XRF of Zn and Pb in ores using radioactive source excitation. Final report for the period 1 June 1983-31 March 1986, 12:20981 (R;XA)
Uses
Modification of a Scintrex UA-3 Uranium Analyzer for glovebox use, 12:21036 (R;US)
SPENT FUEL CASKS
Design
A simplified modeling technique for the thermal analysis of spent nuclear assemblies, 12:20057 (R;US)
Fracture Mechanics
A study of ductile cast iron for use as a spent nuclear fuel shipping cask, 12:20843 (BA;US)
Impact Tests
A study of ductile cast iron for use as a spent nuclear fuel shipping cask, 12:20843 (BA;US)
S Codes
Automated shielding analysis sequences for spent fuel casks, 12:20049 (R;US)
Shielding
Automated shielding analysis sequences for spent fuel casks, 12:20049 (R;US)
SPENT FUEL ELEMENTS
Natural Convection
Heat transfer investigations within dry spent fuel casks. Final report for the period 1 November 1981-31 March 1986, 12:20897 (R;XA)
Radiant Heat Transfer
Heat transfer investigations within dry spent fuel casks. Final report for the period 1 November 1981-31 March 1986, 12:20897 (R;XA)
Thermal Conduction
Heat transfer investigations within dry spent fuel casks. Final report for the period 1 November 1981-31 March 1986, 12:20897 (R;XA)
SPENT FUEL STORAGE
*See also DRY STORAGE*
*MONITORED RETRIEVABLE STORAGE*
Fuel Racks
High density aseismic spent fuel storage racks, 12:20052 (R;FR)
SPENT FUELS
Criticality
Experimental criticality program to optimize pool storage and transport casks of PWR type fuel assemblies taking into account their burnup. Phase 1: feasibility study, 12:20824 (R;FR;In French)
Oxidation
Effect of burnup level on oxidation of LWR [light-water reactor] spent fuel, 12:20056 (R;US)
Quantitative Chemical Analysis
MCNP analysis of the LSTDS system to determine its feasibility as a spent fuel assay device, 12:20048 (D;US)

**Reprocessing**
Scientific conference proceedings. Session 3. Radiochemical technology, 12:20109 (R;CS;In Czech and Slovak)
**SPENT SHALES**
**Chemical Effluents**
Western Research Institute environmental research, 12:20037 (RA;US)
**Chemical Properties**
Role of shale type and process parameters in the formation and behavior of spent shale wastes, 12:20039 (RA;US)
**Environmental Impacts**
Role of shale type and process parameters in the formation and behavior of spent shale wastes, 12:20039 (RA;US)
**Leaching**
Field and laboratory leaching studies of Kentucky oil shales: progress report of laboratory studies, 12:20040 (RA;US)
**Physical Properties**
Role of shale type and process parameters in the formation and behavior of spent shale wastes, 12:20039 (RA;US)
**Waste Disposal**
Field and laboratory leaching studies of Kentucky oil shales: progress report of laboratory studies, 12:20040 (RA;US)
**SPHERES**
**Natural Convection**
Numerical calculation of the drag force induced by natural convection of spheres at low Grashof numbers, 12:21478 (R;US)
**SPHEROMAK DEVICES**
**MHD Equilibrium**
Magnetohydrodynamic stability of spheromak plasma in spheroidal flux conserver. Application of Mercier criterion, 12:21907 (R;JP)
**Stability**
Magnetohydrodynamic stability of spheromak plasma in toroidal flux conserver with rectangular cross section. 2. Application of Mercier criterion, 12:21903 (R;JP)

**Absorption Spectra**
Transient phenomena in the pulse radiolysis of retinyl polyenes. 6. Radical ions of retinal homologues, 12:20798 (J;US)
**Adsorption**
Investigation of an anion exchange resin for cleanup of a coolant used to machine nuclear materials, 12:20740 (J;US)
**Charge Distribution**
Theoretical investigation of Na and Mg atom complexes with $H_2O$, 12:20764 (J;US)
**Chemical Reaction Kinetics**
Isopiestic measurements of the osmotic and activity coefficients for the system HClO/sub 4/-Ba(ClO/sub 4/)/sub 2/-H/sub 2/O at 25°C, 12:20778 (J;US)
**Chemical Reaction Yield**
Studies of initial reaction steps in the gasification of coal: Final report, October 1983-September 1985, 12:19898 (R;US)
**Chemical Reactions**
Transient phenomena in the pulse radiolysis of retinyl polyenes. 6. Radical ions of retinal homologues, 12:20798 (J;US)
**Density**
Structure of high-density water at constant temperature, 12:20759 (J;US)
**Desorption**
Investigation of an anion exchange resin for cleanup of a coolant used to machine nuclear materials, 12:20740 (J;US)
**Dissociation**
Classical trajectory study of laser-induced dissociation dynamics in triatomic molecules, 12:20794 (J;US)
**Dynamics**
Classical trajectory study of laser-induced dissociation dynamics in triatomic molecules, 12:20794 (J;US)
**Equations of State**
Spherical explosions and the equation of state of water, 12:21046 (R;US)
**Interfaces**
Interfacial tensions and phase behavior of alcohol-hydrocarbon-water-sodium chloride systems, 12:20766 (J;US)
**Ion Exchange Chromatography**
Investigation of an anion exchange resin for cleanup of a coolant used to machine nuclear materials, 12:20740 (J;US)
**Molecular Structure**
Structure of high-density water at constant temperature, 12:20759 (J;US)
Theoretical investigation of Na and Mg atom complexes with $H_2O$, 12:20764 (J;US)
**Osmosis**
Isopiestic measurements of the osmotic and activity coefficients for the system HClO/sub 4/-Ba(ClO/sub 4/)/sub 2/-H/sub 2/O at 25°C, 12:20778 (J;US)
**Phase Studies**
Interfacial tensions and phase behavior of alcohol-hydrocarbon-water-sodium chloride systems, 12:20766 (J;US)
**Solvent Properties**
Determination of the effect of carbon dioxide/water on physical and chemical properties of coal: Final report, 12:19890 (R;US)
**Surface Tension**
Interfacial tensions and phase behavior of alcohol-hydrocarbon-water-sodium chloride systems, 12:20766 (J;US)
**Vibrational States**
Theoretical investigation of Na and Mg atom complexes with $H_2O$, 12:20764 (J;US)
**Wave Propagation**
Effect of submerged obstacles on circular fronts propagating into water at rest, 12:21737 (R;XA)

# X

XENON
Adsorption
Low-temperature structures of Xe on graphite in the one- to two-layer regime, 12:20653 (R;US)
Photoionization
Four-photon excitation of even-parity Rydberg states in krypton and xenon, 12:21457 (J;US)
Photon-Atom Collisions
Interplay between dielectric screening and core hole relaxation in soft x-ray absorption, 12:21477 (J;GB)
Pion Plus Reactions
Manifestation of narrow maximum in the impulse distribution of $\pi$ mesons from the $\pi$/sup +/+A(C,Xe)->$\pi$/sup +-/+kp(k=0,1,2...)+A' reactons, 12:21635 (R;SU;In Russian)
Rydberg States
Four-photon excitation of even-parity Rydberg states in krypton and xenon, 12:21457 (J;US)
XENON 129 REACTIONS
Transfer Reactions
Dependence of actinide production on the mass number of the projectile: Xe +/sup 248/Cm, 12:21659 (J;US)
XENON 132 REACTIONS
Transfer Reactions
Dependence of actinide production on the mass number of the projectile: Xe +/sup 248/Cm, 12:21659 (J;US)
XENON 136 REACTIONS
Transfer Reactions
Dependence of actinide production on the mass number of the projectile: Xe +/sup 248/Cm, 12:21659 (J;US)
XENON COMPLEXES
Multi-Photon Processes
Multiphoton spectroscopy of X—NO (X = Kr, Xe, $CH_4$) van der Waals molecules, 12:21449 (J;US)
Photoionization
Multiphoton spectroscopy of X—NO (X = Kr, Xe, $CH_4$) van der Waals molecules, 12:21449 (J;US)
XENON IONS
Collisions
Secondary-ion emission from clean and oxidized aluminum as a function of incident ion mass and energy, 12:20567 (J;US)
X-RASERS
*See X-RAY LASERS*
X-RAY DIFFRACTION
Sample Holders
Fixture for supporting and aligning a sample to be analyzed in an X-ray diffraction apparatus, 12:20737 (P;US)
X-RAY LASERS
2l-3l' and 2l-4l' transitions in heliumlike and hydrogenlike silicon, 12:21465 (J;US)
Acceleration
Free electron laser and laser electron accelerations based on the mega-gauss magnetic fields in laser produced plasmas, 12:21866 (RA;IL)
Emission Spectra
Stimulated soft x-ray emission in a confined plasma column, 12:20873 (J;US)
Gain
Stimulated soft x-ray emission in a confined plasma column, 12:20873 (J;US)
Soft X Radiation
Stimulated soft x-ray emission in a confined plasma column, 12:20873 (J;US)
X-RAY SOURCES
*For cosmic sources of x radiation use COSMIC X-RAY SOURCES.*
Calibration Standards
Reference X-ray sources based on radionuclides (Radionuclides: /sup 44/Ti + /sup 44/Sc, /sup 54/Mn, /sup 55/Fe, /sup 57/Co, /sup 65/Zn, /sup 109/Cd, /sup 207/Bi, /sup 241/Am), 12:20158 (RA;SU;In Russian)
X-RAY SPECTROMETERS
Multi-Channel Analyzers
Study, realization and operation of a fast amplitude selector for X-ray spectrometry in thermonuclear plasma, 12:21861 (R;FR;In French)
XYLENES
Chemical Preparation
Structure, interaction, and growth of sodium dodecyl-o-xylenesulfonate micelles in aqueous solutions, 12:20758 (J;US)
Molecular Structure
Structure, interaction, and growth of sodium dodecyl-o-xylenesulfonate micelles in aqueous solutions, 12:20758 (J;US)

SUSY non-Abelian gauge models: exact beta function from one loop of perturbation theory, 12:21597 (R;SU)
Supersymmetry
Supersymmetry in a space with auxilliary dimensions, 12:21594 (R;SU)
SUSY non-Abelian gauge models: exact beta function from one loop of perturbation theory, 12:21597 (R;SU)
YEASTS
Biological Radiation Effects
Development of a defined-sequence DNA system for use in DNA misrepair studies, 12:21151 (BA;US)
DNA Repair
Development of a defined-sequence DNA system for use in DNA misrepair studies, 12:21151 (BA;US)
Plasmids
Development of a defined-sequence DNA system for use in DNA misrepair studies, 12:21151 (BA;US)
YIELD (BIOLOGICAL)
*See PRODUCTIVITY*
YTTERBIUM 152
Beta-Plus Decay
Investigation of A = 152 radioactivities with mass-separated sources: Identification of /sup 152/Lu, 12:21646 (J;US)
YTTERBIUM 166
E2-Transitions
Lifetime measurements of high-spin states in /sup 166/Yb, 12:21653 (J;US)
Yrast States
Lifetime measurements of high-spin states in /sup 166/Yb, 12:21653 (J;US)
YTTERBIUM ALLOYS
Electric Conductivity
Strong electronic correlations in a new class of Yb-based compounds: $YbXCu_4$ (X = Ag,Au,Pd), 12:20566 (J;US)
Electron Correlation
Strong electronic correlations in a new class of Yb-based compounds: $YbXCu_4$ (X = Ag,Au,Pd), 12:20566 (J;US)
Magnetic Susceptibility
Strong electronic correlations in a new class of Yb-based compounds: $YbXCu_4$ (X = Ag,Au,Pd), 12:20566 (J;US)
Specific Heat
Strong electronic correlations in a new class of Yb-based compounds: $YbXCu_4$ (X = Ag,Au,Pd), 12:20566 (J;US)
YTTRIUM
Removal
Disposal of low-level radioactive waste using high-calcium fly ash. Final report, 12:20098 (R;US)

YTTRIUM 87
Nuclear Structure
Some high spin states shell model studies in the 88 ≦A≦ 100 region, 12:21688 (BA;US)
Yrast States
Some high spin states shell model studies in the 88 ≦A≦ 100 region, 12:21688 (BA;US)
YTTRIUM ALUMINIUM GARNETS
*See ALUMINIUM OXIDES*
*FERRITE GARNETS*
*YTTRIUM COMPOUNDS*
YTTRIUM COMPOUNDS
*See also YTTRIUM OXIDES*
Ferromagnetic Resonance
Behaviour of frequences of antiferromagnetic resonance in YFeO/sub 3/ in magnetic field, 12:21744 (RA;SU;In Russian)
Moessbauer Effect
Study of distant magnetic order effect on Fesup(3+) cation vibrations in Usub(3)Fesub(5-x)Gdsub(x)Osub(12) ferrite garnets by NGR method, 12:21746 (RA;SU;In Russian)
YTTRIUM OXIDES
Chemical Preparation
Synthesis of alumina-zirconia powders by sol-gel processing, 12:20630 (R;US)
YUGOSLAVIA
Laboratories
Authority and responsibility of advisory bodies and project assessment procedures to support decisions on research and development priorities and programmes, 12:19948 (R;XU)
Research Programs
Activities of the National Mining Research Institute of ECE countries and exchange of scientific, technical and economic information relating to the coal industry, 12:19940 (R;XU)
Authority and responsibility of advisory bodies and project assessment procedures to support decisions on research and development priorities and programmes, 12:19948 (R;XU)
Surface Mining
Improvement of reliability of opencast mining techniques in difficult geological, mining and climatic conditions, 12:19947 (R;XU)
Underground Mining
Drivage, development and support of roadways and faces in deep mines and, consequently, in more difficult mining, geological and atmospheric conditions, 12:19939 (R;XU)

## Z

Z NEUTRAL BOSONS
*Prior to October 1985 this concept was indexed to INTERMEDIATE VECTOR BOSONS.*
Leptonic Decay
On the possibility of non-weak interactions of neutrinos, 12:21546 (R;SU)
ZEA MAYS
*See MAIZE*
ZINC
Emission Spectroscopy
Spectrographic determination of impurities in beryllium oxide, 12:20730 (R;BR;In Portuguese)
Water Pollution
Seasonal variability in Prickly Pear Creek water quality and macroinvertebrate communities, 12:21130 (R;US)
X-Ray Fluorescence Analysis
XRF of Zn and Pb in ores using radioactive source excitation. Final report for the period 1 June 1983-31 March 1986, 12:20981 (R;XA)
ZINC SULFIDES
Damage
Predamage threshold electron emission from insulator and semiconductor surfaces, 12:20880 (BA;US)
Electron Emission
Predamage threshold electron emission from insulator and semiconductor surfaces, 12:20880 (BA;US)
Thermionic Emission
Predamage threshold electron emission from insulator and semiconductor surfaces, 12:20880 (BA;US)
ZINC TELLURIDES
Light Scattering
Light scattering from oxygen in ZnTe, 12:20697 (J;US)
Oxygen Additions
Light scattering from oxygen in ZnTe, 12:20697 (J;US)
ZIRCALOY 2
Stresses
Influence of texture on the interpretation of diffraction data to determine residual stress, 12:20611 (J;US)
ZIRCON
Radiation Effects
Study of the natural α-recoil damage in zircon by infrared spectra, 12:20800 (J;GB)
ZIRCONIUM
Catalytic Effects
Novel Fischer-Tropsch slurry catalysts and process concepts for selective transportation fuel production: Quarterly technical progress report, 1 January-31 March 1986, 12:19904 (R;US)
Emission Spectroscopy
Spectrographic determination of Nb, Hf, Mo, Ta, Ti, V, W and Zr in uranuim compounds, 12:20729 (R;BR;In Portuguese)
Purification
Purification of zirconium by electrotransport processing, 12:20612 (J;US)
ZIRCONIUM 90 TARGET
Lithium 6 Reactions
Study on the /sup 90/Zr(/sup 6/Li,/sup 6/He)/sup 90/Nb reaction at Esub(sup(6) Li) = 93 MeV, 12:21643 (R;SU;In Russian)
ZIRCONIUM 95
Isotope Production
Production of /sup 91/Nb, /sup 94/Nb, and /sup 95/Nb from Mo by 14.5—14.8 MeV neutrons, 12:22018 (J;US)
ZIRCONIUM ALLOYS
Physical Radiation Effects
Scientific conference proceedings. Session 2. Reactor materials, 12:20389 (R;CS;In Czech)
Reactor Materials
Scientific conference proceedings. Session 2. Reactor materials, 12:20389 (R;CS;In Czech)
ZIRCONIUM NITRIDES
Fracture Properties
Structural ceramics based on $Si_3N_4$—$ZrO_2$(+$Y_2O_3$) compositions, 12:20640 (J;US)
Phase Studies
Structural ceramics based on $Si_3N_4$—$ZrO_2$(+$Y_2O_3$) compositions, 12:20640 (J;US)
ZIRCONIUM OXIDES
Chemical Preparation
Synthesis of alumina-zirconia powders by sol-gel processing, 12:20630 (R;US)
Chemical Reaction Kinetics
Evolution of the nickel/zirconia interface, 12:20646 (BA;US)
Crystallization
Ion implanted precipitate microstructure and mechanical properties of ceramic surfaces, 12:20641 (J;US)
Damage
Recent damage results on high reflector coatings at 355 nm, 12:20883 (BA;US)
Recent damage results for antireflection coatings at 355 nm, 12:20884 (BA;US)
Deposition
Measurements of the dependence of damage thresholds on laser wavelength, pulse duration and film thickness, 12:20885 (BA;US)
Dielectric Properties
Recent damage results on high reflector coatings at 355 nm, 12:20883 (BA;US)
Recent damage results for antireflection coatings at 355 nm, 12:20884 (BA;US)

**Electron Microscopy**
Evolution of the nickel/zirconia interface, 12:20646 (BA;US)
**Fracture Properties**
Ion implanted precipitate microstructure and mechanical properties of ceramic surfaces, 12:20641 (J;US)
Structural ceramics based on $Si_3N_4$—$ZrO_2$(+$Y_2O_3$) compositions, 12:20640 (J;US)
**Ion Implantation**
Ion implanted precipitate microstructure and mechanical properties of ceramic surfaces, 12:20641 (J;US)
**Irradiation**
Measurements of the dependence of damage thresholds on laser wavelength, pulse duration and film thickness, 12:20885 (BA;US)
Recent damage results on high reflector coatings at 355 nm, 12:20883 (BA;US)
Recent damage results for antireflection coatings at 355 nm, 12:20884 (BA;US)
**Materials Testing**
Ceramic tritium breeder materials: Promise and performance, 12:20532 (R;US)
**Meetings**
Basic research in ceramic and semiconductor science at selected Japanese laboratories: Based on a September 1986 visit: Highlights, Summary and overview, Detailed notes from selected Japanese laboratories, 12:20631 (R;US)
**Morphology**
Evolution of the nickel/zirconia interface, 12:20646 (BA;US)
**Optical Properties**
Measurements of the dependence of damage thresholds on laser wavelength, pulse duration and film thickness, 12:20885 (BA;US)
Recent damage results on high reflector coatings at 355 nm, 12:20883 (BA;US)
Recent damage results for antireflection coatings at 355 nm, 12:20884 (BA;US)
**Phase Studies**
Structural ceramics based on $Si_3N_4$—$ZrO_2$(+$Y_2O_3$) compositions, 12:20640 (J;US)
**Temperature Effects**
Evolution of the nickel/zirconia interface, 12:20646 (BA;US)
**Thermal Conductivity**
Thermal conductivity of fusion solid breeder materials, 12:21965 (R;US)
**Vacuum Coating**
Recent damage results on high reflector coatings at 355 nm, 12:20883 (BA;US)
Recent damage results for antireflection coatings at 355 nm, 12:20884 (BA;US)

**ZOOPLANKTON**
**Population Dynamics**
Is the Somali Current a biological river in the Northwestern Indian Ocean?, 12:21127 (R;US)
**Species Diversity**
Is the Somali Current a biological river in the Northwestern Indian Ocean?, 12:21127 (R;US)

**ZT-40 DEVICES**
**Computerized Simulation**
Analysis of the effects of impurity buildup on the performance of a reversed field pinch: Final report, 12:21843 (R;US)
**Impurities**
Analysis of the effects of impurity buildup on the performance of a reversed field pinch: Final report, 12:21843 (R;US)

# CONTRACT NUMBER INDEX

Numbers assigned to DOE contracts under which documents announced in this publication were prepared are included in this index.

# REPORT NUMBER INDEX

The numbers assigned to reports cited in this publication appear in the first column of the index. Cross reference information and/or availability are included as appropriate. Abbreviations used in the availability column are elaborated at the end of the index. To expedite the filling of orders for reports from NTIS and OSTI, a file number in the form DE82000001 or TI82000001 appears in column 3. File numbers with DE prefixes may be used in ordering from both NTIS and OSTI. Numbers with TI prefixes are valid at OSTI only. Requesters are urged to use this file number where provided. In column 4, one or more DOE distribution categories are indicated, e.g., STD-10, MN-25. STD indicates distribution was made in full-size copy; MN indicates microcopy distribution; ND indicates no distribution was made. These category numbers are included to assist DOE librarians in responding to requests for reports in their collections. The UC (Unclassified Distribution Categories) are defined in DOE/TIC-4500, available from OSTI. The citation numbers are given in column 5. NOTE: DOE attempts to disseminate its information as broadly as possible. Even though a report may contain some degree of illegibility, it is believed that the report may still make a contribution. The presence of a 1, 2, or 3 following NTIS in the availability column denotes the document quality for microfiche (MF) and printed copy (PC) production: 1 = 92 to 95% legibility, available PC and MF; 2 = 88 to 91% legibility, available MF only; 3 = 87% or less legibility, available PC only. Employees of DOE or DOE contractors are urged to order from the Office of Scientific and Technical Information (OSTI); all others should order from the National Technical Information Service (NTIS).

# FILE NUMBER CORRELATION

This correlation list is provided for those organizations where document storage is alphanumeric by report number and request may be received by file number. For other information about a document (abstract number, distribution category, availability, and price), please refer to the Report Number Index.

# AVAILABILITY OF REFERENCES ABSTRACTED

## REPORTS

A document cited in this publication is considered a "report" when it carries a unique identifying number (e.g., ANL-3130, BNL-4000, DP-150, etc.) as the first element of the citation. Usually, one or more of the following abbreviations will appear at or near the end of the citation, indicating the organization from which the document is available. If none of these abbreviations appears, the report should be requested from either the cited publisher or corporate source.

GPO — Available from the Superintendent of Documents, U. S. Government Printing Office, Washington, DC 20402.

GPO Dep. — Available for inspection or interlibrary loan at GPO depository libraries. Unlimited DOE reports are being sent to the GPO depository libraries. See inside back cover for list of the libraries. These reports are identified by report number, Supt. of Docs. Class Number (E 1.99:) and OSTI accession/file number, e.g., DE87003384.

NTIS — For sale by the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, VA 22161. Paper copy (PC) and other price codes are for domestic users; prices for foreign purchasers are, in most instances, twice the domestic price. There is only one microfiche (MF) price code, MF A01 ($6.50).

OSTI — Available from the Office of Scientific and Technical Information (OSTI), U. S. Department of Energy, P. O. Box 62, Oak Ridge, TN 37831, Attn: Technical Information Division.

**NOTE:** DOE offices and contractors should order reports from OSTI; all others should order from NTIS. For additional information, see the introductory paragraph to the Report Number Index.

## NTIS NORTH AMERICAN PRICE CODES

Most NTIS products and services are now announced by price codes and, therefore, without specific prices in NTIS journals, newsletters, and indexes.

The current dollar equivalent for each code is shown in the schedule below. Orders must list the accession number(s) and be accompanied by the total dollar amount from the current schedule.

**NORTH AMERICAN CONTINENT PRICE SCHEDULE**

**Customers in Canada, United States, and Mexico, please use this price schedule; other addressees, write for PR-360-4.**

| MICROFICHE | | EXCEPTIONAL | | MAGNETIC TAPES | | DISKETTES | |
|---|---|---|---|---|---|---|---|
| A01 | $6.50 | E01 | $7.50 | T01 | $150.00 | D01 | $ 50 |
| PAPER COPY | | E02 | 10.50 | T02 | 175.00 | D02 | 75 |

## NON-REPORT DOCUMENTS

**BOOKS**

Most books cited are available from commercial publishers. Order from the publisher or other source as given, not from OSTI.

**CONFERENCE PAPERS**

Individual conference papers (or preprints) not available as reports should be requested from the originator or other source as cited.

**CONFERENCE PROCEEDINGS**

Many proceedings are available from commercial publishers; in other cases, request from the society, organization, institution, etc., cited as the source.

**DISSERTATIONS (THESES)**

Available from University Microfilms International, Dissertation Copies, P. O. Box 1764, Ann Arbor, MI 48106. Request by order number cited, e.g., 87-22,350.

**JOURNAL ARTICLES**

Users must use their own resources to obtain (or scan) articles cited—local, state, or university libraries or publishers, reprint services, etc.

**MONOGRAPHS**

Request from the organization, institution, society, etc., responsible for the monograph.

**PATENTS**

Although not cataloged as reports, patents cited from each country are listed in the Report Number Index under PATENTS-AU, PATENTS-FR, PATENTS-US, etc. U. S. Patent Applications (e.g., A 293,415) are available from NTIS.

# CODES USED ON INDEX LINES

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R;SU;RU). The language designator does not appear if the document is published in English.

## DOCUMENT TYPES

## DOE CURRENT AWARENESS BULLETINS

TIMELY INFORMATION FOR RESEARCHERS IN SPECIALIZED SUBJECT AREAS

To keep science, industry, the government, and the public up to date on worldwide energy literature, the DOE Office of Scientific and Technical Information publishes a series of Current Awareness Bulletins on various aspects of energy production and use. The information abstracted in these bulletins comes from scientific and technical reports, journal articles, conference papers and proceedings, patents, theses, books, and monographs. The semimonthly bulletins are:

ACID PRECIPITATION (PB87-901000) Wet and dry deposition, long-range transport, environmental effects, modeling, and socioeconomic factors.

BUILDINGS ENERGY TECHNOLOGY (PB87-900700) Technology required for economic energy conservation in buildings of all types.

COAL-BASED SYNFUELS (PB87-901400) Conversion of coal to gaseous or liquid fuels.

COAL COMBUSTION AND UTILIZATION (PB87-914400) All aspects of coal combustion and direct utilization, including fluidized-bed combustion, MHD generators, and coal fuel cells.

COAL PREPARATION AND POLLUTION CONTROL (PB87-900800) Coal cleaning and the technology of reducing air pollution from the direct combustion of coal.

DIRECT ENERGY CONVERSION (PB87-946600) Photovoltaic conversion, magnetohydrodynamics, electrohydrodynamics, thermoelectric generators, thermionic converters, fuel cells, etc.

ENERGY FROM BIOMASS (PB87-900600) Biomass production, conversion, and use for energy.

GEOTHERMAL ENERGY TECHNOLOGY (PB87-914700) Technology required for economic recovery of geothermal energy and its use, either directly or to produce electricity.

HEAVY-ION REACTIONS (PB87-900500) All aspects of heavy-ion ($A > 4$) reactions.

LASER RESEARCH (PB87-901100) Research and development, excluding applications.

NUCLEAR FUEL CYCLE (PB87-913400) Uranium reserves, ore exploration, mining, processing, and enrichment; spent-fuel reprocessing; nuclear materials management and safeguards; nuclear fuel fabrication and properties; and environmental and health and safety aspects.

NUCLEAR REACTOR SAFETY (PB87-913500) Accident analysis, safety systems, radiation protection, decommissioning and dismantling, and security measures.

RADIOACTIVE WASTE MANAGEMENT (PB87-902900) Spent-fuel transport and storage, radioactive effluents from nuclear facilities, techniques of processing radioactive wastes, and ultimate disposal of the wastes.

SOLAR THERMAL ENERGY TECHNOLOGY (PB87-901200) Research and development relating to the use of solar thermal systems as a significant energy source.

TRANSPORTATION ENERGY RESEARCH (PB87-900900) Engineering and design of energy-efficient automotive propulsion systems and all aspects of energy conservation in transportation.

UNCONVENTIONAL PETROLEUM (PB87-901300) Secondary and tertiary recovery of petroleum and oil shales and tar sands.

Bulletins are available by subscription from the National Technical Information Service, U. S. Department of Commerce, Springfield, VA 22161. Subscription rates for one year (24 issues) are $80.00 for domestic subscribers and $160.00 for subscribers outside the United States, Canada, and Mexico. Use the order number given in parentheses after the bulletin title.

# FEDERAL DEPOSITORY LIBRARY PROGRAM

As a result of an agreement between the U. S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are *not* sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.
